Proceedings - 5th International Conference on Computer and Communication Engineering: Emerging Technologies via Comp-Unication Convergence, ICCCE 2014

4 February 2015, Article number 7031594, Pages 36-39

5th International Conference on Computer and Communication Engineering, ICCCE 2014; Sunway Putra Hotel Kuala Lumpur; Malaysia; 23 September 2014 through 24 September 2014; Category number E5413; Code 110844

Parameter optimization for piezoelectric micro-energy harvesting system

(Conference Paper)

Abstract

[View references \(5\)](#)

A piezoelectric micro-energy harvesting system is composed of piezoelectric transducer, rectifier, DC to DC converter and storage device. Parameters of the DC to DC converter have been optimized to harvest maximum energy from piezoelectric transducer. The key parameters are switching frequency, duty cycle, output load and inductance have been studied. The input voltage of the circuit from the piezoelectric transducer of 0.3V AC amplitude and output DC load voltage of 1.91V are considered. The circuit has been simulated using PSpice (V16.5) electronic circuit simulation software. The results show that the efficiency of the energy harvesting circuit is 34% and the maximum output power across the load is 3.69mW. © 2014 IEEE.

Author keywords

DC to DC converter micro-energy harvesting piezoelectric transducer

Indexed keywords

Engineering controlled terms:	Computer software	DC-DC converters	Electric rectifiers	Energy harvesting
	HVDC power transmission	Piezoelectricity	SPICE	Transducers
				Virtual storage

DC load

DC-to-DC converters

Duty-cycle

Input voltages

Maximum output power

Micro energy

Output load

Parameter optimization
