FEEDING RECORDS OF APHIDS (HEMIPTERA: APHIDIDAE) FROM WISCONSIN

Andrew H. Williams¹, James C. Trager² and David J. Voegtlind³

ABSTRACT

Basic to our understanding of any animal and its habitat requirements is knowing what it eats. Reported here are observations of feeding by 27 species of aphids encountered in Wisconsin over 1992-2002.

Knowing what an animal eats is basic to our understanding of that animal and its habitat requirements. Reported here are observations of feeding by 27 species of aphids (Hemiptera: Aphididae) collected in Wisconsin by Williams from 1992 through 2002.

Aphids were reared in the lab on the same plant species on which they had been found feeding so that both wingless and winged adults could be secured. These were put into 80% EtOH and sent to Voegtlind, who mounted the aphids on slides, determined them and deposited the specimens in the collection at Illinois Natural History Survey. Ants tending the aphids were collected, point mounted and sent to Trager or A. Francouer, who determined them and returned them for deposition in the Insect Research Collection (IRC) of the Entomology Department at University of Wisconsin - Madison. Predators of aphids were collected, immatures reared out on those same aphids in the lab and adult specimens deposited in the IRC.

These aphid data are presented in Table 1. Unless otherwise noted in the table, all insects were collected by Williams in prairies and savannas, all plants and aphid predators were determined by Williams, and all ants were determined by Trager. Plant nomenclature follows Gleason and Cronquist (1991).

ACKNOWLEDGMENTS

Williams' prairie insect research over 1992-2002 was supported, in part, by grants from The Prairie Enthusiasts - Southwest Chapter, Citizens Natural Resources Association of Wisconsin, Lois Almon Small Grants Program, Natural History Museums Council of UW - Madison, The Nature Conservancy, the Cooperative Prairie Insect Project administered by Wisconsin Department of Natural Resources and supported by a grant from U. S. Fish and Wildlife Service Partnership for Wildlife Grant Program, and several private donors, support for which he is most grateful. Many individuals were in other ways supportive of this aphid research, notably: M. Anderson, M. Black, A. Blattner, C. M. Brabant, R. Christoffel, J. C. Dunford, G. Eldred, L. A. Ferge, A. Francoeur, J. P. Gruber, G. Johnson, J. L. Kaspar, K. R. Katovich, S. J. Krauth, N. L. Kriska, D. LeDoux, A. E. Lisberg, D. L. Mahr, B. Mandernack, J. Maxwell, M. & R. Norman, C. Ontl, P. J. Pellitteri, U. Petersen, M. B. Price, A. S. Ramsdale, J. & R. Sime, S. L. Statz and M. Ulrich. This work simply could not have been done without the help of E. Y. Williams and D. K. Young.

Table 1. Observations of aphids feeding on plants, ants tending those aphids and aphid predators.

| Aphid | Plant | Ant | Notes |
|---|--|--|---|
| <i>Aphis barberae</i> Robinson | <i>Cirsium discolor</i> | <i>Formica subsericea</i> Say | Crowded under flower buds at tip of stem. |
| <i>Aphis craccivora</i> Koch | <i>Astragalus canadensis</i> | — | On stems & developing pods, by road at edge of rocky woods. |
| <i>Aphis decepta</i> Hottes & Frison | <i>Heracleum lanatum</i> | <i>Camponotus noveboracensis</i> (Fitch) | On stems & on small stems under umbels. |
| | <i>Pastinaca sativa</i> | <i>Formica montana</i> Emery | On stem below umbel. |
| <i>Aphis monardae</i> Oestlund ¹ | <i>Pycnanthemum virginianum</i> | <i>Crematogaster lineolata</i> (Say) | On stems near shoot tips. |
| | <i>Monarda fistulosa</i> | <i>Formica montana</i> Wheeler ² | On young leaves. |
| | <i>Monarda fistulosa</i> | <i>Formica prociliata</i> Kennedy & Dennis | On young leaves. |
| | <i>Monarda fistulosa</i> | <i>Formica subsericea</i> Say | On youngest leaves. |
| <i>Aphis rumicis</i> Linnaeus | — | — | Aggregated on shoot tip & youngest leaves. |
| <i>Aphis sanguinaliae</i> Williams | <i>Rumex orbiculatus</i> | — | |
| | <i>Zizia aurea</i> | — | |
| <i>Aphis solanella</i> Theobald | <i>Lasius alienus</i> (Foerster) | | In tight clusters on stems near their tips & just below flowering umbels. |
| | <i>Cirsium discolor</i> | | |
| | <i>Solanum nigrum</i> | | |
| <i>Brachycaudus cardui</i> (Linnaeus) | <i>Formica montana</i> Wheeler | On shoot tips. | |
| | <i>Onosmodium molle</i> | On young stems & leaves near shoot tips. | |
| | <i>Onosmodium molle</i> | | |
| <i>Chaitophorus nigrae</i> Oestlund | <i>Dolichoderus taschenbergi</i> (Mayr) ² | On tender leaves. | |
| | <i>Salix</i> sp. | On young stems, leaves, flowers & flower buds. | |
| | | On petioles & undersides of leaves. | |

Table 1. Continued.

| Aphid | Plant | Ant | Notes |
|--|---------------------------------|---|---|
| <i>Cinara banksiana</i> Pepper & Tissot | <i>Pinus banksiana</i> | — | On spherical stem nodules shielded by fragile husks & tended by ants that escaped capture. |
| <i>Hoplochaitophorus quercicola</i> Monell | <i>Quercus macrocarpa</i> | <i>Formica obscuripes</i> Forel | On midveins of undersides of leaves. |
| <i>Hysteroneura setariae</i> (Thomas) | <i>Prunus americana</i> | <i>Crematogaster cerasi</i> (Fitch) | On youngest leaves, deforming them. |
| | <i>Panicum oligosanthes</i> | <i>Formica subsericea</i> Say | In dense clusters on upper stems & inside panicle among spikelets. |
| <i>Lachnus allegheniensis</i> McCook | <i>Quercus macrocarpa</i> | <i>Formica obscuripes</i> Forel | On young brown bark of knee-high oak. When disturbed, the aphids walked down branch & trunk toward grassy litter below. |
| <i>Microparsus olivei</i> Smith & Tuatay | <i>Desmodium illinoense</i> | <i>Coccinella septempunctata</i> Linnaeus, near shoot tip. | Prey of adult <i>Coccinella septempunctata</i> Linnaeus, near shoot tip. |
| | <i>Desmodium illinoense</i> | — | On young lomentes. |
| <i>Myzus cerasi</i> (Fabricius) | <i>Prunus pensylvanica</i> | <i>Formica subnitens</i> Creighton | On shoot tips & undersides of youngest leaves. |
| <i>Uroleucon ambrosiae</i> (Thomas) | <i>Silphium perfoliatum</i> | — | On shoot tips & youngest leaves. |
| <i>Uroleucon eupatoricola</i> (Patch) | <i>Eupatorium sessilifolium</i> | — | On shoot tip & on branches of inflorescence bearing buds, by road at edge of rocky woods. |
| <i>Uroleucon gigantiphagum</i> Moran | <i>Solidago gigantea</i> | — | Prey of larval <i>Chrysoperla ploribunda</i> (Fitch), |

Table 1. Continued.

| Aphid | Plant | Ant | Notes |
|---|-----------------------------------|--|-------|
| <i>Uroleucon gravicornis</i> (Patch) | — | (reared), on stem and among flowers. | |
| <i>Eriigeron strigosus</i> | — | Prey of adult <i>Coccinella septempunctata</i> | |
| <i>Uroleucon helianthicola</i> (Olive) | <i>Froelichia floridana</i> | Linnaeus, on stem. | |
| <i>Uroleucon leonardi</i> (Olive) | <i>Forelius pruinosus</i> (Roger) | On stems near inflorescences. | |
| <i>Uroleucon luteolum</i> (Williams) | <i>Ratibida pinnata</i> | Prey of adult <i>Podabrus tomentosus</i> (Say) ³ , on upper stem. | |
| <i>Solidago canadensis</i> | — | On shoot tip. | |
| <i>Uroleucon obscuricaudatum</i> (Olive) | <i>Helopsis helianthoides</i> | On stems below flowers, by road at edge of rocky woods. | |
| <i>Uroleucon pepperi</i> (Olive) | <i>Cirsium discolor</i> | On stems below flower buds. | |
| <i>Uroleucon pieloui</i> (Richards) | <i>Solidago canadensis</i> | Prey of adult <i>Coccinella septempunctata</i> | |
| <i>Helenium autumnale</i> | — | Linnaeus, on stem tip. | |
| <i>Uroleucon zinzalae</i> Hottes & Frison | <i>Polymnia canadensis</i> | On stem tips. | |
| | — | On young tissues, by road at edge of rocky woods. | |

¹We disagree with the placement of *A. monardae* as a synonym of *A. gossypii* which was made on the basis of the morphology of a small number of slide mounted specimens.

²Determined by A. Francoeur.

³Determined by D. K. Young.
