WEKA: the bird

Copyright: Martin Kramer (mkramer@wxs.nl)

WEKA: the software

- Machine learning/data mining software written in Java (distributed under the GNU Public License)
- Used for research, education, and applications
- Complements “Data Mining” by Witten & Frank
- Main features:
 - ◆ Comprehensive set of data pre-processing tools, learning algorithms and evaluation methods
 - ◆ Graphical user interfaces (incl. data visualization)
 - ◆ Environment for comparing learning algorithms

History

- Project funded by the NZ government since 1993

FRST App Number: 93-WKT-23-719

7. PROGRAMME GOAL (State the overall goal of the programme in a maximum of 5 lines).

The programme aims to build a state-of-the-art facility for developing techniques of machine learning and investigating their application in key areas of the New Zealand economy. Specifically we will create a workbench for machine learning, determine the factors that contribute towards its successful application in the agricultural industries, and develop new methods of machine learning and ways of assessing their effectiveness.

- ◆ Develop state-of-the art workbench of data mining tools
- ◆ Explore fielded applications
- ◆ Develop new fundamental methods

History (2)

- Late 1992 - funding was applied for by Ian Witten
- 1993 - development of the interface and infrastructure
 - ◆ WEKA acronym coined by Geoff Holmes
 - ◆ WEKA's file format "ARFF" was created by Andrew Donkin
 - ARFF was rumored to stand for **A**ndrew's **R**idiculous **F**ile **F**ormat
- Sometime in 1994 - first internal release of WEKA
 - ◆ TCL/TK user interface + learning algorithms written mostly in C
 - ◆ Very much beta software
 - ◆ Changes for the b1 release included (among others):
 - "Ambiguous and Unsupported menu commands removed."
 - "Crashing processes handled (in most cases :-)"
- October 1996 - first public release: WEKA 2.1

History (3)

- July 1997 - WEKA 2.2
 - ◆ Schemes: 1R, T2, K*, M5, M5Class, IB1-4, FOIL, PEBLS, support for C5
 - ◆ Included a facility (based on Unix makefiles) for configuring and running large scale experiments
- Early 1997 - decision was made to rewrite WEKA in Java
 - ◆ Originated from code written by Eibe Frank for his PhD
 - ◆ Originally codenamed **JAWS** (**JA**va **W**eka **S**ystem)
- May 1998 - WEKA 2.3
 - ◆ Last release of the TCL/TK-based system
- Mid 1999 - WEKA 3 (100% Java) released
 - ◆ Version to complement the Data Mining book
 - ◆ Development version (including GUI)

WEKA: versions

- There are several versions of WEKA:
 - ◆ WEKA 3.0: “book version” compatible with description in data mining book
 - ◆ WEKA 3.2: “GUI version” adds graphical user interfaces (book version is command-line only)
 - ◆ WEKA 3.3: “development version” with lots of improvements
- This talk is based on the latest snapshot of WEKA 3.3 (soon to be WEKA 3.4)

WEKA only deals with “flat” files

```
@relation heart-disease-simplified
```

```
@attribute age numeric
```

```
@attribute sex { female, male}
```

```
@attribute chest_pain_type { typ_angina, asympt, non_anginal, atyp_angina}
```

```
@attribute cholesterol numeric
```

```
@attribute exercise_induced_angina { no, yes}
```

```
@attribute class { present, not_present}
```

```
@data
```

```
63,male,typ_angina,233,no,not_present
```

```
67,male,asympt,286,yes,present
```

```
67,male,asympt,229,yes,present
```

```
38,female,non_anginal,?,no,not_present
```

```
...
```

Flat file in
ARFF format

Weka GUI Chooser

Waikato Environment for Knowledge Analysis

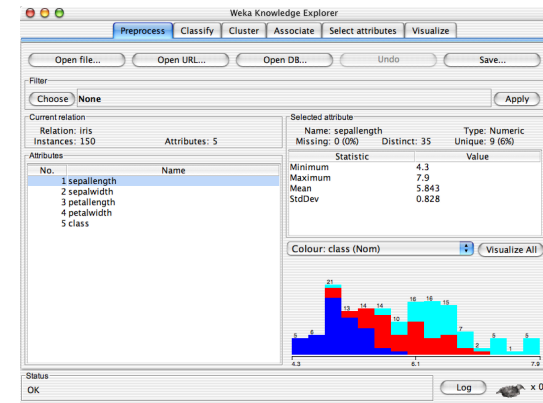

(c) 1999 – 2003
University of Waikato
New Zealand

GUI

Simple CLI Explorer

Experimenter KnowledgeFlow

Weka Experiment Environment

Experiment Configuration Mode: Simple Advanced

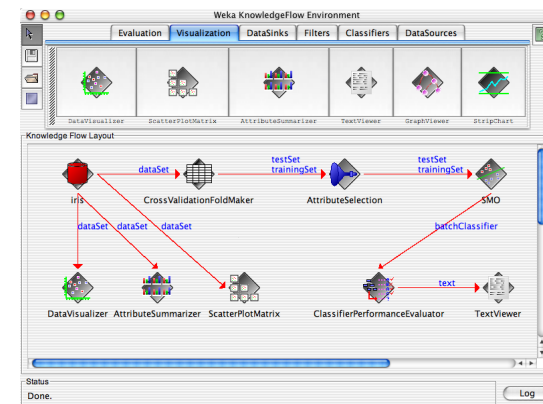

Results Destination: JDBC database URL: jdbc:ids=experiments.prp

Experiment Type: Cross-validation (selected), Classification (selected)

Iteration Control: Number of repetitions: 10, Data sets first (selected)

Datasets: /Users/eibe/Documents/datasets/UCI/iris.arff, /Users/eibe/Documents/datasets/UCI/vote.arff, /Users/eibe/Documents/datasets/UCI/glass.arff

Algorithms: J48 -C 0.25 -M 2, NeuralNetwork -L 0.3 -M 0.2 -N 500 -V 0 -S 0 -E 20 -H a, NaiveBayes

Explorer: pre-processing the data

- Data can be imported from a file in various formats: ARFF, CSV, C4.5, binary
- Data can also be read from a URL or from an SQL database (using JDBC)
- Pre-processing tools in WEKA are called “filters”
- WEKA contains filters for:
 - ◆ Discretization, normalization, resampling, attribute selection, transforming and combining attributes, ...

Explorer: building “classifiers”

- Classifiers in WEKA are models for predicting nominal or numeric quantities
- Implemented learning schemes include:
 - ◆ Decision trees and lists, instance-based classifiers, support vector machines, multi-layer perceptrons, logistic regression, Bayes’ nets, ...
- “Meta”-classifiers include:
 - ◆ Bagging, boosting, stacking, error-correcting output codes, locally weighted learning, ...

Explorer: clustering data

- WEKA contains “clusterers” for finding groups of similar instances in a dataset
- Implemented schemes are:
 - ◆ *k*-Means, EM, Cobweb, *X*-means, FarthestFirst
- Clusters can be visualized and compared to “true” clusters (if given)
- Evaluation based on loglikelihood if clustering scheme produces a probability distribution

Clusterer

Explorer: attribute selection

- Panel that can be used to investigate which (subsets of) attributes are the most predictive ones
- Attribute selection methods contain two parts:
 - ◆ A search method: best-first, forward selection, random, exhaustive, genetic algorithm, ranking
 - ◆ An evaluation method: correlation-based, wrapper, information gain, chi-squared, ...
- Very flexible: WEKA allows (almost) arbitrary combinations of these two

Explorer: data visualization

- Visualization very useful in practice: e.g. helps to determine difficulty of the learning problem
- WEKA can visualize single attributes (1-d) and pairs of attributes (2-d)
 - ◆ To do: rotating 3-d visualizations (Xgobi-style)
- Color-coded class values
- “Jitter” option to deal with nominal attributes (and to detect “hidden” data points)
- “Zoom-in” function

Experimenter KnowledgeFlow

Performing experiments

- Experimenter makes it easy to compare the performance of different learning schemes
- For classification and regression problems
- Results can be written into file or database
- Evaluation options: cross-validation, learning curve, hold-out
- Can also iterate over different parameter settings
- Significance-testing built in!

Experimenter KnowledgeFlow

The Knowledge Flow GUI

- New graphical user interface for WEKA
- Java-Beans-based interface for setting up and running machine learning experiments
- Data sources, classifiers, etc. are beans and can be connected graphically
- Data “flows” through components: e.g., “data source” -> “filter” -> “classifier” -> “evaluator”
- Layouts can be saved and loaded again later

The image shows a screenshot of the Weka KnowledgeFlow Environment. At the top, the title bar reads "Weka KnowledgeFlow Environment". Below it is a tabbed interface with five tabs: "Evaluation", "Visualization", "DataSinks", "Filters", and "DataSources". The "DataSources" tab is currently selected and highlighted in blue. To the right of the tabs is a green question mark icon. Below the tabs is a horizontal panel containing four data loader components, each represented by a red cylinder icon with a diamond-shaped base. From left to right, they are labeled "ArffLoader", "CSVLoader", "C45Loader", and "SerializedInstancesLoader". Below this panel is a large area titled "Knowledge Flow Layout". This area contains a single "ArffLoader" component, also represented by the red cylinder icon. At the bottom of the window, there is a "Status" bar that displays "Done." and a "Log" button to its right. The interface includes standard window controls (red, yellow, green buttons) in the top-left corner and a vertical scrollbar on the right side of the "Knowledge Flow Layout" area.

The image shows the Weka KnowledgeFlow Environment interface. At the top, there are tabs for Evaluation, Visualization (selected), DataSinks, Filters, Classifiers, and DataSources. Below the tabs is a toolbar with icons for DataVisualizer, ScatterPlotMatrix, AttributeSummarizer, TextViewer, GraphViewer, and StripChart. The main area is titled 'Knowledge Flow Layout' and contains a simple flow diagram with two nodes: 'ArffLoader' (represented by a red cylinder icon) and 'DataVisualizer' (represented by a scatter plot icon). A red arrow points from 'ArffLoader' to 'DataVisualizer', with the label 'dataSet' in blue text next to the arrow. At the bottom, there is a 'Status' box showing 'Done.' and a 'Log' button.

      ASummary --> AttributeSelection[AttributeSelection]
      AttributeSelection -- testSet trainingSet --> SMO[SMO]
      AttributeSelection -- testSet trainingSet --> CPE[ClassifierPerformanceEvaluator]
      SMO -- batchClassifier --> CPE
      CPE -- text --> TextViewer[TextViewer]
  
```

The diagram illustrates a data processing pipeline in Weka KnowledgeFlow. It starts with a 'dataset' source feeding into a 'weka.core.converters.ArffLoader' node. This loader has a 'file' field set to 'iris.arff' and buttons for 'Open...', 'Save...', 'OK', and 'Cancel'. From the loader, data is distributed to three visualization nodes: 'DataVisualizer', 'AttributeSummarizer', and 'ScatterPlotMatrix'. The 'AttributeSummarizer' node outputs to another 'AttributeSummarizer' node, which then feeds into an 'AttributeSelection' node. The 'AttributeSelection' node outputs two data streams: 'testSet' and 'trainingSet'. These streams are used by the 'SMO' (Sequential Minimal Optimization) classifier and the 'ClassifierPerformanceEvaluator' (CPE) node. The 'SMO' node also outputs a 'batchClassifier' stream to the 'ClassifierPerformanceEvaluator'. Finally, the 'ClassifierPerformanceEvaluator' outputs a 'text' stream to a 'TextViewer' node.
