ISCAIE 2018 - 2018 IEEE Symposium on Computer Applications and Industrial Electronics

5 July 2018, Pages 179-184

2018 IEEE Symposium on Computer Applications and Industrial Electronics, ISCAIE 2018; Penang Island; Malaysia; 28 April 2018 through 29 April 2018; Category number CFP1889L-ART; Code 137787

Cloud denial of service detection by dendritic cell mechanism

(Conference Paper)

Abstract

[View references \(23\)](#)

The term cloud computing is not new anymore in computing technology. This form of computing technology previously considered only as marketing term, but today cloud computing not only provides innovative improvements in resource utilization but it also creates a new opportunities in data protection mechanisms where the advancement of intrusion detection technologies are blooming rapidly. From the perspective of security, cloud computing also introduces concerns about data protection and intrusion detection mechanism especially cloud computing are exposed to Denial of Service (DoS) attacks. This paper aims to provide DoS detection mechanism for cloud computing environment. As a result, we provide an experiment to examine the capability of the proposed system. The result shows that the proposed system was able to detect DoS attacks that conducted during the experiment with 94.4% detection rate. We conclude the paper with a discussion on the results, then we include together with a graphical summary of the experiment's result. © 2018 IEEE.
