2018 IEEE 5th International Conference on Engineering Technologies and Applied Sciences, ICETAS 2018

28 January 2019, Article number 8629168

5th IEEE International Conference on Engineering Technologies and Applied Sciences, ICETAS 2018; AIT Conference Center Bangkok; Thailand; 22 November 2018 through 23 November 2018; Category number CFP18N08-ART; Code 144743

Factors Affecting Secure Software Development Practices among Developers-An Investigation (Conference Paper)

Abstract

View references (20)

An evidently dominant problem in the software development domain is that software security is not consistently addressed from the initial phase of software development which escalates security concerns, results in insecure software development. Several secure software development methodologies were introduced in literature and recommended to the industry but they are usually ignored by the developers and software practitioners. In this research paper, an extensive literature review is performed to find out factors influencing implementation of secure software development practices in industry. Secondly, Based on Unified Theory of Acceptance and Use of Technology model 2 (UTAUT2), this study proposes a model to investigate the factors influencing adoption of secure software development practices among software developers. © 2018 IEEE.

SciVal Topic Prominence

Topic: Software engineering | Models | security requirement

Prominence percentile: 87.068

Author keywords

behavioral intention influencing factors secure software development software security UTAUT2

Indexed keywords

Engineering controlled terms: Engineering Industrial engineering

Engineering uncontrolled terms: Behavioral intention influencing factors Secure software development Software security UTAUT2

Engineering main heading: Software design
