

Como se ve en la figura, casi todas las nuevas variables, seguras posibles se encuentran bien fuera del numeroso cuerpo de variables hasta ahora conocidas en  $\omega$  Cen.

A careful study of a región of  $2^\circ \times 2^\circ$  centered on the cluster resulted in the discovery of 10 new variables and 5 probable variables.

## SOUTHERN SUPERGIANTS

William Buscombe

(Mount Stromlo Observatory, Australian National University  
Observatorio Astronómico, Universidad Nacional de Córdoba)

A catalog is in preparation, which will bring together available information on radial velocities, spectral classes, colour excesses and distances, with new galactic co-ordinates, for stars more luminous than absolute magnitude  $-4$ .

The list will soon be available as a Mimeogram from Mount Stromlo Observatory.
