#### Background

Although, breast feeding is the best way to feed infant by providing the psychological and health benefit to mother and child, prevalence of practicing exclusive breastfeeding (EBF) for 6months and continuing it up to 2-years varies between countries and within countries from 75% in DPR Korea, Seri Lanka, Cambodia and the Solomon Islands, around half in India and less than 20% were in Thailand and Viet Nam<sup>1</sup>. In Malaysia, national EBF rate in 2011 was 23.7%<sup>2</sup>.

#### Objectives

Aim of this study was to assess maternal knowledge, attitude and practices on exclusive breastfeeding and continuing it up to 2 years including its influencing factors and reasons for discontinuation of breast feeding before 2-years.

## Methods

A cross sectional descriptive and analytical study was carried among 500 mothers of children aged from neonate to 3 years who attended at Maternal and Child Care Clinic, Temeloh, Pahang between July and December 2012. A face-to-face interview was done by using a semi-structured, pre-tested questionnaire including opened type questions to collect data. A cross analysis was done to infer statistical significance of influencing factors which affect pattern of breast feeding in terms of age, occupation, educational level of mother and socio- economic status of family.

Table-I: Maternal Knowledge on Breast Feeding

Table-2: Maternal Attitude on Breastfeeding

Table-3: Maternal Practices on Breastfeeding

Knowledge on Breastfeeding	Yes(%)	Mate

#### Discussion & Conclusion

- Exclusive breastfeeding rate of Temerloh, Pahang was higher than that of National figure . Nevertheless, need to find out the ways to supports mothers to get higher achievement. Favorable working conditions for maternity leave with full pay or longer post natal leave and preparing a proper place or rooms for breast feeding during working hours should be considered.
- Though they are knowledgeable about breast feeding, and good attitude towards breast feeding, the other reasons which influenced on discontinuing breast feeding should be clarified in further study to get more understanding on mothers who are unable to comply exclusive breastfeeding and continuing it up to 2 years of their children.
