Contents

		the Second Edition	xii
- 2		the First Edition	xiv
List	of Con	tributors	XV
1	Intro	duction	1
	John	S. Lucas	
	1.1	What is aquaculture?	1
	1.2	Origins of aquaculture and agriculture	2
	1.3	Aquaculture and capture fisheries production	4
	1.4	The 'Blue Revolution'	6
	1.5	An allegory	11
	1.6	Diversity of aquaculture	12
	1.7	Stock enhancement	12
	1.8	New developments in aquaculture	14
	1.9	Conclusions	16
		References	17
2	Gene	eral Principles	18
	Peter	Appleford, John S. Lucas and Paul C. Southgate	
	2.1	Introduction	18
	2.2	Structures used for aquaculture	18
	2.3	Intensity of aquaculture	26
	2.4	Static, open, semi-closed and recirculating (closed) systems	32
	2.5	Plumbing and pumps	37
	2.6	Site selection and development	42
	2.7	Hatchery systems	44
	2.8	Selecting a new species for culture	46
	2.9	Developing a new cultured species	48
		References	50
3	Wate	r Quality	52
	Claud	de Boyd	
	3.1	Introduction	52
	3.2	Water quality variables	52
	3.3	Effects of water quality on culture species	62
	3.4	Water quality management	68
	3.5	Efficients	90

vi Contents

	3.6	Summary	81
		References	82
4	Envir	onmental Aspects	84
	Marti	n Kumar and Simon Cripps	
	4.1	Public image	84
	4.2	Impacts from land-based aquaculture	85
	4.3	Impacts of aquaculture within large water bodies	91
	4.4	General impacts on the environment	93
	4.5	Impact assessment	99
	4.6	Integrated wastewater treatment and aquaculture	101
	4.7	Integrated resource management	103
	4.8	Conclusions	104
		References	105
5	Deser	t Aquaculture	107
	Inland	l: Sagiv Kolkovski, Yitzhak Simon and Gideon Hulata	
	Coast	al: Sagiv Kolkovski and Nasser Ayaril	
	5.1	Introduction	107
	5.2	The Israeli experience	108
	5.3	Regional variation in Israel	108
	5.4	Aquaculture in geothermal water	108
	5.5	Water-limited aquaculture	112
	5.6	Indoor aquaculture facilities	116
	5.7	Desert coastal aquaculture technology - the Saudi Arabian experience	116
	5.8	Brine shrimp (Artemia sp.) production in Western Australia	120
	5.9	Species for water-limited aquaculture	121
	5.10	Conclusions and future directions	123
		References	124
6	Repro	duction, Life Cycles and Growth	126
	John .	S. Lucas and Paul C. Southgate	
	6.1	Introduction	126
	6.2	Reproductive physiology	126
	6.3	Life cycles	129
	6.4	Growth	133
	-	References	137
7	Genet	ics	138
	Rex D	unham	
	7.1	Introduction	138
	7.2	Basic genetics	138
	7.3	Domestication and strain evaluation	140
	7.4	Selection	141
	7.5	Inbreeding and maintenance of genetic quality	145
	7.6	Crossbreeding and hybridization	145
	7.7	Chromosomal techniques	149
	7.8	Molecular and genomic techniques	155
	7.9	Future developments	161

8	Nutrition		164
		De Silva, Giovanni Turchini and David Francis	
	8.1	Introduction	164
	8.2	Feed intake, digestion and nutrient absorption	165
	8.3	Nutritional requirements	166
	8.4	Types of feed	177
	8.5	Selecting feed ingredients and formulation	180
	8.6	Feed management	181
	8.7	Major feed-related issues confronting the aquaculture sector	182
	8.8	Conclusions	186
		References	186
9	Foods	and Feeding	188
	Paul (C. Southgate	
	9.1	Introduction	188
	9.2	Foods for hatchery culture systems	188
	9.3	Microalgae	188
	9.4	Zooplankton	194
	9.5	Feeding strategy for larval culture	199
	9.6	Compound hatchery feeds	200
	9.7	Development of artificial diets for fish larvae	201
	9.8	Harvesting natural plankton	202
	9.9	Pond fertilisation as a food source for aquaculture	202
	9.10	Compound feeds	204
	9.11	Dispensing aquaculture feeds	210
		References	212
10	Diseas	ses	214
	Leigh	Owens	
	10.1	Introduction	214
	10.2	General principles of diseases in aquaculture	214
	10.3	The philosophy of disease control	216
	10.4	Generalised disease management techniques	217
	10.5	Major diseases	220
	10.6	Conclusions	228

Preface to the Second Edition

The rapid growth of aquaculture continues at a faster rate than predicted a decade ago. Total global production by 2007 had increased by two-thirds over the production reported in the first edition of this book. This has been possible because of new technical developments, rapid expansion of some new and existing industries, and diversification in the species utilised by aquaculture. These exciting developments provide the basis for this second edition, which includes a major revision of production statistics and chapter contents, seven new chapters and a more diverse international authorship and coverage. There are contributors from 12 countries, and aquaculture in many more countries is considered. With the increasing importance of China as the major source of aquaculture products, there is greater consideration of aquaculture in that country. There are three new Chinese authors contributing to this edition. Sadly, Professor C. K. Tseng, who contributed Macroalgae in the first edition, is now deceased. He is considered to be the 'father of Chinese mariculture' for his great achievements in marine science and outstanding leadership in that country over many years.

We express our sincere gratitude to the authors for their commitment in contributing chapters and, in some cases, for their understanding and patience. We also express our gratitude to our wives, Helen and Dawn, for their contributions and support. We trust that you will find this new edition both helpful and stimulating.

> John S. Lucas Paul C. Southgate June 2011

Preface to the First Edition

This textbook seeks to convey to its readers the contributors' enthusiasm for aquaculture and their accumulated knowledge. The contributors are recognised internationally in their fields. While it is not possible to comprehensively cover the ranges of aquaculture theory, practices and cultured organisms in one textbook, it is our earnest hope that this text will give readers a broad understanding of these topics.

The first part of the text introduces aquaculture with a series of 'theory and practice' topics, ranging from traditional topics such as ponds and pumps to contemporary environmental issues, nutrition physiology and genetic engineering. The second part of the text consists of chapters dealing with specific organisms, or groups of organisms, which illustrate the variety of culture methods used in aquaculture. It also provides examples of biological and other factors that make these organisms suitable for culture. The aquatic animals and plants treated in the text are but a small proportion of the hundreds of commer-

cially cultured species; however, they constitute the most significant commercial components of world aquaculture production. They include the four major groups of cultured organisms – fish, crustaceans, bivalve molluscs and seaweeds; the three broad categories of aquatic environments – fresh, brackish and seawater; and the broad latitudinal zones – temperate, subtropical and tropical regions.

We express our sincere gratitude to the authors for their commitment in contributing chapters and, in some cases, for their understanding. Mr Michael New, President, European Aquaculture Society, Past-President, World Aquaculture Society, kindly assisted by reviewing Chapters 1 and 23. We also wish to express our gratitude to our wives, Helen and Dawn, for their substantial contributions.
