

New cembrane-type diterpenoids from Bornean soft coral *Nephthea* sp. with antifungal activity against *Lagenidium thermophilum*

ABSTRACT

Three new cembrane diterpenes, nephthecrassocolides A-B (**1–2**) and 6-acetoxy nephthenol acetate (**3**) along with three known compounds, 6-acetoxy-7,8-epoxy nephthenol acetate (**4**), epoxy nephthenol acetate (**5**) and nephthenol (**6**) were isolated from one population of *Nephthea* sp. Their structures were elucidated based on spectroscopic data analysis and the antifungal activities of compounds **1–6** were evaluated.
