This *Annual Report on Sunspot Counting Program 2018* has been compiled by A. J. P. Aparicio, N. Bravo-Paredes, V. M. S. Carrasco, and J. M. Vaquero.

Introduction

This program was born in late 2012 at the University of Extremadura (Badajoz, 38°53' N 6°58' W) in order to further extend our research in the reconstruction of past solar activity (see, for example, Vaquero, 2007). Since 1st January 2013, our sunspot counts have been submitted to the Royal Observatory of Belgium (ROB) as a contribution to the international effort of maintaining and updating the International Sunspot Number. For this purpose, we use a small apochromatic refractor –80 mm of objective diameter and 550 mm of focal length– to project a 150 mm diameter image onto a template. Then, a drawing is done so we obtain our sunspot counts from it. Moreover, solar observations from a secondary station located in Valencia de las Torres (38°24' N 6°00' W) with a refractor –70 mm of objective diameter and 700 mm of focal length– are carried out some days when the main station (in Badajoz) fails.

In this report, we provide a complete set of data obtained throughout the year 2018, with four tables including our data. Moreover, the reference sunspot index is compared with our results.

We hope that this publication is useful to the scientific community studying the sunspot number: the longest solar index series derived from direct observation of the Sun.

Data

Table 1 lists all the observations made in 2018. A few days reflect more than one observation. In such cases, we follow the ROB criteria to choose the best drawing of each day, that is, we choose the observation presenting (in order of priority):

- Highest number of groups
- Highest Wolf number
- Highest Quality
- Smallest time-difference with respect to 12:00 UT (solar culmination)
- Early-in-the-morning counts are best

The drawing quality is represented as an integer number between 1 and 5, according to the following rule (USSPS code):

- 1 = very poor
- 2 = poor
- 3 = fair
- 4 = good
- 5 = exceptional

Note that when both the main and the secondary stations record a solar observation for the same day, that from the main station is chosen as the best observation of the day.

Tables 2 and 3 list daily, monthly, and yearly values of the number of groups and spots over 2018. From the group count G and the sunspot count S , we define the UEx sunspot number (or UEx Wolf number) as follows: $SN_{UEx} = 10G + S$. Additionally, we define the UEx group sunspot number as: $GSN_{UEx} = 12.08G$. These definitions are in agreement with the classical ones (Clette *et al.*, 2014, 2016). Thus, Table 4 lists daily, monthly, and yearly values of SN_{UEx} , while Figure 1 displays the evolution of the time series of the above two indices.

Table 1. Data on sunspot counting over 2018, including month, day, time (UT), observer, quality, number of groups (G), number of spots (S), and UEx sunspot number (SN_{UEx}). An asterisk in the last column indicates that the solar observation was registered at the secondary station.

Month	Day	Time (UT)	Observer	Quality	G	S	SN_{UEx}

Figure 1. Daily (little dots) and monthly (big dots and lines) UEx sunspot number (SN_{UEx}) (blue) and UEx group sunspot number (GSN_{UEx}) (red) in 2018.

Relationship with the reference sunspot index

We have compared SN_{UEx} with the sunspot number (S_N , version 2.0), provided by the World Data Center SILSO, Royal Observatory of Belgium, Brussels (see Figure 2).

Figure 2. Monthly SN_{UEx} (blue) and sunspot number (S_N) (brown) in 2018.

Figure 3 shows a scatter plot of daily SN_{UEx} versus S_N . The corresponding linear fit equation is:

$$SN_{UEx} = (0.79 \pm 0.02) S_N + (-0.28 \pm 0.24) \quad (r = 0.911; p\text{-value} < 0.001)$$

Figure 3. Scatter plot of daily SN_{UEX} versus S_N in 2018.

Acknowledgements

We appreciate the assistance provided by those students who have collaborated in our sunspot counting program. A. J. P. Aparicio thanks the Ministerio de Educación, Cultura y Deporte for the award of a FPU grant. J. M. Vaquero have benefited from the participation in ISSI workshops. This work was partly funded by FEDER-Junta de Extremadura (Research Group Grant GR18097 and project IB16127) and from the Ministerio de Economía y Competitividad of the Spanish Government (project CGL2017-87917-P).
