Supervisor candidates tell off-shore oil plans

By Meda Freeman
Staff Writer

Candidates for the San Luis Obispo County Board of Supervisors had a chance Monday night to answer questions regarding their positions on environmental issues in the county, especially off-shore oil drilling, water use and urban growth.

The question and answer session, which kicked off Ecology Awareness Week on campus, took place in the Cal Poly Theatre and was sponsored by Students for Social Responsibility. Eleven of the 14 can-

didates from the 1st, 3rd and 5th Districts were present at the forum.

The questions were directed by Tom Fulks, government reporter for *The Five Cities Times-Press Recorder*; Ian McMillan, naturalist and long-time county rancher and Richard Kranzdorf, a Cal Poly political science professor.

Most candidates agreed that if elected, they would advise their constituents to vote against Measures A, B and C, Shell Oil's San Miguel off-shore project. They also agreed that the county's regulatory climate is not tough enough when

negotiating with oil companies for off-shore drilling.

"I'm opposed to Measures A, B and C," said Evelyn Delaney, 3rd District incumbent. "I believe the oil company simply wore down the county's staff. We have a small, naive staff — they don't. And I don't think we got the best deal we could have gotten. If we're going to deal with the energy crisis, we need more serious conservation management and we need to develop alternative fuels."

Doug Beckett, 1st District candidate, said that there is no cost too high to pro-

tect Earth. Dave Blakely, 5th District candidate, agreed.

"We need to get the oil companies off the San Luis Obispo coastline," Blakely said. "No air pollution is acceptable. There needs to be more control by the supervisors over the federal government."

"It's not a matter of being tough enough," said incumbent Carl Hysen of the 5th District. He said cooperation with the oil companies is necessary because the oil is federally mandated, so the companies can always process it off-shore. The coun-

Scientist to speak at graduation

By Christine Kohn
Staff Writer

The executive officer of the country's leading general science organization will be the featured speaker for Cal Poly's 1988 spring commencement on June 11.

Alvin W. Trivelpiece, a 1953 electrical engineering graduate of Cal Poly, heads the Washington, D.C.-based American Association for the Advancement of Science (AAAS). Selection of the 57-year-old physicist was announced by Cal Poly President Warren Baker. Trivelpiece is the third consecutive Cal Poly alumnus to be a commencement speaker. Last June, Voyager designer Burt Rutan spoke at the graduation ceremony.

Although Trivelpiece does not know what he plans to speak about at this time, he said in a telephone interview he is pleased at the invitation and enthusiastic about coming back.

Trivelpiece's research has focused on plasma physics, controlled thermonuclear research and particle accelerators. He holds several patents on accelerators and microwave devices, and is the author or co-author of more than 100 technical reports and books.

Even though Trivelpiece has made many accomplishments in his life, there is no single thing he is most pleased with.

"I'm just proud that I was given the opportunity to do

Alvin Trivelpiece

research, to discover and be able to report on those discoveries," he said.

The Stockton native earned his advanced degrees from Caltech. He was a 1958-59 Fulbright scholar at Delft Technological University in the Netherlands and a recipient of a Guggenheim fellowship in 1967.

Trivelpiece was honored in 1978 by the Cal Poly School of Engineering as its Distinguished Alumnus.

Trivelpiece, who was named AAAS executive officer in April 1987, now oversees all of the association's activities and programs. He is also publisher of

Science, AAAS' weekly journal.

When Trivelpiece was named AAAS executive officer, Gerald Piel, AAAS board chairman, said he "brings to his new post a background of achievement and leadership... He has a strong hand in the making of science policy and the renewed commitment of the federal government to basic research."

He has also been called one of the most successful salesmen in the history of science. In January 1987 he convinced President Reagan to push aside budget considerations and endorse the proposed superconducting supercollider and atom smasher — the most expensive non-space science project ever proposed at \$4.4 billion.

In 1981, prior to his job with the AAAS, Trivelpiece held a presidential appointment as assistant secretary for energy research with the U.S. Department of Energy.

He managed the department's programs for basic energy sciences, high energy and nuclear physics, health and environmental research and magnetic fusion energy. He was also responsible for the department's non-weapons multi-purpose laboratories and energy education and training activities.

Besides a host of other positions, Trivelpiece taught physics at the University of Maryland and was a professor of electrical engineering at UC Berkeley.

Paris program planned in spite of moratorium

By Carrie Dempsey
Staff Writer

Despite a moratorium on overseas programs by the California State University Chancellor's Office, plans continue at Cal Poly for the first-ever Paris study program.

The resident director of the Paris study program, Odile

'The Chancellor's Office was concerned with the ... proliferation of unauthorized overseas programs.'
— William Little

Clause, said that despite the moratorium, the trip to Paris will happen fall quarter.

"The Chancellor's Office was concerned with the excessive proliferation of unauthorized overseas programs," said William Little, head of the foreign languages department. But conditions have changed and the moratorium will be lifted on April 15.

"The program is expected to be approved at that time

because it is modeled on the London Study program which is considered a high-quality program," said Little.

The program was developed and sponsored by the School of Liberal Arts in conjunction with the foreign languages department. Jon Ericson, dean of the School of Liberal Arts, said he wants the Paris program to be campus-based, like London Study.

A student information meeting will be held tomorrow at 11 a.m. in Chumash Auditorium.

"This meeting should give a good indication of student interest," said Ericson.

Students accepted into the program will be required to have a year of college French or the equivalent and maintain a 2.5 minimum grade-point average. The program will focus on student participation in French language and culture.

Students will take classes at the Foyer des Lycennes, a French prep school, for college credit in language, literature, culture and humanities. Courses from Cal Poly's regular curriculum will be taught by two Cal Poly professors.

Harbor jeopardizes Nipomo Dunes complex

By Elizabeth Scott-Graham

One of the major threats to the integrity of the entire Nipomo Dunes complex is the proposed San Luis Obispo County Multi-Use Harbor.

This harbor project was originally proposed for the mouth of the Santa Maria River, by Ger-

rard Parsons of the Port San Luis Harbor Commission and George Smith, a Santa Maria resident and founder of Smith Trucking. The project is now proposed to be located on the northern boundary of the Le Roy Trust-Union Oil field property, near Nipomo.

It is difficult to describe with any certainty the scope of this project, except that harbor proponents indicate there will be numerous hotels, motels, restaurants, residential and commercial

sites developed adjoining the harbor. When the proponents speak of the project, they most often refer to the Channel Islands harbor as their model.

The harbor's estimated cost, at the very least, is \$200 million. The bonds will be paid by user fees. In order to generate this kind of income, it will be essential to lease large segments of the property for commercial and residential development.

The People for a Nipomo Dunes National Seashore is often

accused by the harbor proponents of wanting to tie up the "whole 14 miles of the coastal dunes." Our response to this allegation is merely a matter of perspective. If you take the 25 miles of coast between the southern boundary of Vandenberg Air Force Base and the northern boundary of Diablo Canyon nuclear power plant, you have multiple uses by man.

There is energy generation by P.G. & E. at Diablo. You have

Fragile existence

Officials in Corazon Aquino's government may be facilitating the demise of the very entity they are trying to save — the Philippines. The latest word is that Manila is considering ridding the country of the United States' military presence. If Aquino follows through, she might as well kiss off the revolution she has initiated. Without the presence of American armed forces, the foundation upon which the Philippines rests is likely to crumble.

That foundation, at best, is fragile. Just a few months ago, the Philippines teetered dangerously close to ruin as a coup headed by several Philippine army officers proved that Aquino is still vulnerable. Aggravating the problems is the burgeoning communist insurgency and the faltering economy.

Americans stationed at Subic Bay Naval Base and Clark Air Force Base can check both trends. Although U.S. soldiers are not actually fighting the rebels, they give Aquino a viable backup should the rebellion get out of hand. The communists will not push the issue, though, since they know American involvement would spell their doom. More importantly, the Philippine economy needs the bases. Subic Bay and Clark, which employ thousands of Filipinos, combine to be the nation's second largest contractor. Without the revenue, the Philippines would not be far from fiscal shambles. And by booting the Americans, Aquino risks losing the sizable aid package she gets from the United States.

Clearly, the positives outweigh the negatives. The Philippines is like a delicate ecosystem. With one entity eliminated, everything else is left tenuous.

Our choices control fate of ozone

Sweat dripped off my body as we sang American Indian spirituals about the healing of the Earth. A cup of water was passed to me and I started the next song with a prayer.

I prayed that enough people in our civilization will learn to respect the Earth as the original occupants of this land did, and that we will finally realize that every action we take is significant to life as a whole. I then drank the water, sprinkled some on the hot rocks in the middle of the sweat tent, sang one more song and opened the tent flap to a bright sun.

With the mindset of the Indians, I thought of the significance of the fragile inter-relationship of the home we call Earth. Then it hit me just how far we have distanced ourselves from the truth. The truth is we are part of the ecosystem of life. When we mess with parts of it, we are biting our own tail.

One example of this is the depletion of upper-atmospheric ozone by an alarming 5 percent in just the past eight years. Complete holes appear above Antarctica. Life depends upon this thin layer that shields the earth from more than 90 percent of the sun's dangerous ultraviolet radiation.

It was not until the ozone layer formed 500 million years ago that life forms could creep onto the land. The depletion not only causes more cases of skin cancer; continued depletion will harm animal vision (humans included). Green plants are also due for trouble that could endanger all life.

Unfortunately, this phenomenon is not proving to be a naturally occurring cycle. It is caused most certainly by pollution from chemicals called chlorofluorocarbons (CFC). CFC are used in aerosol sprays, refrigerants, fire extinguishers and styrofoam.

After a 15-year journey, a CFC molecule reaches the stratosphere and gets split by sunlight into, among other elements, atoms of free chlorine. The chlorine reacts with ozone to form oxygen and chlorine oxide. That mixture then breaks up to again form chlorine. Scientists estimate that a single chlorine atom can destroy 100,000 ozone molecules.

The United States banned the use of CFC in

CAPTAIN ECOLOGY

Joe Clokey

aerosol sprays in 1979, which reduced world CFC output by 25 percent. Unfortunately, this was more than offset by the increased use of CFC in air conditioners, solvents and plastic cups.

There are about 1 million tons of CFC produced worldwide each year. It wasn't until a few years ago that nations started believing the data that shows the ozone hole above Antarctica is about the size of the United States. That realization got the red lights flashing.

Led by the U.S. (due partly to intense lobbying by environmental groups), 24 nations and the European Economic Community signed an agreement in Montreal last year that will reduce worldwide CFC production 40 percent during the next 10 years. This is a good first step. Unfortunately, it is not nearly enough.

CFC have incredible longevity, remaining in the air 100 years or more. As a result, there is a huge stockpile in the atmosphere. The consensus is that just to stabilize levels would require at least an 85 percent cut in emissions. Hopefully it won't take a break in our food chain for nations to soon sign another, stronger accord.

Meanwhile, as citizens of the country that produces the most CFC, we can stop purchasing styrofoam. The simple action of deciding what type of cup to use actually affects our survival, so let's live with the truth of inter-relationships in mind.

LETTERS TO THE EDITOR

Jackson would be worst prez ever

Editor — I can't help but wonder what caused such a huge swing in Pete Brady's views. Ronald Reagan and Jesse Jackson are on almost opposite ends of the spectrum, and some kind of event/revelation has drastically changed Brady's political alignment — in my opinion, too drastically.

I will never vote for Jesse Jackson. This is not because I'm a racist, a warmonger, an elitist, etc. I'm none of those things. I am a member of no political party and consider myself a moderate. I am, in some aspects, liberal (I support a national socialized medical program), in other ways, conservative (I support SDI research). I will not vote for Jackson not because he is unelectable. Indeed, I'm afraid he might be electable. I will not vote for him simply because I feel that he would prove to be the worst president in our history.

Jackson is not just liberal, he is extreme left. His economic agenda is a sure road to economic ruin and technological stagnation. His isolationist foreign policy (he does not support the Afghan resistance, for example) is a throwback to the pre-World

War I era and has no place in today's world. It would lead not only to a loss of U.S. prestige but also to a lessening of freedoms worldwide and increasing tensions. His association with radical leaders such as Arafat, Khadaffi and Farrakhan are indicative of Jackson's radicalism as well as, unfortunately, prejudice. Each of these men is vigorously anti-Jewish and Jackson's own remarks (referring to Jews as "hymies" and saying, "I'm sick and tired of hearing about the Holocaust") are disgraceful. These remarks are tolerated because, to the shame of all Americans, this country once engaged in slavery and is still plagued by racism and hatred. To attack Jackson is to risk being branded a racist and few politicians, or people for that matter, are willing to take that risk. Had Reagan closely associated with South Africa's Botha or stated, "I'm sick and tired of hearing about slavery and racism," hundreds of thousands would be calling for his resignation/impeachment. Yet what Jackson has done is equivalent to this fictional situation and yet hundreds of thousands still continue to support him. I still hope that the majority of voters will not vote for him, seeing the hypocrisy of his ways,

his complete lack of political experience and the realities of his foreign policy and economic agenda.

DAVID LAWLER

Race not the issue

Editor — I am writing in response to Pete Brady's article printed last week regarding his support of Jesse Jackson.

I, too, find Jesse Jackson to be the most appealing candidate. His zeal and apparent sincerity are refreshing in the field of bland and reserved opponents. I would be proud to vote for a black American for president; race is not an issue in my book.

But I will not vote for Jackson for one reason — he is (was) a religious leader. A religious leader has no place in the power structure of the United States government. Period.

Former patient gets life term for attacking doctor, family

LOS ANGELES (AP) — A woman who pleaded guilty to shooting and assaulting her former psychologist and his family was sentenced to life in prison Tuesday.

Superior Court Judge David A. Horowitz sentenced Kimberly A. Gracyalny to life in prison for ambushing neuro-psychology specialist David Fox, his wife and daughter at their Fairfax-area home on Dec. 20.

Gracyalny, 30, sat impassively as the sentence was read, said court clerk Darrel Parker.

Gracyalny was also sentenced to two years in prison for use of a gun and five years for attempting to inflict great bodily harm, said her attorney Leon Hitch, a deputy public defender.

"It was the sentence she expected under the circumstances," Hitch said.

Gracyalny hid in the Fox family's front yard and opened fire with a handgun as they returned home, chasing them around the house to the back yard before the couple was able to subdue her, authorities said.

During the attack, Fox, 34, was shot in the arm.

Nation

Drug smuggler tells Congress of base offer by Panama ruler

WASHINGTON (AP) — A convicted marijuana smuggler told Congress Tuesday of an offer eight years ago by then-Panamanian ruler Omar Torrijos and an aide — Manuel Antonio Noriega — to use an island off Panama for drug shipments.

But the smuggler, Michael P. Vogel, said he and an associate rejected the offer because the two Panamanian leaders "were being extremely, extremely greedy."

Vogel said he traveled to Panama in late 1979 or early 1980 with a Cuban associate who was interested in establishing a shipment base for drugs. They met with Torrijos and Noriega, who now is Panama's military ruler and under U.S. indictment on drug charges, for about three hours, he testified.

"They wanted 'X' amount of dollars for each pound of marijuana," or about \$100,000 per trip, Vogel said, an amount out of proportion for the small shipments he had planned.

Vogel also described for a narcotics subcommittee the elaborate methods he and other smugglers developed.

World

Extra troops sent to Panama to protect U.S. citizens there

PANAMA CITY, Panama (AP) — The first of an extra 1,300 U.S. troops were sent to Panama on Tuesday to increase security for American soldiers and citizens in the face of a political and economic crisis.

The reinforcements and a squadron of 26 helicopters were intended by the Reagan administration as a signal to Gen. Manuel Antonio Noriega, the de facto ruler whom Washington has been urging to step down.

The buildup, ordered last week to counter what the Pentagon called Noriega's "heavy-handed tactics," will push American troop strength along the 50-mile-long Panama Canal to 11,800 officers and men. Noriega is head of the 15,000-man Defense Forces.

The action followed reports of harassment of U.S. citizens by Panamanian soldiers and the temporary arrest of several American reporters during a police raid on opposition headquarters in a Panama City hotel.

The Panamanian government has repeatedly accused the Reagan administration of preparing for an invasion.

DUNES

From page 1

harbor facilities at Port San Luis, commercial and residential use at Avila Beach, residential, tourist and commercial use in Shell Beach, the city of Pismo Beach, a heavily used State Park, an off-highway vehicle recreation area north of the dunes and a military base to the south. The dunes are surrounded by agriculture and some parts of the area, like the Santa Maria River mouth, have cattle grazing.

Our goal to preserve the few miles in between for passive recreation and wildlife habitat hardly seems like "sewing it all up for the preservationists."

Another argument the proponents make in favor of the harbor is that it will decrease on-shore air pollution because the off-shore oil platform supply boats will not need to travel all the way from Port Hueneme to the platforms off the Central Coast. Having supply boats dock at the harbor will not lead to a net amount of on-shore air pollution because the materials taken to the platforms will come into the Central Coast by trucks which contribute possibly even more diesel pollutants on the freeways.

The harbor proponents would have the public believe that the

area in which they would site the harbor is not an environmentally sensitive or pristine area because of the presence of the Union Oil field.

The reality is that this is as sensitive as any other area of the dunes. In actuality, the bulk of the oil field is in excellent condition in terms of the native vegetation because this area was never disturbed by dune buggies.

Further, when the oil has been depleted, Union Oil must remove all equipment and return the field to its prior vegetative condition.

The critical question facing

local people is whether we want to see a development, the magnitude of the Channel Islands, right in the middle of the unique eco-system of the dunes.

National Seashore status is granted by law only to those areas environmentally intact and valuable. If a harbor were placed in the middle of the dunes, the integrity of the entire system would be jeopardized, if not destroyed.

Attorney Elizabeth Scott-Graham is president of People for Nipomo Dunes National Seashore and founder of ECO-SLO.

Meese chooses two justice replacements

WASHINGTON (AP) — Attorney General Edwin Meese III on Tuesday announced replacements for the No. 2 and No. 3 positions in the Justice Department, but was unable to fill the post vacated by last week's protest resignation of Assistant Attorney General William Weld.

Meese said he would recommend John C. Shepherd, a past president of the American Bar Association, and Francis A. Keating II, a top Treasury Department law enforcement official, for the two top-level Justice Department posts. Shepherd would replace Depu-

ty Attorney General Arnold Burns. He resigned a week ago along with Weld, then head of the criminal division, out of what department sources said was concern that the criminal investigation of Meese by independent counsel James C. See **MEESE, back page**

PARIS

A future not so certain

Cystic fibrosis fails to discourage this Cal Poly senior

By Christine Kohn, staff writer

You have it from the day you are born. You keep it until the day you die. And it always gets worse. Until the day someone finds a cure.

"On that day, cystic fibrosis (CF) will stand for 'cure found,'" said Karen Dew, a Cal Poly human development senior who was diagnosed to have CF when she was 10 months old.

"It's not really painful," she said quietly, "but it feels like I have a 10-pound weight on my chest. And when I breathe in, it feels like someone is squeezing my windpipe."

Except for her slightly shaking hands, her 90-pound, 5-foot-5 body is frail but steady. She coughs continuously.

'Sometimes I get doubts about why I plan for my future. But I just have to keep reassuring myself and keep thinking about those people I know (with CF) who are in their 30s.'

— Karen Dew

"When someone dies, it's because their lungs are so overworked that they collapse," said Dew. "You would think the lungs would get stronger with the coughing, but it just tires them out."

CF is a genetic disease which occurs in one out of every 2,000 live births. An overproduction of mucus obstructs air flow in the lungs and clogs the pancreas. This prevents the passage of enzymes to the stomach so that food does not digest completely.

The average life span for a person with CF is 20 years. Dew is 21.

"Sometimes I get doubts about why I plan for my future," said Dew. "But I just have to keep reassuring myself and keep thinking about those people I know (with CF) who are in their 30s."

Dew plans to do mission work in another country for two years after she graduates from Cal Poly.

"I'd like to work with the poor in either Toronto or London," said Dew. "These cities have large CF centers in case anything happened to me. It's scary thinking about going to another country when you have a disease."

She would later like to get her Ph.D. in genetic counseling and help families who have children with genetic disorders cope with the disability.

"I know the stress and pain a disability can create," said Dew. "I'd like to be an inspiration to people so that when they have a problem they can think, 'I can put up with it — Karen has to put up with it all of the time.'"

As part of her treatment, Dew sometimes receives antibiotics through a home IV, has an annual hospital visit, and takes numerous vitamins

Karen Dew

and oral enzymes, but she says she is not letting the disease control her life.

"In junior high and high school, I had to go to the hospital every four months. Since I've been in college, I've realized that you just can't miss school for a two-week stay in the hospital," said Dew. "I went two years without an IV. This just shows that by not revolving your life around the disease, you can overcome obstacles."

CF is most discouraging when you distract others by continuously coughing, said Dew.

"It's embarrassing when I cough in church or class because I feel like I'm inconveniencing people, but I can't help it," said Dew. "In high school I was even asked to go to the office because I didn't stop coughing."

Dew says she doesn't know anyone else who has the disease and goes to college.

"My friends (who have CF) don't think they can make it through college. They say, 'I cough too much,' or 'I have to go to the hospital too often,'"

said Dew. "My friends don't look forward to a future."

Hope for the future comes from support from family and friends, and her faith in God, said Dew.

"Through my disease I've gotten closer to God. I've seen some of His miracles. My friends also really help me cope. They've supported me through everything."

There are even advantages to having a disease.

"I have staff parking and first priority in CAR — that's a real big advantage," said Dew. "At a charity banquet I met the 'General Hospital' staff. I've also met the Raiders and the Dodgers."

As a child, high-energy activities were relatively easy, but since CF is a progressive disease, exercise is becoming more difficult, said Dew.

"I love snow skiing, but it's getting hard for me," said Dew. "I miss hiking and swimming and skiing. I'd like to be cured so I could do those high energy things. But for now, I feel really thankful for each day I make it through feeling good."

Spring practice begins

Head coach preparing for winning season

By Keith Nunes
Staff Writer

It's that time of year again. The Cal Poly football team began its spring practice Monday, in preparation for another winning season.

Head coach Lyle Setencich, in his second year, returns 16 starters from the 1987 team that tied for third place in the Western Football Conference. The Mustangs finished the season with a 3-3 conference

record, and a 7-3 record overall.

The 1987 record was the best for the team since 1980, when Cal Poly captured the Division II Championship.

Also joining the Mustangs for spring practice will be 17 eligible junior college and four-year college transfers.

"The main purpose of spring practice is to give our players, old and new, an idea of what their assignments will be in fall, and to try out some new ideas," said Setencich.

This year approximately 80 players will be working with the team. From those players Setencich and his assistant coaches will try to work specific players into specific positions, with approximately four players per position.

"In the spring we try to do a little bit of everything with the players, from working on individual techniques to having the players work as a team," said Setencich.

"Spring is also a time for us to work out some of the kinks in our system," said the head coach. "We'll try some new offensive and defensive alignments, along with some new plays, and see how well they work. What we're trying to do is refine our system, so when we come back in the fall we (the coaches) know exactly what we want to do."

"As far as players on the team, we will not know what we want to do until we've had an opportunity to evaluate the new incoming freshmen and junior college transfers," said Setencich.

In fall there will be approximately 95 players trying out for the team, the head coach said. "We will evaluate each of them and keep the ones we feel will be ready to play, and have the other players redshirt."

Key returning players include quarterback Tom Sullivan, who moved into the No. 3 position on Cal Poly's all-time season passing list with 1,705 yards, and the total offensive list with 1,706 yards; wide receiver Terry Cole, who finished last season in the No. 10 spot for all-time season catches with 37 for 444 yards; defensive lineman Tom Carey, named to the 1987 second defensive all-western conference team; and defensive back Rene Oliver, named to the 1987 first defensive all-western conference team.

The highlight of spring practice will come on April 23, during Poly Royal, when the football team will hold its annual Green and Gold game in Mustang Stadium at 11:00 a.m.

Fall practice for the Mustangs will begin Aug. 17 and the Mustangs will open their 1988 season at home against Cameron College.

Baseball shut out by San Jose State

Will play 3 home games this weekend in league action

The Cal Poly baseball team couldn't quite get its act together Monday and returned from San Jose shut out 3-0.

The Mustangs were only able to amass five hits against San Jose's Robert Sapp in the non-league game. Sapp pitched the entire game.

The loss drops Cal Poly's overall record to 17-17.

The Mustangs are gearing up for a big three-game weekend against Cal State Los Angeles. Cal Poly and Cal State Los Angeles are tied for third place in league, each with a 6-6 record.

Cal Poly pitcher Lee Hancock said winning these games are crucial for the team. "If we can sweep this weekend, we'll be right in the running (for the league championship)."

To prepare for the weekend games, Hancock said they are trying to work together as a

team and keep up a good attitude.

Friday's game starts at 7 p.m. in Sinsheimer Stadium and Saturday's double-header will begin at noon.

Against San Jose, "Their pitcher threw over 75 m.p.h.," said Hancock. "We popped up a lot,

and never made any real adjustments at the plate."

The Mustangs went through four pitchers. Starting pitcher Keith Chura went four innings and gave up two runs, both off singles.

The loss drops Chura's record to 5-2.

MATERIALS MANAGEMENT

Genentech, Inc., a leader in the field of biotechnology, is now in the process of growing its Materials Department. The group currently has several entry-level opportunities open for which we are interviewing.

Successful candidates will have a general interest in the biotech industry and a specific interest in learning all facets of materials management from the bottom up. Additionally, you should be self-motivated and able to work well in a team environment. Flexibility, ability to learn quickly and a highly developed sense of ownership are also desirable. Biochemistry, chemistry and/or biology exposure helpful, but liberal arts majors are also welcome. Previous work experience not required.

The materials group is responsible for the storage and movement of all manufacturing and non-manufacturing materials within the company, and is a part of the manufacturing organization.

Genentech offers an excellent salary and benefits package and believes strongly in providing opportunities for personal growth and advancement. Please send resume or inquiries to:

CANDIDATES

From page 1
ty will have some jurisdiction over the facility if it is allowed on-shore, Hysen said.

The candidates were divided when asked about the state water project and the importing of water to San Luis Obispo County. Some, such as Beckett,

said the project would be costly and detrimental to county agriculture.

"The project would just act as a Band-Aid and a quick fix," he said. "We need to develop our own local resources now."

Melanie Billig, of the 5th District, said importing water would have tremendous economic costs and secondary impacts on the community. "People will be shocked at the cost of their water

bills," she said. But Jerry Munger, 3rd District candidate, disagreed, saying it is "the most economical choice we have right now."

The candidates did agree that growth is a major concern in the county and most said that if elected they would support a slow-growth ordinance. The majority also said it is important to protect the county's agricultural land and would not approve the

proposed Santa Margarita Ranch development as it now stands. A Texas group has proposed to develop housing in the rural area north of Cuesta Grade.

"A lot of the important issues of environmental concern for the

whole community, which includes students, were addressed here," said Joe Clokey, with Students for Social Responsibility. "The answers given by the candidates had substance and that's what we wanted to draw out."

MEESE

From page 4
McKay was hurting the department's operations and its image.

Shepherd, who was ABA president in 1984-85 and currently is a partner in a St. Louis law firm, "will be a highly distinguished and most welcome addition to the Justice Department family as my second in command," Meese told a news conference.

Keating, 44, currently the assistant treasury secretary for enforcement, will replace Associate Attorney General Stephen Trott and "can hit the ground running" in the Justice Department's work in combating illegal drugs, Meese said. Trott is leaving Washington to become a federal appeals court judge.

Keating is a former U.S. attorney in Oklahoma and an FBI agent. Meese called Keating and Shepherd "two distinguished

men" and said they will serve in an acting capacity until they are confirmed by the Senate.

Asked whether he had had second thoughts about taking the job, Keating said:

"Certainly the events of last week made me as a professional pause, but I have every confidence in the leadership of the department and the attorney general. I think with our new team here the operation of the department will continue."

Meese made the announcements after Philadelphia lawyer Arlin Adams and a Labor Department official declined to be nominated earlier in the day.

Adams said a heavy caseload at his Philadelphia law firm prevented him from taking the job which Shepherd agreed to take.

Meanwhile, Meese was unable to find a replacement for Weld,

department sources said.

Meese said he probably will announce a recommended replacement for Weld after the attorney general returns from a week-long trip to South America to discuss the war on drugs with officials in several countries there.

A Justice Department source said Salvatore R. Martoche, now an assistant secretary in the Labor Department, had rejected a request from Meese to take the job of assistant attorney general in charge of the criminal division.

Martoche decided not to take the job "because of the taint factor" relating to the continuing criminal investigation of Meese, said the source, speaking on condition of anonymity.

Meese declined to say whether he had offered Martoche the job, but said he had spoken to a number of people about it.
