Rethinking Consideration in the Electronic Age

Robert A. Hillman* & Maureen A. O'Rourke**

Abstract

Our fast-paced age of electronic agreements that ostensibly govern transactions as diverse as downloading software, ordering goods, and engaging in collaborative development projects raises questions regarding the suitability of contract law as the appropriate legal framework. While this question arises in many settings, we focus here on the free and open source software (FOSS) movement because of the maturity and success of its model and the ubiquity of its software. We explore in particular whether open source licenses are supported by consideration, and argue that they are, and that open source licenses are contracts. We further argue that a contractual framework working in tandem with the intellectual property laws is the appropriate legal structure to govern FOSS transactions. Our discussion holds implications for the understanding of consideration doctrine and contract law generally outside of the FOSS example and, indeed, for collaborative development and electronic agreements generally. The article is thus an exercise in understanding consideration doctrine's past and future.

Introduction

The age of electronic communication and digital products creates new challenges for contract law. Novel methods of doing business and new kinds of products raise substantial issues of contract formation, enforcement, and remedy. Because of the importance to our economy of the industries involved, perhaps no other set of commercial legal issues requires greater attention.¹

¹ See, e.g., U.S. CENSUS BUREAU, 2005 Service Annual Survey: Information Sector Services, Table 3.1.6, available at http://www.census.gov/svsd/www/services/sas/sas_NAICS51.pdf (listing the operating revenue of the United States software industry as over 119 billion in 2005).

Indeed, one important set of issues is whether some transactions are or should be encompassed within a contractual framework at all.² For example, what is the appropriate legal framework to govern the licensing of open source software that is collaboratively developed and powers ever more machines?³ Steven Weber aptly captures the nature of the open source software movement:

Open source collaboration depends on an explicitly intellectual property regime, codified in a series of licenses. It is, however, a regime built around a set of assumptions and goals that are different from those of mainstream intellectual property rights thinking. The principal goal of the open source intellectual property regime is to maximize the ongoing use, growth, development and distribution of free software. To achieve that goal, this regime shifts the fundamental optic of intellectual property rights away from

³ For a discussion of the nature of source code, see Jyh-An Lee, *New Perspectives on Public Goods Production: Policy Implications of Open Source Software*, 9 *Vand. J. Ent. & Tech. L.* 45, 49 (2006):

"Software developers write software in various programming languages The original format they write is called source code, which is easy for trained programmers to read and understand. This source code has to be compiled or translated into an object code . . . before it can be processed by a computer. . . . Source code enables users to extend or modify the software for their own needs, while object code is understood only by computers.

'Open source software' is software, the source and object code of which are distributed and made available to the public allowing for free modification by other programmers. In contrast most commercial software is proprietary software, and is distributed only with the object code so that competitors are prevented from reusing the course code to develop the software.

protecting the prerogatives of an author toward protecting the prerogatives of generations of users.⁴

Although there are many different open source licenses, the General Public License (GPL) is likely the most common.⁵ To achieve the goal of creating a software commons, the GPL authorizes copyholders to transfer, copy, or modify the software subject to a series of restrictions. The restrictions are designed to further an environment of openness by requiring copyholders to reveal the source code to transferees of any software products that are derived from the original source code (often referred to as the “copyleft” provision)⁶ and to transfer such software under the same terms as the GPL (“same terms” provision), making the terms themselves “viral” in nature.⁷

Historically, some open source vendors and enthusiasts insisted that such arrangements were merely limited licenses to use the software and not contracts in part because they do not require the copyholder to furnish consideration to support the grant of use.⁸ If the user violated the restrictions in the license, licensors could seek redress in an intellectual property infringement proceeding, but not for breach of contract. The advantages of this legal framework perceived by these advocates include the absence of worrisome formation, liability, privity, and remedial rules of contract law and the availability of injunctive relief under intellectual property law.⁹ Perhaps even more important, open source visionaries believe their arrangements create a new framework of sharing and openness that is impervious to and on a higher plane than contract law.¹⁰ On the other hand, others maintain, although without much analysis, that the typical open source license, such as the GPL, constitutes a contract because of the nature of the restrictions and other provisions in the license.¹¹

We show in some detail that open source licenses that contain restrictions such as the copyleft and the “same terms” restrictions described above do not lack consideration, and are

therefore not precluded from treatment as contracts on that ground.¹² More important, we assert that contract law *should* govern these transactions because contract law best facilitates the goals of the open source movement while at the same time protecting the interests of open source end users. Indeed, contract working with copyright law perhaps best enables the open source movement to realize its goals than reliance on copyright law alone.

But as the title to this article suggests, we have another important goal beyond analyzing the legal framework of the open source movement. This article illuminates the meaning and role of the consideration doctrine as we move from a paper into an electronic world. Consideration doctrine has always been something of a mystery and working out how it does or does not apply in the open source software setting increases our understanding of how the principle has and should continue to serve society. The article is thus an exercise in understanding where consideration doctrine has been and where it is going.

We demonstrate that the purpose of consideration doctrine is to enforce promises that benefit society (viewed broadly) and that are capable of judicial administration. Under this pragmatic framework, open source software transactions can and should be administered as contracts because of their economic importance and because of the judiciary's ability to administer them. Further, because contract law clarifies formation requirements, quality obligations, and remedial duties of open source transactions, and generally increases transactional certainty, both providers and end users of open source software have an interest in establishing a contractual framework for their transactions. These conclusions have implications beyond the software industry and shed light on the appropriate legal landscape for other movements employing the philosophy of openness.¹³

Part I constitutes a brief primer on the bargain theory of consideration as courts apply it in the paper world. Part II discusses the open source software movement and concludes that open source licenses are contracts under an appropriate understanding of consideration doctrine. Part III makes the normative argument that a contract-based framework makes sense for the open source community. Our conclusion reiterates our view that contract law, working with intellectual property law, is the appropriate legal structure to govern most open source software transactions.

I. The Bargain Theory of Consideration¹⁴

¹² Other terms that constitute consideration, according to advocates of the contract model, include those that require the licensee to waive any infringement claim or breach of warranty complaint.

¹³ See *infra* notes , and accompanying text.

¹⁴ Much of the discussion in Part I is based on Robert A. Hillman, *Principles of Contract Law* 15-37 (2004).

A. The Meaning of “Bargain”

As the Introduction discusses, an important issue in the electronic age is whether, as a descriptive matter, an open source software license constitutes a contract. The argument focuses on whether consideration supports the distribution of open source software. So we start with a brief primer on the consideration doctrine under traditional contract law.¹⁵

1. Definitions

In a nutshell, contract law enforces promises if the promise is part of a “bargained-for exchange” or “bargain.” A bargain exists if the promisor extracts something from the promisee in exchange for the promise. This price of the promise is called “consideration.” Contract law distinguishes a promise supported by consideration from a gift promise, which is not enforceable.¹⁶

The following example illustrates:

Suppose a “benevolent” person, Ron D. Jockefeller, promises to buy clothes for a homeless person if the homeless person walks to a clothing store a few blocks away. If the homeless person walks to the store, is Jockefeller’s promise of the clothes enforceable?¹⁷ Only if Jockefeller “bargained for” the homeless person to walk to the store, which in turn depends on whether Jockefeller’s motive was to extract the walk as the price of the promise of clothes. But in order to understand Jockefeller’s motive, we need more facts. Suppose Jockefeller owned a restaurant and the homeless person had camped out in front of the restaurant. These facts support a finding that Jockefeller’s motive for his promise was to remove the homeless person from the vicinity of the restaurant and we can therefore say that Jockefeller “bargained for” the homeless person’s walk to the clothing store. But if Jockefeller did not own a restaurant and made the promise, not because he would get something in return, but simply because he is a wonderful person, the promise would constitute a gift promise and be unenforceable. The homeless person still must walk to the store to pick up the gift. But those in the

¹⁵ See *id.*

¹⁶ Restatement (Second) of Contracts § 2(1) (1981) (“A promise is a manifestation of intention to act or refrain from acting in a specified way, so made as to justify a promisee in understanding that a commitment has been made.”); *id.* at § 3 (“A bargain is an agreement to exchange promises or to exchange a promise for a performance or to exchange performances.”).

¹⁷ This example was inspired by a similar problem posed by Williston in 1 Samuel Williston, *The Law of Contracts* 232-33 (1924), quoted in *Maughs v. Porter*, 161 S.E. 242, 243 (Va. 1931).

know say that the trip to the store is a condition necessary to pick up a gift, not consideration to support Jockefeller's promise.¹⁸

Of course, distinguishing a condition of a gift from consideration often is no small challenge.¹⁹ In Cardozo's famous opinion in *Allegheny College v. National Chautauqua County Bank*,²⁰ for example, Mary Yates Johnston promised Allegheny College \$5000 to establish the "the Mary Yates Johnston memorial fund."²¹ After contributing \$1000, Johnston repudiated her promise, which led to a lawsuit by the college. Judge Cardozo held that the college assumed a duty "to perpetuate the name of the founder of the memorial," which was "sufficient in itself to give validity to the subscription within the rules that define consideration for a promise of that order."²² However, the dissent thought that "[t]he sum offered was termed a 'gift' by [Johnston]. Consequently, I can see no reason why we should strain ourselves to make it, not a gift, but a trade."²³ In short, the majority and dissent disagreed over Johnston's motive—was the use of her name the price of her promise or did she simply want to make a gift, with the suggestion that the college use her name. Both interpretations seem reasonable.

By drawing on the murky gift versus consideration distinction, contract law leaves plenty of room for courts to decide whether to enforce promises for other reasons. In short, Cardozo's conclusion likely was motivated more by his sense of the importance of facilitating charitable donations than on the strictures of consideration doctrine.

2. More on the promisor's motive So far, the discussion illustrates that traditional contract law's "bargain" concept focuses on the promisor's motive for making the promise and that this determination is often a challenge. Adding further to the confusion, the promisor's actual motive does not control, but what a *reasonable person* with knowledge of the circumstances would believe is the promisor's motive.²⁴ This is consistent with contract law's

¹⁸ Hillman, *supra* note , at 16; see also Williston, *supra* note , at 232-33; *Plowman v. Indian Refining Co.*, 20 F. Supp. 1, 5 (E.D. Ill. 1937) (employees obligation to visit employer's office to pick up checks merely a condition for a gift).

²¹ *Id.* at 174.

²² *Id.* at 176.

²³ *Id.* at 177.

²⁴ See Williston, *supra* note , at 232; see also Restatement (Second) of Contracts § 81, cmt. a: "[T]he promisor must *manifest* an intention to induce the performance or return promise

general focus on the apparent rather than subjective meaning of the parties' language in negotiating and forming their contract. Another wrinkle is that a promisor's motive to extract something from the promisee can be very minor among a host of reasons for making the promise (as determined objectively) and that motive can change over time. Receiving something in return "does not have to be the primary or even a substantial reason for making the promise, it simply has to be one of the reasons."²⁵ This manoeuvre, of course, affords courts even more leeway to manipulate consideration doctrine and to decide on other grounds.

B. Why Not Enforce Gift Promises?

Theorists have spilled a great deal of ink trying to understand why contract law generally enforces bargains but not gift promises. Why is my "bargain" to sell my piano to Alice in exchange for \$400 enforceable, but my promise to give Alice my piano is not?²⁶ Before enforcing a promise, why bother to determine whether one of a potential host of reasons for making a promise, viewed objectively, was to extract something from the promisee?

Contract law analysts have offered many disparate answers to this question. Professor Lon Fuller's set of explanations is perhaps the most prominent, arguably the most persuasive and, although sometimes recast in different terminology, the most repeated. Nevertheless, even Fuller's reasons leave much open to debate.

In *Consideration and Form*,²⁷ Professor Fuller presented what he called "formal" and "substantive" reasons for enforcing promises supported by consideration, but not gift promises. In the "formal" reason category, Fuller thought that, as a general matter, promises supported by

and to be induced by it, and . . . the promisee must *manifest* an intention to induce the making of the promise and to be induced by it." (Emphasis added).

²⁵ Hillman, *supra* note , at 18. See Restatement (Second) of Contracts 81 ("The fact that what is bargained for does not *of itself* induce the making of a promise does not prevent it from being consideration for the promise."); *Allegheny College v. National Chautauqua County Bank of Jamestown*, 159 N.E. 173 (N.Y. 1927).

²⁶ For further obfuscation see the Restatement (Second) of Contracts: "A gift is not ordinarily treated as a bargain, and a promise to make a gift is not made a bargain by the promise of the prospective donee to accept the gift, or by his acceptance of part of it. *This may be true even though the terms of the gift impose a burden on the donee as well as the donor.*" Restatement (Second) of Contracts §71, cmt. *c* (emphasis added). The best explanation for this language is that some burdens constitute only what is necessary to complete a gift. For example, a donee who must travel to a store to receive a gift experiences the burden of the travel, but the travel ordinarily would not constitute consideration. See *supra* notes ___ and accompanying text.

²⁷ Fuller, 41 Colum. L. Rev. 799 (1941).

consideration generate more evidence than gift promises that a promisor actually made the promise. Enforcing only bargains thus satisfies “[t]he need for evidentiary security.”²⁸ Of course, contract law also could have enforced written gift promises, which would have satisfied Fuller’s “evidentiary function” as well. The evidentiary role of consideration therefore cannot constitute a sufficient explanation for enforcing bargains and not gift promises.

Fuller explained further that people take their bargains more seriously than gift promises.²⁹ He reasoned that people often make gift promises impulsively or improvidently.³⁰ As with Fuller’s “evidentiary” function, however, the “cautionary” role of consideration cannot fully explain the bargain requirement. Enforcing written gift promises arguably also would serve the same purpose because most people believe that written promises are more important and serious. In fact, many people believe such promises are already legally enforceable.³¹

Fuller also set forth “substantive” explanations for the gift-consideration division that concern “the significance of the promise made and not merely the circumstances surrounding the making of it.”³² For example, Fuller thought that enforcing bargains enhances “private autonomy.” According to Fuller, “the law views private individuals as possessing a power to

²⁸ *Id.* at 800. See also Mark B. Wessman, *Retraining the Gatekeeper: Further Reflections on the Doctrine of Consideration*, 29 *Loy. L. A. L. Rev.* 713, (1996) (the requirement of a bargain avoids enforcement of “too easily fabricated” gift promises.”).

²⁹ Fuller, *supra* note , at 816-17 (“[T]he fact that the transaction is an exchange and not a gift . . . does offer some guaranty so far as the cautionary . . . function[] of form [is] concerned.”).

³⁰ Think about the famous case of *Dougherty v. Salt*, in which Helena Dougherty promised her nephew, Charlie, \$3000 because she wanted to “take care” of him. The facts reveal that, before Helena’s promise, Charlie’s guardian told Helena not to “take . . . out in talk” her appreciation for her nephew. 125 N.E. 94 (N.Y. 1919). The court therefore declined to enforce Helena’s promise therefore because she was goaded into it. *Id.* at ; see also Wessman, *supra* note , at 835 (enforcing gift promises would lead to “inadvertent contracting.”).

³¹ Fuller also discussed the “channeling” function of consideration. In a nutshell, a bargain presents parties with a concrete procedure or a “distinct set of instructions” for creating an enforceable obligation. Hillman, *supra* note , at 24. Gift promises, according to Fuller, are “too amorphous to constitute clear instructions for creating a legal obligation.” *Id.* See Fuller, *supra* note , at 815 (“As to the channeling function . . . the [gift] promise is made in a field where intention is not naturally canalized. There is nothing . . . to effect a neat division between tentative and exploratory expressions of intention, on the one hand, and legally effective transactions, on the other.”). But again, written gift promises would do much of the same “channeling” work as a bargain.

³² *Id.* at 799-800 (substantive bases of contract liability relate to; see also *id.* at 806-14.

effect . . . changes in their legal relations” every bit as effective as a legislature.³³ In addition, people can rely on their bargains with the knowledge that contract law will enforce them. Further, where one party has relied in a manner that benefits the promisor, the reason for enforcing promises is strongest because one party’s detrimental reliance results in the other’s unjust enrichment.³⁴

Fuller’s substantive reasons for enforcing bargains thus far are of limited help in explaining why contract law enforces bargains but not gift promises.³⁵ For example, contract law could enforce gift promises to facilitate people’s freedom to make and receive gifts.³⁶ Private autonomy therefore cannot be the primary reason for the distinction between gifts and bargains. Fuller’s reliance and unjust enrichment arguments also fail to explain very well why contract law enforces bargains even if the promisee has not relied or conferred a benefit on the promisor.³⁷

But Fuller offered one additional substantive argument for the distinction between bargains and gift promises that is more convincing. He explained that gift promises, more than bargains, are likely to constitute “sterile transmissions,”³⁸ meaning that gift promises add less than bargains to the “production of wealth and the division of labor.”³⁹ In short, bargains better than gift promises contribute to a prosperous society by moving resources to their highest valued uses.⁴⁰

³³ Id. at 806-08.

³⁴ Id. at 815-16.

³⁵ See Mark B. Wessman, Recent Defenses of Consideration: Commodification and Collaboration, 41 *Ind. L. Rev.* 9, 10 (2008) (“[T]he reasons commonly advanced in favor of enforcing bargain promises—the facilitation of exchange, the protection of expectations or reliance, or respect for autonomy—could also be mustered in support of the enforcement of promises traditionally classified as gratuitous.”).

³⁶ See Charles Fried, *Contract As Promise* 20 (1981).

³⁷ But see Fuller, *supra* note , at (“to encourage reliance we must dispense with its proof.”).

³⁸ Id. at 815 (quoting Bufnoir, *Propriété et Contrat* 487 (2d ed. 1924)).

³⁹ Id. at 815. See also Hillman, *supra* note , at 25.

⁴⁰ Melvin Eisenberg asserts that gift promises would lose their symbolic meaning if they were legally enforceable. See Melvin Aron Eisenberg, *The World of Contract and the World of Gift*, 85 *Calif. L. Rev.* 821, 849 (1997):

Others have contributed additional reasons for the distinction between gift promises and bargains that nicely compliment Fuller's. Professor Melvin Eisenberg pointed out that courts lack the capacity to entertain the potential volume of cases that would flood the courts if people could sue for breach of gift promises. Further, he underscored the difficulty of *proving* the deliberativeness of oral gift promises and the challenge of sorting out valid from invalid excuses for nonperformance of such promises.⁴¹ The cost of administering a gift-promise regime, in short, would likely exceed the benefit.⁴² In addition, even if Fuller were wrong about the contribution of gift promises to society because, for example, gift promises move resources voluntarily from more to less prosperous citizens, itself a socially beneficial outcome, *legal* enforcement of these promises might decrease their number. Promisors might become wary of making gift promises if they thought that they could not change their minds.⁴³

In the next subsection we reenforce the argument that the value of bargains and the capacity of our institutions to administer them stand out as the most promising explanations for the consideration doctrine.

C. Is the Bargain Theory Coherent?

The bargain theory is neither descriptively nor normatively very coherent. As Professor Charles Fried pointed out and as the discussion above intimates, the theory leaves ample room

The world of gift is a world of our better selves, in which affective values like love friendship, affection, gratitude, and comradeship are the prime motivating forces. These values are too important to be enforced by law and would be undermined if the enforcement of simple, affective donative promises were to be mandated by the law.

⁴¹ See Melvin Aron Eisenberg, Donative Promises, 47 U. Chi. L. Rev. 1, (1979); Eisenberg, *supra* note , at 823.

⁴² Enforcing only written gift promises would alleviate some of these concerns. See *supra* notes , and accompanying text.

⁴³ Wessman, *supra* note , at 13-16. Still others have contributed enlightened explanations of the bargain-gift promise distinction. See, e.g., Roy Kreitner, The Gift Beyond the Grave: Revisiting The Question of Consideration, 101 Colum. L. Rev. 1876 (2001); Charles Fried, Contract as Promise: A Theory of Contractual Obligation (Harvard University Press 1981); Melvin Aron Eisenberg, Donative Promises, 47 U. Chi. L. Rev. 1 (1979); Charles Goetz & Robert E. Scott, Enforcing Promises, An Examination of the Basis of Contract, 89 Yale L. J. 1261 (1980); Richard A. Posner, Gratuitous Promises in Economics and Law, 6 J. Legal Stud. 411 (1977).

for courts to dodge issues and for theorists to ponder.⁴⁴ Courts sometimes police the adequacy of consideration despite contract law's freedom-of-contract norm to leave that issue to the parties.⁴⁵ Courts enforce gift promises that induce reliance or for a benefit already received despite the absence of a bargain.⁴⁶ Courts enforce without consideration contract modifications, option contracts, waivers, and promises made to charitable institutions. Courts enforce promises even if the return consideration is only an ephemeral reason for making the promise.⁴⁷ Courts manipulate or dispense with consideration if they believe a gift promise is important enough to enforce.⁴⁸ Consideration to support a promise can come from a party other than the promisee.⁴⁹ Theorists offer conflicting moral, economic, and libertarian theories, among others, to "explain" promise enforcement.⁵⁰ No wonder that Professor Grant Gilmore was moved to announce the wholesale demise of the bargain theory of consideration.⁵¹

Notwithstanding Gilmore, we believe that the bargain theory survives as the best the law can do at line drawing between those promises that should be legally enforceable and those that should be left to the promisor's "*foro conscientiae*."⁵² Despite its malleability, consideration serves a minimal gatekeeper role, corralling the large category of gift promises in which the cost of enforcement outweighs the benefit. Nevertheless, the bargain theory's relative indeterminacy means that courts can enlarge the category of promises within its ranks if they believe the promise is important and enforcement is administratively feasible.

Two examples of the latter should suffice. To preserve the flexibility of contracting parties in the face of changed circumstances, contract law saw the importance of enforcing contract modifications that are not supported by consideration. Courts therefore devised mutual

⁴⁴ See Charles Fried, *Contract As Promise* 35 (1981); see also Randy Barnett, *A Consent Theory of Contract*, 86 *Colum. L. Rev.* 269 (1986); Wessman, *Gatekeeper*, *supra* note , at

⁴⁵ See, e.g., *Jones v. Star Credit Corp.*, 298 N.Y.S.2d 264 (Sup. Ct. 1969).

⁴⁸ See the discussion of *Allegheny College*, *supra* notes , and accompanying text.

⁴⁹ Consideration "may be given by the promisee or by some other person." *Restatement (First) of Contracts* 75(2) (1932).

⁵⁰ Robert A. Hillman, *Richness of Contract Law* (1997).

⁵¹ Grant Gilmore, *The Death of Contract* 111 n. 34 (1974) ("Hamer v. Sidway . . . illustrates . . . that the New York Court of Appeals . . . rejected the so-called bargain theory of consideration.") see also Barnett, *supra* note , at , 287-290.

⁵² *Mills v. Wyman*, 20 *Mass.* 207 (1825).

rescission, waiver, and other theories within the framework of the consideration theory to allow for enforcement of such modifications.⁵³ Similarly, contract law began to enforce promises not to revoke offers (option contracts) in the absence of consideration because of the importance of options to our economy: “The fact that the option is an appropriate preliminary step in the conclusion of a socially useful transaction provides a sufficient substantive basis for enforcement”⁵⁴

In short, under the rubric of “consideration” twentieth-century courts enforced promises that increased society’s welfare, interpreted broadly, and that were capable of judicial administration.⁵⁵ Lines were drawn, but courts could adjust them if necessary. In Parts II and III of this paper, we argue respectively that open source licenses nicely fit in the category of agreements that consideration doctrine, as it is currently understood, encompasses. Further, we argue that contract law *should* enforce such licenses as contracts.

II. The Paper World’s Conception of Contracts Includes Open Source Licenses

A. The Nature of the Open Source Movement

The notion that sharing software might be a successful technical and business strategy began somewhat earlier than many might think. In 1955, users of one of IBM’s early systems organized a user group called SHARE in which members exchanged ideas and software.⁵⁶ IBM

⁵³ See, e.g., Robert A. Hillman, Contract Modification Under the Restatement (Second) of Contracts, 67 Cornell L. Rev. 680 (1982); Duncan Kennedy, Form and Substance in Private Law Adjudication, 89 Harv. L. Rev. 1685, 1700 (1976).

⁵⁴ Restatement (Second) of Contracts 87(1), cmt. (b); see also James D. Gordon III, Consideration and the Commercial-Gift Dichotomy, 44 Vand. L. Rev. 283, 292-96 (1991); David Gamage & Allon Kedem, Commodification and Contract Formation: Placing Consideration Doctrine on Stronger Foundations, 73 U. Chi. L. Rev. 1299, 1315-21 (2006) (“Since option contracts and guarantee contracts are socially valuable in substance, any imperfections in form can be ignored. Ironically, whereas these authorities normally prioritize substance over form, they are willing to accept form over substance for promises that they recognize as sufficiently valuable.”).

⁵⁵ See Wessman, *supra* note , at 14 (observing “the trend in modern contract law to enforce all commercial promises—even though some are technically gratuitous”).

⁵⁶ See About SHARE, <http://www.share.org/AboutSHARE/Organization/tabid/66/Default.aspx>, last visited Jan. 25, 2009 (“In 1955, just two years after the release of IBM’s first computer, a handful of the earliest IT professionals collaborated to form SHARE.”); see also Mary Brandel, 1955: IBM Customers Form the First Computer User Group, available at <http://www.cnn.com/TECH/computing/9905/05/1955.idg/index.html> (“[SHARE’s] main purpose was to stop reinventing the wheel – at the time, all the 701 users were writing their own utilities and programs. With the impending release of the 704, they faced the giant task of rewriting or

at the time distributed some source code with its hardware and encouraged the formation of the group because the more utilities that would run on IBM's hardware, the more attractive its machines became.⁵⁷ It did not view software as an independent revenue source in the same way that many firms do today.

Computer technology has of course changed dramatically since 1955 with the advent of mini-computers and later the PC.⁵⁸ A mass market for software grew up in response, and vendors protected their software with a panoply of legal methods that made sharing not simply unlikely but potentially a breach of contract, misappropriation of trade secrets, copyright infringement, and/or patent infringement.⁵⁹

Most place the origin of what is now known as FOSS (free and open source software) not with SHARE but substantially later. In the mid 1980s, Richard Stallman founded the Free Software Foundation (FSF) in part as a reaction against the rise of business models that relied on keeping source code proprietary and thus effectively inaccessible to those who wished to modify or otherwise improve on it and share their solutions with others.⁶⁰ The acronym FOSS accommodates two visions of the open source movement. Stallman's FSF contends that ethically the copyright system is "inherently divisive and antisocial" while others in the open source community view software sharing as an important development model but compatible with proprietary software.⁶¹ Thus, for example, the FSF's General Public License (GPL)

porting all those programs to a new machine. So from the very first meeting, the group began to share programming knowledge."); W. David Gardner, SHARE, IBM User Group, To Celebrate 50th Anniversary, available at <http://www.informationweek.com/shared/printableArticleSrc.jhtml;jsessionid=GLPLF1IP4...> (last visited Jan. 25, 2009) ("SHARE and its SHARE library invented the open source concept.").

⁵⁷ See (SHARE (computing), available at [http://en.wikipedia.org/wiki/SHARE_\(computing\)](http://en.wikipedia.org/wiki/SHARE_(computing)) ("Originally, IBM's operating systems were distributed in source form and it was common for systems programmers to make local modifications and to exchange them with other users.").

contains provisions which require modification and redistribution of the code under terms that keep both the original code and derivative works thereof open, while other open source licenses allow access to source code but do not necessarily place conditions on modification or redistribution that would enforce the norm of openness.⁶²

Open source software is developed in a dramatically different way than proprietary code. The open source development model is collaborative, with large numbers of participants ranging from professional programmers to hobbyists contributing to any particular effort.⁶³ That this development model can be successful is beyond question. Some of the most widely used, important and complex programs are open source, and many companies that traditionally advocated a proprietary model have embraced open source in one way or another.⁶⁴

Source Software 2007: Risks, Rewards and Practical Realities in the Corporate Environment (noting the “two primary factions within the open source community” and describing them as the “‘free software movement’ [] a philosophical and social movement that aims to change the rights of software users [and] the ‘open source movement,’ which promotes the efficiency and better software development model of open source development, rather than moral or ethical ideals of freedom.”); Gonzalez, *supra* note 2, at 183-84 (describing the free software movement and the Open Source Initiative: “[T]he free software movement justifies the freedoms to distribute and access the source code as a matter of social fairness. . . . [T]he Open Source Initiative agrees with the superiority of an open development process, but they consider it compatible with the commercial software companies, that is, with proprietary software.”).

⁶² Gonzalez, *supra* note 2, at 184-85. The major example of an open source license that does not require openness downstream is the Berkeley Software Distribution (BSD) license. *Id.* at 184; see also Weber, *supra* note 4, at 20-53 (chronicling the early history of open source software and discussing the BSD).

⁶³ See Douglas D. McGhee, Free and Open Source Software Licenses: Benefits, Risks, and Steps Toward Ensuring Compliance, 19 No. 11 *Intell. Prop. & Tech. L.J.* 5, 5 (2007) (“Instead of a small team of proprietary developers working on a software product, any programmer with access to the Internet can participate in the development of a FOSS project so long as they agree to make their work publicly available. The hoped-for result of having many sets of eyes on a body of code is that the final result will be superior to what a small group of proprietary developers bound by confidentiality agreements can accomplish.”); see also Amy Kapczynski, The Access to Knowledge Mobilization and the New Politics of Intellectual Property, 117 *Yale L. J.* 804, 822-25, 869 (2008) (noting that open source software “offers a model of collaborative, distributed innovation that does not rely on the incentivizing effect of IP rights.”)

⁶⁴ See Gonzalez, *supra* note 2, at 160-62 (listing some major open source packages including Apache, Firefox, and Linux, and noting that many large companies are supporting the open source movement); McGowan, *supra* note 2, at 256 (“[C]ollaborative OSS projects such as Linux and Apache demonstrate that a large and complex system of software codes can be built, maintained, developed, and extended in a non-proprietary setting where developers work in a

Backing up this collaborative development effort are the licenses that accompany the code that enforce the community norm of openness. The licenses do not reject copyright law but instead use the author's copyright rights in the code to keep it open.⁶⁵ The GPL, likely the most common FOSS license, is a case in point.⁶⁶ Much open software is licensed under GPL v 2, first issued in 1991.⁶⁷ After an extensive revision process, FSF released GPL v 3 in 2007.⁶⁸

The FSF took the position that GPL v 2 was not a contract. In the words of Eben Moglen, the FSF's attorney:

The word 'license' has . . . a specific technical meaning in the law of property. A license is a unilateral permission to use someone else's property. . . . A contract, on the other hand, is an exchange of obligations, either of promises for promises or of promises of future performance for present performance or payment. . . . The GPL . . . is a true copyright license: a unilateral permission, in which no obligations are reciprocally required by the licensor. Copyright holders of computer programs are given, by the Copyright Act, exclusive right[s] to copy, modify, and redistribute their programs. The

highly parallel and relatively unstructured way.”); see also Jyh-An Lee, *New Perspectives on Public Goods Production: Policy Implications of Open Source Software*, 9 *Vand. J. Ent. & Tech. L.* 45, 69-97 (2006) (“The open source movement has been fairly successful in the development of operating systems and server application systems that respond directly to the needs of sophisticated users, but they have been much less successful in developing end-user applications. Casual observation suggests that [F]OSS is now largely aimed at sophisticated users. This targeting may be explained by the fact that [F]OSS programmers are seeking recognition from their peers, who are sophisticated users”); *infra notes* , and accompanying text.

⁶⁵ See Weber, *supra* note 4, at 84 (“[O]pen source developers are some of the most vehement defenders of intellectual property rights. Rarely do these developers put their software in the public domain, which means renouncing copyright and allowing anyone to do anything with their work.”); see also text accompanying note 4.

⁶⁶ See Davidson & Kumagai, *supra* note , at 137 & n. 16 (“[T]he GPL license covers a solid majority of open source software. According to one source, around two-thirds of all open source projects use the GPL.”); Kumar, *supra* note , at 1 & n. 14 (“Between sixty-five and seventy percent of open source software is GPL[Version 2]-licensed.”).

⁶⁷ Robert W. Gomulkiewicz, *A First Look at General Public License 3.0*, 24 *No. 11 The Computer & Internet Lawyer* 15, 15 (2007) (“Stallman released version 2 of the GPL (GPL 2.0) in 1991 after receiving some input from programmers and legal counsel.”).

⁶⁸ *Id.* (describing the revision process); Sapna Kumar & Olaf Koglin, *GPL Version 3's DRM and Patent Clauses under German and U.S. Law*, *Cri 2/2008*, 33, 33 (noting GPL v 3 was released on June 29, 2007).

GPL, reduced to its essence, says: “You may copy, modify and redistribute this software, whether modified or unmodified, freely. But if you redistribute it, in modified or unmodified form, your permission extends only to distribution under the terms of this license. If you violate the terms of this license, all permission is withdrawn.”⁶⁹

Richard Stallman has also noted policy reasons why FSF prefers that copyright law rather than contract law govern the GPL: “Copyright law is . . . would require every distributor to get a user’s formal assent to the contract before providing a copy. To hand someone a CD without getting his signature first would be forbidden. What a pain in the neck!”⁷⁰ Additionally, copyright law offers the advantage of injunctive relief and contract law has worrisome privity limitations that may make remote enforcement of the GPL’s provisions difficult.⁷¹

Sapna Kumar has characterized GPL v 2 as a “failed contract” because it “lacks a meeting of the minds with regard to consideration.”⁷² Although contract law does not require a “meeting of the minds” and formation issues are analytically distinct from the question of consideration, Kumar is rightly concerned that software users do not always have adequate notice of the license such that contract law would not recognize the formation of a contract.⁷³ Another commentator adds that “the licensee’s consideration is his promise to abide by the copyleft clause,” but notes that the user may not see the terms of use so that no contract is formed.⁷⁴ Of course, these observations do not mean that contract law does not apply to open

⁶⁹ The GPL is a License, Not a Contract, Which is Why the Sky Isn’t Falling, available at <http://www.groklaw.net/article.php?story=20031214210634851> (last visited Jan. 17, 2009) (quoting Moglen).

⁷¹ On injunctions, see 17 U.S.C. 502 (authorizing injunctions in copyright cases); see also *Phelps & Assocs. v. Galloway*, 492 F.3d 532 (4th Cir. 2007). On privity issues, see *McGowan*, supra note , at 297-98 (“GPL may not bind downstream users who take code from someone other than the rights-holder because persons who encounter license terms that run with the code will not be in privity with the rights holder. . . . The privity concern might not be dispositive in any event. The GPL is a nonexclusive, transferable license One might view distribution of GPL code as simply a transfer within the terms of a license . . .”).

⁷² Kumar, supra note 2, at 16.

⁷³ *Id.* at 17-19.

⁷⁴ Gonzalez, supra note , at 200 (stating, “The vulnerabilities of the . . . GPL licensing method are: (1) the recipient of the software may not receive a notice of the license before delivery, and (2) no signature or other manifestation of assent is generally required. Moreover . . . the recipient may not get a copy, physical or digital, of the . . . GPL license”).

source licenses, only that contract law will not enforce licenses without sufficient notice and assent.

For a time, the FSF insisted, as it had with GPL v 2, that v 3 is not a contract: However, it deleted language to that effect in the final wording of GPL v 3.⁷⁵ GPL v 3 deals with a number of issues that arose over time in the licensing of open source software.⁷⁶ For example, GPL v 3 requires licensees to license essential patents to downstream users.⁷⁷ Kumar states,

It appears most likely that [breach of contract] is how GPLv3 will be enforced in the U.S. Unlike with GPLv2, a licensee under [v 3] has a number of affirmative obligations, such as providing a license on essential patents to all downstream users. Such obligations cannot be enforced by the Copyright Act alone; a state contract action would also be required.⁷⁸

Courts, of course, will ultimately determine whether GPL v 2, v 3, or open source licenses generally are contracts. In Germany where consideration is not required for a contract to be enforceable, courts treat GPL v 2 as both a contract and license.⁷⁹ The most important U.S. case to date is *Jacobsen v. Katzer* which addressed not the GPL but another open source license called the Artistic License.⁸⁰

In *Jacobsen*, the defendant failed to comply with a number of provisions of the Artistic License:

Specifically, [Katzer's] software did not include (1) the author's names, (2) [] copyright notices, (3) references to the COPYING file [which contains the Artistic License], (4) an identification of [Jacobsen] as the original source of the definition files, and (5) a description of how the files or computer code had been changed from the original source code. The [Katzer] software also changed various computer file names . . . without

⁷⁵ Raymond T. Nimmer, Law of Computer Technology, § 11:19 (“ . . . GPL 3.0 retains the general sense that the transactions it governs directly are noncontractual, although in the final draft after a lengthy revision process, the drafters deleted language specifying that the license was not a contract.”).

providing a reference to the original files or information on where to get the [s]tandard [v]ersion.⁸¹

The district court held that Jacobsen’s cause of action was for breach of contract not copyright infringement, holding that the terms Katzer violated were not limitations on the scope of the license (and thus remediable under copyright law) but contractual in nature.⁸²

The Federal Circuit’s decision on appeal is noteworthy for two reasons - (1) its commentary on consideration; and (2) its holding that demonstrates the utility of both contract and copyright law in enforcing open source licenses. We concentrate here on the first and turn to the second in Part III below. With respect to consideration, the court stated:

Traditionally, copyright owners sold their copyrighted material in exchange for money. The lack of money changing hands in open source licensing should not be presumed to mean that there is no economic consideration, however. There are substantial benefits, including economic benefits, to the creation and distribution of copyrighted works under public licenses that range far beyond traditional license royalties. For example, program creators may generate market share for their programs by providing certain components free of charge. Similarly, a programmer or company may increase its national or international reputation by incubating open source projects. Improvement to a product can come rapidly and free of charge from an expert not even known to the copyright holder.⁸³

The court thus appeared to recognize that the Artistic License was supported by consideration and a contract.

B. Most Open Source Licenses Are Contracts

We believe that the *Jacobsen* court’s decision is correct. We also think that although there are a range of open source licenses, most contain terms that should place them within contract law’s domain and lack of consideration should not prevent these licenses from being

⁸¹ Id. at 1376-77.

⁸² *Jacobsen v. Katzer*, 2007 WL 2358628, at *7 (N.D. Cal. 2007).

⁸³ *Jacobsen*, 535 F.3d at 1379. (“The Eleventh Circuit has recognized the economic motives inherent in public licenses, even where profit is not immediate. *See Planetary Motion, Inc. v. Techsplosion, Inc.*, 261 F.3d 1188, 1200 (11th Cir.2001) (Program creator “derived value from the distribution [under a public license] because he was able to improve his Software based on suggestions sent by end-users.... It is logical that as the Software improved, more end-users used his Software, thereby increasing [the programmer's] recognition in his profession and the likelihood that the Software would be improved even further.”)”).

treated as contracts.⁸⁴ Here we clarify and elaborate on the type of terms that should do so. For example, and most obviously, contract law applies to the license if a licensee pays for the software or agrees to pay for maintenance or integration services. Contract law should also apply if the licensor and licensee exchange source code. These transactions mirror the twentieth century exchange of hard goods for money or other consideration.

More challenging are open source licenses that do not contemplate any of the above exchanges, but simply authorize licensees to transfer, copy, or modify the software, subject to certain conditions. Such “terms of use” often include (and we focus on) the “copyleft” and “same terms” provisions discussed earlier.⁸⁵ These terms should also constitute consideration under the bargain theory. Recall that general contract law court finds consideration if a condition constitutes more than is necessary to transfer a gift.⁸⁶ Terms of use, such as “copyleft” and “same terms” are not necessary to convey software and therefore constitute consideration under general contract law if at least part of the vendor’s motive (however insubstantial), judged objectively, is to extract agreement to the terms of use.⁸⁷ Vendors in the open source movement make no secret about their desire to create a new paradigm of openness, to enhance the freedom and capabilities of software users, to foster innovation, and to create public acceptance and familiarity with their intellectual property framework.⁸⁸ The motive to further one or more of these goals, without more, should be sufficient to satisfy the bargain requirement. But often there is more. A licensor may benefit indirectly, for example, by entering lucrative service and

⁸⁴ See Matthew D. Stein, *Rethinking UCITA: Lessons from the Open Source Movement*, 58 *Maine L. Rev.* 157 (2006) (discussing the range of licenses). As of 2006, there were “nearly sixty separate licenses approved by the Open Source Initiative.” *Id.* at 196.

⁸⁵ See *supra* notes , and accompanying text.

⁸⁶ See *Plowman v. Indian Refining Co.*, 20 F. Supp. 1, 5 (E.D. Ill. 1937) (retired employees’ trip to employer’s office to receive their pay not consideration); *Affiliated Enterprises, Inc. v. Waller*, 5 A.2d 257, 259-260 (Del. 1939) (distinguishing “mere incidental or friendly detriments, not intended as ingredients of a bargain” from “bargained-for consideration.”).

⁸⁷ For a discussion of the position that open source software demands special legal treatment, see Jean Braucher, *New Basics: 12 Principles for Fair Commerce in Mass-Market Software and Other Digital Products*, working paper, May 27, 2005. For another view, see Ieuan G. Mahoney & Edward J. Naughton, *Open Source Software Monetized: Out of the Bazaar and into Big Business*, 21 *N. 10 Computer & Internet L.* 1, 1 (2004) (“The open source movement may have been born as a political ideology, a communitarian alternative to corporate profit seeking and the ‘privatization’ of technical innovation, but it has been transformed into a commercial enterprise.”).

⁸⁸ See *supra* notes , and accompanying text.

update contracts or by gaining publicity for other more entrepreneurial projects.⁸⁹ Even without such benefits, collaborators work in a “gift culture in which members compete for status by giving things away.”⁹⁰ Contract law (like the court’s ruling in *Jacobsen*) long has recognized that a motive to increase one’s standing as opposed to pure altruism may be sufficient to constitute consideration.⁹¹ Further, developers learn state-of-the-art technology and “build their reputation[s]” by participating in the open source movement.⁹² Thus, consideration supports open source software license grants under traditional contract law.⁹³

But what of Moglen’s objection that an open source license is no different from, for example, an invitation (license) to visit an owner’s land?⁹⁴ The implication of this observation is that even if the invitation includes restrictions, concerning, for example, the time of the visit or permitted uses of the land, the restrictions simply define and narrow the scope of the license, which should not be treated as a contract if a contract requires a promisor to extract something from the promisee. Open source licenses that contain “copyleft” or “same terms” restrictions, however, go beyond simply defining the boundaries of the license. If the landowner required the

⁹⁴ See supra notes , and accompanying text.

invitee to use knowledge gained by the visit in a special way or restricted the transfer of that knowledge to a third party, then the license to visit the land would constitute a bargain and a contract under traditional contract law.

Moreover, as we developed in Part I, contract law has evolved to find consideration when enforcement of promises would increase society's welfare and the enforcement is capable of judicial administration.⁹⁵ The social value of the FOSS movement is unquestionable. We have already noted that many of the most important and complex software programs are open source and private companies have embraced the model.⁹⁶ Further, without doubt open source has achieved its goal of fostering innovation that makes more and more programs available to the public, often for free.⁹⁷ In addition, the open source philosophy has spread to other frameworks, increasing people's "access to knowledge" in a wide variety of settings.⁹⁸ Finally, the collaborative model arguably promotes better quality and reliable software in large part because skilled participants have the luxury of ample time to devote to software development⁹⁹ and without fear of a lawsuit based on copyright or another intellectual property cause of action.¹⁰⁰

⁹⁵ See supra notes , and accompanying text; see also Wessman, supra note , at 14 (observing "the trend in modern contract law to enforce all commercial promises—even though some are technically gratuitous").

¹⁰⁰ Coar, supra note .

Not only does open source benefit society, but courts should have little difficulty applying a contractual framework to open source licenses. We have already shown that open source meets the technical requirements of a bargain. We now set forth another example of how open source nicely lends itself to a contract-law analysis.

Even if an open source license is supported by consideration and the licensee has reasonable notice of the terms, a licensor might argue that there is no binding contract until the licensee modifies or distributes the software for two reasons. First, a court might find that the contract lacks mutuality of obligation—the licensee can choose not to modify or distribute the software and therefore have no obligation under the license. Agreements that do not evidence a commitment from both parties are not enforceable as contracts.¹⁰¹ Second, a court might determine that the licensor made an offer for a unilateral contract—“if you modify or distribute the software, I promise not to sue you for infringement provided you abide by the restrictions.”¹⁰² The licensee has not accepted the offer until the licensee modifies or distributes the software.

The better view, however, is that a contract is formed when a licensee acquires the software, such as by downloading it, even if the licensee does not have to manifest assent to the restrictions and even before the licensee modifies or distributes the software. The act of acquiring the software (assuming the licensee has knowledge of the restrictions) constitutes an implied-in-fact acceptance of the terms of use. At that point, the licensee has made a commitment that narrows its freedom, namely to abide by the restrictions if it modifies or distributes the downloaded software.¹⁰³

III. Open Source Licenses Should be Treated as Contracts

As we have discussed, under the technical rules of consideration doctrine as it has developed, most open source licenses are supported by consideration. Here we turn to broader policy questions and argue that open source licenses nicely fit into the category of promises that contract law *should* enforce.

In short, clarifying the law applicable to open source licenses through enforcement of the licenses as contracts should help to facilitate and encourage open source development. As we

¹⁰¹ See, e.g., *De Los Santos v. Great Western Sugar Co.*, 348 N.W.2d 842 (Nebraska 1984).

¹⁰² See generally Mark Pettit, *Modern Unilateral Contracts*, 63 B.U. L. Rev. 551 (1983).

¹⁰³ If the court finds that the license is an enforceable contract even before the licensee modifies or transfers the software than the licensee would have warranty rights unless those were disclaimed.

noted in Part II, no one should dispute the social utility of open source software development.¹⁰⁴ As a practical matter, however, as vendors market more and more open source software commercially, disputes will arise. By providing a framework for adjudication that respects the structure of the movement and (as we will shortly show) the importance of intellectual property law to it, contract law provides a measure of certainty that will prevent the inevitable disputes from undermining the movement.

We have noted that some open source proponents adamantly oppose the contract conception in part because of fears about formation requirements, privity rules, and the lack of injunctive relief (in contrast to copyright law).¹⁰⁵ We have problems understanding these fears. First, the benefits of a contractual framework for open source distributors outweigh these concerns even if they were well-founded. If open source licenses are not contracts, licensors more likely would be liable for defective software or intellectual property infringement than if they can disclaim liability in an enforceable contract.¹⁰⁶ In fact, under a contract model, even without a disclaimer, open source vendors are not likely to be liable for breach of warranty such as UCC § 2-314's implied warranty of merchantability that applies to “professional[s] in business.”¹⁰⁷ Hobbyists, by definition, are not in the software business and do not “deal in software of the kind transferred” or hold themselves out “*by . . . occupation as having knowledge or skill peculiar*” to the software.”¹⁰⁸ The hobbyist’s “occupation,” again by definition, is not engineering the software. Further, vendors of open source software that do not qualify as hobbyists often should have little to fear from contract warranty law as well because the nature of open source software development—multiple collaborators who often exchange code of software still in development—means that users should reasonably expect that the licensor is transferring the software “as is.”¹⁰⁹

Moreover, the fears of contract opponents are *not* well founded. Although under current practices open source licenses rarely satisfy the notice and formation requirement of contract-formation law (that Stallman rather improvidently considers a “pain in the neck”),¹¹⁰ these would

¹⁰⁹ See American Law Institute, *Principles of the Law of Software Contracts*, Chapter 3, Summary Overview (Proposed Final Draft May 2009) (hereinafter “ALI Principles”).

¹¹⁰ See supra notes , and accompanying text.

not be difficult to satisfy. Courts generally approve of the clickwrap formation process for software downloads that requires for enforcement that a licensee click “I agree” at the end of or adjacent to an e-standard form before completing a transaction.¹¹¹ Under current technology, moving to clickwrap should not prove costly to open source transactors, nor would attaching terms of use to packaged software.¹¹²

Another important reason for recognizing open source licenses as contracts is that contract and intellectual property laws (we focus on copyright here) work well together in supporting the FOSS model and provide a useful compliment of remedies for breach of a license. In fact, with this compliment of remedies, open source licensors should have no misgivings about the availability of injunctive relief or worry about the privity problems of contract law. If a user breaches a term of the license, courts generally analyze whether the provision constitutes a condition defining the scope of a license or a mere promise (also called a covenant).¹¹³ If a licensee exceeds the scope of the license, under copyright law the licensor can enjoin the usage and privity issues are irrelevant. If a licensee breaks a promise enforceable under contract law, the licensor can collect damages. Of course, exceeding the scope of a license may constitute infringement *and* a breach of contract, but a court may hold the contract breach preempted by copyright law.¹¹⁴ State law determines whether a provision is a condition or covenant or both.¹¹⁵

¹¹¹ ALI Principles, *supra* note , Chapter 2, Topic 2, Summary Overview.

¹¹² *Id.* at § 2.02, cmt. f.

¹¹³ *Id.* at § 3.11 & Rptrs. n. b. (setting forth the general rules and sources).

¹¹⁴ See *id.* Whether a licensor could phrase its entire agreement as stating conditions on scope is unclear. The benefit of this strategy for a licensor is that all breaches would be infringements so that the licensor could sue in federal court and receive injunctive relief under the Copyright Act. Addressing this question is beyond the scope of this paper. We argue, however, that there is no need for a licensor to engage in this strategy. Rather, a combined strategy of reliance on copyright and contract law can serve the FOSS community well.

¹¹⁵ Courts may look to a variety of factors including the language of the license, course of performance, course of dealing, usage of trade, and other extrinsic evidence, and the placement of the term in the license. The *Jacobsen* court’s discussion which looks to the language of the agreement and the structure of the transaction is not atypical:

The Artistic License states on its face that the document creates conditions: “The intent of this document is to state the *conditions* under which a Package may be copied.” (Emphasis added.) The Artistic License also uses the traditional language of conditions by noting that the rights to copy, modify, and distribute are granted “*provided that*” the conditions are met. Under California contract law, “provided that” typically denotes a condition. . . .

Under this framework, licensors have nothing to fear from contract law, but instead should prefer its application.

Conclusion

Our fast-paced age of electronic agreements that ostensibly govern transactions as diverse as downloading software, ordering goods, and engaging in collaborative development projects raises questions regarding the suitability of contract law as the appropriate legal framework. While this question arises in many settings, we focused here on the free and open source software (FOSS) movement because of the maturity and success of its model and the ubiquity of its software. We explored in particular whether open source licenses are supported by consideration, and argue that they are, and that open source licenses are contracts. We further argued that a contractual framework working in tandem with the intellectual property laws is the appropriate legal structure to govern FOSS transactions. Our discussion holds implications for the understanding of consideration doctrine and contract law generally outside of the FOSS example and, indeed, for collaborative development and electronic agreements generally.

The conditions set forth in the Artistic License are vital to enable the copyright holder to retain the ability to benefit from the work of downstream users. By requiring that users who modify or distribute the copyrighted material retain the reference to the original source files, downstream users are directed to Jacobsen's website. Thus, downstream users know about the collaborative effort to improve and expand the SourceForge project once they learn of the “upstream” project from a “downstream” distribution, and they may join in that effort.

The District Court interpreted the Artistic License to permit a user to “modify the material in any way” and did not find that any of the “provided that” limitations in the Artistic License served to limit this grant. The District Court's interpretation of the conditions of the Artistic License does not credit the explicit restrictions in the license that govern a downloader's right to modify and distribute the copyrighted work. The copyright holder here expressly stated the terms upon which the right to modify and distribute the material depended and invited direct contact if a downloader wished to negotiate other terms. These restrictions were both clear and necessary to accomplish the objectives of the open source licensing collaboration, including economic benefit. . . .
