

KoE Leading the Way...

SCHOLARLY PUBLICATIONS

Siti Azizah Md Nor
Senior Librarian | Liaison for KoE

Presentation Outline

Today's Agenda

- Publication
- IREP
- Researcher Profile
- Research impact measurement
- Predatory journal

Scholarly publication is...

the published results of researchers who have gained new knowledge in her or his discipline by the means of scientific theories and methods.

A person wearing a bright yellow jacket stands on a dark, rocky outcrop. The background is a vast, dark night sky filled with numerous stars, creating a sense of depth and wonder. The overall mood is contemplative and scientific.

...usually consist of
journal articles,
research reports,
conference papers, and
books.

...earlier research is
used as a point of
departure but is
critically investigated
and developed further

Research Lifecycle

**share your research
with others...**

The number of papers published is important, however the number of times the work is cited is more important because it indicates the impact that the research has on the field

STEPS TO BEGIN

STEP 1

Depositor
create new
item and
upload
research
output

STEP 2

Approver verify
and edit
metadata in
IREP database

STEP 3

Approver
approve and
publish the
digital content
online

IIUM Institutional Repository (IREP)

...digital repository of documents and scholarly output of IIUM staff encompassing various subjects and disciplines. The documents include journal articles, chapter/section of a book, book and conference papers.

The screenshot shows the IIUM Institutional Repository (IREP) website. At the top, there is a navigation bar with links: [Browse by Subject](#), [Browse by Kulliyahs/Divisions/Centres/Institutes](#), and [Browse by A](#). Below this is a secondary navigation bar with links: [Manage deposits](#), [Statistics](#), [Manage records](#), [Saved searches](#), [Review](#), [Admin](#), and [Logout](#). The main content area features a green banner with a checkmark icon and the text "Welcome to IIUM Repository (IREP)". To the right of the banner is an "Atom" feed icon. Below the banner are several sections: "Latest Additions" with a link and the text "View items added to the repository in the past week."; "Search Repository" with a link and the text "Search the repository using a full range of fields. Use the search field at the top of the page for a q"; "Browse Repository" with a link and the text "Browse the items in the repository by subject."; "About this Repository" with a link and the text "More information about this site."; and "Repository Policies" with a link and the text "IIUM Repository (IREP) Policy".

TOTAL : 8814

THE NEED FOR IREP

 long term preservation and storage

 facilitates knowledge transfer

 promote research linkages/partnerships

 chances of getting cited and increase citation

 link to CV online

 assist with the compilation of publications for internal and external research quality assurance measures

 promote and provide wider dissemination of access to research and scholarly output

 Outputs will be exposed to search engines thus increase visibility and accessibility of publications to the outside world

Search and Discover Malaysian Academic Library Information Resources : Institutional Repository

and Researchers

Researcher Profile

*How can it maximize your research
impact and presents you to the
world*

What is a Researcher Profile

An individual internet profile that provide a user friendly & efficient way of showcasing your work.

Having a unique profile:

- ✓ Shows your work to the world
- ✓ Manages your publications list
- ✓ Helps to be identified by potential collaborators
- ✓ Helps to avoid misidentification
- ✓ Tracks citation counts
- ✓ Enhances your researcher profile page by including a link to other profiles

Why create Researcher Profile?

- ✓ Researchers want to find potential collaborators, and want an easier way to get credit for their scholarly activities
- ✓ Institutions want to collect, showcase and evaluate the scholarly activities of their faculty
- ✓ Publishers want to simplify the publishing workflow
- ✓ Funding organizations want to simplify the grant submission and want to track what happened to the research they funded
- ✓ Scholarly societies want an easier way to track the achievements of their members

Use hashtag (#) in social media...

Tweet on a variety of subjects or share via Facebook: Research publications, findings, opinions on a study, news or blogposts relevant to your topics of interest, recent developments in your field

The hashtag (#) is the most widely used means of classifying content on social media:

Content searchable, connect and engage with other social media users based on a common interest

#co-authors

What is journal IMPACT?

IMPACT - based on number of citation

High **Impact** means high **Citation**

How are journals ranked?

By number of **citations** each journal receive and compared with a similar field

How to determine quartile Q?

For example:

- Multidisciplinary Sciences
- 55 journals
- journal with impact factor

Top 25 % (rank 1-14) - Q1

26-50 % (rank 14-28) - Q2

51-75 % (rank 29-42) - Q3

76-100 % (rank 43-56) - Q4

Social Science Journals in WoS Q1, Q2, Q3 and
Q4- Total: 3312 Journals

Q1 – 867 Journals

Science Journal in WoS – Q1, Q2, Q3 and Q4
Total: 12298

Journals Q1 – 2461 Journals

How to find WoS Journals?

RESEARCH IMPACT MEASUREMENT

Research impact is often measured using quantitative methods such as citation counts, the h-index, and journal impact factor

Scholarly impact measured by:

- Journal
- Article
- Author

Citation database allows you to create a Citation Report and calculate an h-index.

Focus on journal impact to select high- impact journals for submission

Clarivate Analytics
~12,000 journal

SCIMAGO Journal Rank
Indicator (SJRI)

Q1

Q2

Q3

Q4

SCOPUS Q - Not for
MyRA

* Only WoS publish - Impact Factor

WoS – Impact factor (only WoS can use IF)

$$\text{Impact factor 2018} = \frac{\text{No. of citation in 2018 for papers published in 2016 and 2017}}{\text{No. of paper published in 2016 and 2017}}$$

SCOPUS - Scimago Journal Rank Indicator -SJRI

Add a little bit of body text

The calculation of the final prestige of a journal is an iterative process, in which the prestige in the stage i of a journal depends on the prestige of the set of journals in stage $i-1$.

Add a little bit of body text

$$SJR_i = \frac{(1-d-e)}{N} + e \cdot \frac{Art_i}{\sum_{j=1}^N Art_j} + d \cdot \sum_{j=1}^N \frac{C_{ji} \cdot SJR_j}{C_j} \cdot \frac{1 - \left(\frac{\sum_{k \in \{Dangling\text{-nodes}\}} SJR_k}{\sum_{k=1}^N \sum_{l=1}^N \frac{C_{kl} \cdot SJR_k}{C_k}} \right)}{\sum_{k=1}^N \sum_{l=1}^N \frac{C_{kl} \cdot SJR_k}{C_k}} + d \cdot \left[\frac{\sum_{k \in \{Dangling\text{-nodes}\}} SJR_k}{\sum_{j=1}^N Art_j} \right] \cdot \frac{Art_i}{\sum_{j=1}^N Art_j}$$

$$SJRQ_i = \frac{SJR_i}{Art_i}$$

An index to quantify an individual's scientific research output

J. E. Hirsch*

Department of Physics, University of California at San Diego, La Jolla, CA 92093-0319

Communicated by Manuel Cardona, Max Planck Institute for Solid State Research, Stuttgart, Germany, September 1, 2005 (received for review August 15, 2005)

I propose the index h , defined as the number of papers with citation number $\geq h$, as a useful index to characterize the scientific output of a researcher.

citations | impact | unbiased

For the few scientists who earn a Nobel prize, the impact and relevance of their research is unquestionable. Among the rest of us, how does one quantify the cumulative impact and relevance of an individual's scientific research output? In a world of limited resources, such quantification (even if potentially distasteful) is often needed for evaluation and comparison purposes (e.g., for university faculty recruitment and advancement, award of grants, etc.).

The publication record of an individual and the citation record clearly are data that contain useful information. That information includes the number (N_p) of papers published over n years, the number of citations (N_c) for each paper (i), the journals where the papers were published, their impact parameter, etc. This large amount of information will be evaluated with different criteria by different people. Here, I would like to propose a single number, the "h index," as a particularly simple and useful way to characterize the scientific output of a researcher.

A scientist has index h if h of his or her N_p papers have at least h citations each and the other ($N_p - h$) papers have $< h$ citations each.

The research reported here concentrated on physicist's how.

h -index paper

- (i) Total number of papers (N_p). Advantage: measures productivity. Disadvantage: does not measure importance or impact of papers.
- (ii) Total number of citations ($N_{c,tot}$). Advantage: measures total impact. Disadvantage: hard to find and may be inflated by a small number of "big hits," which may not be representative of the individual if he or she is a coauthor with many others on those papers. In such cases, the relation in Eq. 1 will imply a very atypical value of α , > 5 . Another disadvantage is that $N_{c,tot}$ gives undue weight to highly cited review articles versus original research contributions.
- (iii) Citations per paper (i.e., ratio of $N_{c,tot}$ to N_p). Advantage: allows comparison of scientists of different ages. Disadvantage: hard to find, rewards low productivity, and penalizes high productivity.
- (iv) Number of "significant papers," defined as the number of papers with $> y$ citations (for example, $y = 50$). Advantage: eliminates the disadvantages of criteria i, ii, and iii and gives an idea of broad and sustained impact. Disadvantage: y is arbitrary and will randomly favor or disfavor individuals, and y needs to be adjusted for different levels of seniority.
- (v) Number of citations to each of the q most-cited papers (for example, $q = 5$). Advantage: overcomes many of the disadvantages of the criteria above. Disadvantage: It is not a single number, making it more difficult to obtain and compare. Also, q is arbitrary and will randomly favor and disfavor individuals.

h-index

•KEEP IN MIND THAT DIFFERENT DATABASES WILL GIVE DIFFERENT VALUES FOR THE H-INDEX.

THIS IS BECAUSE EACH DATABASE MUST CALCULATE THE VALUE BASED ON THE CITATIONS IT CONTAINS. SINCE DATABASES COVER DIFFERENT PUBLICATIONS IN DIFFERENT RANGES OF YEARS, THE H-INDEX RESULT WILL THEREFORE VARY.

YOU SHOULD ALSO KEEP IN MIND THAT WHAT IS CONSIDERED A "GOOD" H-INDEX MAY DIFFER DEPENDING ON THE SCIENTIFIC DISCIPLINE. A NUMBER THAT IS CONSIDERED LOW IN ONE FIELD MIGHT BE CONSIDERED QUITE HIGH IN ANOTHER FIELD.

Predatory Journals

Predatory Journals take advantage of author's by asking them to publish for a fee without providing peer-review or copy editing. High quality academic journals take longer to publish articles because they go through a proper peer review and copy editing process.

6 ways to identify predatory journal publisher

- The journal does not identify a formal editorial/review board.
- The publisher has no policies or practices for digital preservation.
- The publisher begins operations with a large fleet of journals, often using a template to quickly create each journal's home page.
- The publisher provides insufficient information or hides information about author fees,
- The name of a journal does not adequately reflect its origin.
- The journal falsely claims to have an impact factor.

refer to Beall's List of Predatory Journals and Publishers for a list of
potential predatory publishers via
