Proceedings of the 2018 7th International Conference on Computer and Communication Engineering, ICCCE 2018
16 November 2018, Article number 8539342, Pages 453-458
7th International Conference on Computer and Communication Engineering, ICCCE 2018; Kuala Lumpur; Malaysia; 19 September 2018 through 20 September 2018; Category numberCFP1839D-USB; Code 142740

Convolutional Neural Network-based Finger Vein Recognition using Near Infrared Images (Conference Paper)

Abstract

View references (17)

Convolutional Neural Network (CNN) is opening new horizons in biometrics-based authentication field and finger vein recognition is the prominent one which can provide the best possible security system depending on this aforementioned technology. In this paper, we used 5 convolutional layers and 4 fully-connected layers where our developed network has shown the capability to produce the result with almost 100% accuracy rate which became possible due to the fact that deep learning, an end-to-end system is used which performs better in a lot of aspects in comparison to conventional techniques. © 2018 IEEE.

SciVal Topic Prominence

Topic: Biometrics | Feature extraction | finger-vein recognition

Prominence percentile: 88.107

Author keywords

Biometric Convolutional neural network Deep learning Energy security Finger vein recognition NIR

Indexed keywords

Engineering controlled terms: Biometrics Convolution Deep learning Energy security Infrared devices Infrared imaging Neural networks

Engineering uncontrolled terms: Accuracy rate Conventional techniques Convolutional neural network Convolutional Neural Networks (CNN) End-to-end systems Finger - vein recognition Fully-connected layers Near - infrared images

Engineering main heading: Palmprint recognition
