Directed by Professor Stephen Forrest

The publishing business in the Edo period (1603 – 1868) was very unique since it was divided into two genres: *shomotsu mononohon* and *jihon kusazōshi*. Publishers had their specialties and their business strategies varied. In this research paper, I examine the publishing strategies from the view of the network system. First, I state the definition of this network. Next, I study the publishing history of the Edo period to gain a general understanding. Lastly, I examine the network systems of the *shomotsu* publishers and the *jihon kusazōshi* publishers. I use examples from Tsutaya Jūzaburō, Suharaya Mohē, Tsuruya Kiemon, the Torii School and the Utagawa School. In the end, the readers will understand the various networks had the roles to energize the Edo community, and each network was indispensable among the whole big network system.

LIST OF FIGURES

CHAPTER 1

THE NETWORK AND ITS DEFINITION: *REN*

What is a network? This term, "network," has a wide range of applications in Japanese. In order to have a common understanding between Japanese and English, I should clarify what "network" means in both languages before I start examining its definition in this paper. The search for a definition in the *JapanKnowledge* database yielded 357 definitions. In Shūeisha's *Imidas*, I find "network" defined as a reticular organization, IT related structure, business related network, and woven craft products. In these terms, people cannot find human-related terms, so I should move on to find the other definitions in the English dictionary. People will find the follows in the *Cambridge English Dictionary* in *JapanKnowledge*.

> Noun: a large system consisting of many similar parts that are connected together to allow movement or communication between or along the parts or between the parts and a control centre.
> Verb: 1. To connect computers together so that they can share information. 2. To meet people who might be useful to know, especially in your job.[1]

Here, people will find the meaning of "network" in terms of human relations in the second definition of "network" as a verb, along with the physical term (i.e., build a network) in the other definitions. By analyzing these two resources, people will sense that "network" must be derived from a "net" and its "work" to spread and to connect similar or different items. It does not refer only physical networks, such as store branches or the cable networks of computers, but also to non-physical wireless networks and personal or social networks.

---

In this thesis, I explore the structure of the publishing networks in the Edo period and to answer the following questions what type is the strongest network in the publishing business, what type is the long-lasting network, and how networks interacted with each other. In the end, people will see that a variety of networks existed and understand that networks interact to keep the society active.

In the Edo period, the publishing network intertwined with other networks in the Edo society and had an important role in helping the townspeople sustain their businesses and energize their culture. When publishers failed to keep their networks running, the networks lost their appeal to the public, which immediately and adversely caused stagnation or a reduction in business, or, in the worst case, resulted in the closure of the business. However, most significantly, the Edo networks played a vital role in keeping culture and society active. If one small network among the whole broad publishing network declined, then the other small publishing networks filled this gap and re-energized the whole broad publishing network. Also, other networks outside the publishing network, such as the *kabuki* network or *jōruri* network were inspired by their connections with the publishing network, and their activities became livelier, which, in turn, made the Edo culture more dynamic.

When researching the Edo publishing structure, I start with the assumption that the network is based on the social community, the Edo society. My topic, the Edo publishing network, is just one among many networks that existed in the Edo society. In this thesis, I am studying the features of the Edo publishing networks to find how they functioned and how they interacted because I want to show how they affected the community and people's lives. By understanding many varied features, readers will find

significance in the diversity of the networks in this society and how they made people's lives more active and kept them moving forward. In Chapter 3, readers will find that the Edoites sometimes used the publishing networks to protest against their community or that the publishers used the publishing networks within their community for their sales routes. Readers will observe several cases in Chapter 3 and find the reasons why different networks were established in the Edo publishing business and how people in the networks worked and lived.

In classical Japanese, the network was very close term to *ren* 連.[2] This classical Japanese originated from the Chinese 連, and this Chinese word consists of two Chinese characters: 辵 (*chaku*, which means to move on) and 輦/車 (the sound is *ren* and the meaning is to pull). In this context, in current Japanese, *ren* 連 means "*tsugaru, tsureru, tsuranaru, tsuranu, tsuraraku*"[3] which can be translated as "line up, be accompanied by, take along with, tie, bind, connect, and link." In *ren*, people find the meaning from the original term of "pulling to move forward" to the more developed meaning of "line up, connect, and link."

In her book, *Edo no sōzōryoku*, Yūko Tanaka explains *ren* as a network system using an example from Hiraga Gennai. She finds the function of link in *ren*, and she believes Gennai also found the efficiency in *ren* to utilize it in his business. She describes the reasons that Hiraga Gennai (1728 – 1780) in the city of Edo won in terms of numbers against Ōsaka at his herbal exposition 東都薬品会, and his triumph was attributed to the

---

[2] In the present Japanese, there are many examples of using 連. For examples, 連休 (*renkyū*) means consecutive holidays, and 連中(*renchū*) can be translated as a party or a company.

[3] Ogawa Tamaki; Nishida Táchirā; Kiyoshi Takatsuki 小川環樹　西田太一郎　赤塚忠, *Kadokawa shinjigen* 角川新字源 (Tokyo: Kadokawa Shoten, 1976), p.1002.

network system he used to collect herbs. She explains that Gennai had 25 intermediaries in Japan, from Nagasaki to Shinano (present-day Nagano), and he distributed handbills to each intermediary. In these handbills, people found an easy method to provide their herbs to the exposition and then retrieve them. Tanaka thinks Gennai got his idea of a network system to advertise his exposition and collect herbs and return them from the existing *haikai*[4] network system: the intermediary system, *toritsugisho* system 取次所システム.[5] The *haikai* network consisted of poets and intermediaries (*toritsugisho*) 取次所 who created the place and network called *ren* 連 so that the poets could gather and *toritsugisho* trained poets in the presence of the promoters (*kōgyōnushi*) 興行主 who were between the *toritusgisho* and the critics of *haikai* (*tenja*) 点者. In these *haikai* groups, poets created linked poems in a group and paid for evaluations by the *toritsugisho* who collected the final poems and delivered them to the *kōgyōnushi*. The *kōgyōnushi* received them and gave them to the *tenja* with a payment for their evaluation. After the *tenja* evaluated the poems, the drafts were returned to the *kōgyōnushi* who prepared the awards and gave them along with an evaluation to the *toritsugisho*. Finally, the *toritsugisho* returned the drafts to the poets. Gennai used *ren* of *toritsugisho* in this *haikai* network system for his exposition advertisements and delivery service for herbs.

Tanaka relates *ren* with two concepts: place and links. She thinks people form links by sharing a place. She says that "場の共有は、人間の側面のみに注目した場合、「連」とよばれることがある。The sharing of a place sometimes is called "*ren*" when

---

[4] *Haikai* 俳諧 is the term of linked verses (*renku*) by several poets. In the 10th century, it was regarded as the non-traditional poem style. In the Edo period, *haikai* became in the fashion for many people, and the linked verses groups were established in many places.

[5] Tanaka Yūko 田中優子, *Edo no sōzōryoku* 江戸の想像力 (Tokyo: Chikuma Shobō, 1986), p.72.

viewed from a human perspective."[6] This means that *ren* has the flexibility to represent a

place, and by sharing the place, people are linked together but not unified. I believe that

in this context, the individuals are the active particles yet they are not unified. If readers

imagine how molecules act, this idea is easier to visualize. Each molecule is independent,

but each one needs to link or come together with others, otherwise, neither the single

molecule nor the whole bundle of molecules functions well. In her other works, she

defines the " place 場" as the seat for the *kami* in the medieval and pre-modern Japanese

cultural context.[7] The force which humans create with their own wishes, also called the

kami, in which several persons concur in the same purpose and share the same method,

descends there.[8] This force creates a magnetic field, and so people usually do not need to

have a logical reason to come together. They are simply attracted to go there where there

is. Tanaka says that "連の場には、二つの機構がある。一つは、神の座としての連

の場である。人が遊ぶことは、同時に神が遊ぶことであった。There are two

mechanisms in the place of *ren*. The first one is of the place of the *kami*'s seat. This

means humans' play equals the *kami*'s play."[9] It seems the boundary between the *kami*'s

play and the people's play becomes ambiguous gradually. Moreover, people seem have

long forgotten the original meaning of the entertainment for the *kami*. People still gather

for the maximum effect with or without knowing it. Tanaka refers as "連の場のもう一

[7] Ibid., p.10

[8] Ibid., p.10.

[9] Ibid., p.17.

つの機構は「連なり」である。The other mechanism of *ren* is *tsuranari*, a link."[10]

Tanaka describes that the other function of the place of *ren*, as a link by individuals. This is not a dense connection or intense interactions but that of the crowd following links connection of dots to dots. Sometimes, one dot widens the point of another dot and then reaches several dots directly. Sometimes, one dot shrinks and feebly touches the dot nearby. But by touching and reaching, a relationship can last and be extended. Or sometimes, it ends when there are no more dots at the front. This is how the network of *ren*, put an end to this activity. When the place of *ren* vanishes, another new *ren* is born.

Tanaka emphasizes the "place" to play as the seat of the *kami*. This setting was necessary for the people to increase their benefits at the maximum, at the same time, a physical gathering place for individuals. This place had to be well prepared to welcome the *kami* by gathering many members. This process by the group generated a much stronger power than the one generated by the individuals. That was what the *kami* needed. This situation was, indeed, not only for the *kami* but also for humans.

I examine what kind of networks existed in the city of Edo in Chapter 3, after studying the Edo publishing history in Chapter 2. In Chapter 4, I will conclude the types of networks and readers can think how networks worked in the Edo community and how they affected the Edo culture and people's lives in the end.

CHAPTER 2

A BRIEF HISTORY OF PUBLISHING IN THE EDO PERIOD

The history of Edo publishing started with several types of technology, including typographical, woodblock printing, and handwriting. Typographic in Japan began when Toyotomi Hideyoshi 豊臣秀吉 (1537 – 1598) invaded Korea and seized moveable type printing presses and techniques at the end of the 16th century, and the western printing machines was brought by missionaries (1590 – 1611).

There were several versions of many types of printings presses including *Chokuhan* version 勅版 (imperial edition) by Go-Yōzei-tei 後陽成帝 (1571 – 1617), *Suruga* version 駿河版 by Tokugawa Ieyasu 徳川家康 (1543 – 1616) and the *Sagabon* version 嵯峨本 by Hon'ami Kōetsu 本阿弥光 (1558 – 1637) and Suminokura Sōan 角倉素庵 (1571 –1632). In 1593, Go-Yōzei-tei ordered the printing of one of Chinese classics of Confucianism, *Kobun kōkyō* 古文孝経, using wooden movable type. In 1597 and 1599, several books in classical Japanese, classical Chinese, and the *Four Books* 四書 of Confucianism were printed with the same method. Tokugawa Ieyasu appointed Hayashi Razan 林羅山 (1583 – 1657), who was his counselor, to supervise the production of copper-type printing after Ieyasu's retirement to Suruga in 1607, and Chinese textbooks were printed. Hon'ami Kōetsu was one of the prominent artists in Kyoto in that era, and his calligraphy was preserved in books printed with movable wooden type with the financial support of Suminokura. The series of art books were made by using the woodblocks for illustrations and movable wooden type for the text. Papers with

decorative patterns and mica were high quality as was the binding. Kōetsu printed the classical *Ise Story* 伊勢物語, *Hōjōki* 方丈記, and *Tsurezuregusa* 徒然草 and others using *hiragana* (Japanese syllabary characters), and not *kanji* (Chinese characters). This was the first time for *hiragana* to be used for printing, and it marked a memorable turning point in printing history because few people could read *kanji*.

Soon, publishers found this technique inconvenient to print Japanese and *kanji*, and they returned to the original woodblock printing method in the Edo period. The movable type had to be reset after the books were printed, and it took a long time. It also took long to combine the text with the woodblock prints in the illustrated parts. Besides, there were thousands of Chinese character types to set, compared with the limited numbers of Roman alphabet types, so the management and the maintenance costs for the former were considerable. Peter Kornicki describes that inserting reading marks (*kunten*) in Chinese texts was much easier in the woodblocks.[11] Also, Kikuya Nagasawa presumed that because the techniques for printing were not mature, the print runs might have only been up to several dozen copies or 100 at best.[12]

In this shift to woodblock printing, readers must realize that one important fact is the woodblock is a tangible material. It will remain for long time and is an asset with cash value for the copyright by publishers. In the publishing trade, woodblocks were transferred literally from A to B, or the copyright was bought and sold from A to B, or the copyright was shared among several publishers. Or even before it was curved on the woodblock, the copyright was generated, and no one could pirate the original draft. This idea was not possible with the printing using the typographical printing method. The

[12] Nagasawa Kikuya 長澤規矩也, *Kosho no hanashi* 古書の話 (Tokyo: Tozanbō, 1976), p.123.

typographical method consisted of setting rows of movable type, and once they were set and used, they would have to be disassembled. There was no remainder of the tangible material when using movable type. The woodblocks, on the other hand, were valuable products for the book publishers.

There were two big genres of books published in the Edo period. One was the traditional book genre known as *shomotsu* 書物 or *mononohon* 物の本, which included more serious and educational books such as sinological texts, sutras, Japanese classical texts, medical books and so on. *Shomotsu* were necessary for the aristocrats, the monks, the samurai, and the upper level-merchants. It was considered an intellectual genre as well as educational. Before Edo period, the most published books were sutra, and those were published in big temples. The other genre was entertainment oriented books, the so-called *jihon* 地本 or *kusazōshi* 草双紙. *Jihon kusazōshi* were published story books with pictures, song books, lighter and entertainment oriented books, play books, actor critiques, guidebooks, *nishiki-e* 錦絵 which was a colored woodblock print.[13] *Jihon kusazōshi* was mostly printed in *hiragana*, and women and less educated people were able to read them because *hiragana* had limited fonts and easily being mastered to read.

Publishers of both genres formed guilds. The *shomotsu* guild called the *shomotsu toiya* or *shomotsu don'ya,* had a longer history from the Genwa era (1615 – 1624) than *jihon kusazōshi* guild. The *shomotsu* guild was officially recognized by the Edo

---

[13] *Nishiki-e* was invented as a collaborative art work in 1765 by Suzuki Harubobu 鈴木春信 who was a painter. It was a work by a painter, an engraver 彫師 *horishi*, and a print transfer technician 摺師 *surishi*. After a *horishi* engraved a woodblock from the painter's drawing, the *surishi* added pigments on the woodblock and printed copies with a tool called *baren* made by binding papers with lacquer and wrapping them in the bamboo peel. *Nishiki-e* applied various colors, and later in the Edo period this became synonymous with *ukiyo-e*.

government in 1722 and the *jihon kusazōshi* guild gained this distinction much later in 1790. Without participating in these guilds, it was not possible to get permission to publish books legally in the Edo period.

In order to have a better understanding of the readers of *shomotsu* and *jihon kusazōshi*, it is important to know the percentage of the aristocrats, the samurai, and the monks in the Edo period. There is no exact data from a nationwide population survey. I can only take the local data as the examples to estimate the national population. There are results of surveys by the Akita Domain 秋田藩 on Kaei 2/1849 and by the Tsuwano Domain 津和野藩 on Kaei 4/1851. According to these surveys, Akita's population ratio shows the samurai at 9.8%, the merchants at 7.5%, the farmers at 76.4%, and the others at 6.2%.[14] Tsuwano's population ratio includes the samurai at 7.7%, the merchants at 2.96%, the farmers at 86.46%, the craftsmen at 1.56%, and the others at 1.32%.[15] Sekiyama Naotarō estimates the broad population ratio in Japan as the famers at 80% – 85%, samurai 6% – 7%, townspeople 5% – 6 %, and the others 3% at the end of the Edo period.[16] (Note that "others" includes aristocrats, monks, priests, and people considered outcasts.) Sekiyama estimated that the total population in Japan at the end of the Edo period was between 0.3million and 0.32 million in Japan.[17]

Along with the nationwide ratio, I should examine the population in the city of Edo. Sekiyama estimates the population in the city of Edo from the middle to the end of

---

[14] Sekiyama Naotarō 関山直太郎, *Kinsei Nihon no jinkō kōzō* 近世日本の人口構造 (Tokyo: Yoshikawa Kōbunkan, 1969), p.291.

[15] Ibid., p.293.

[16] Ibid., p.312.

[17] Ibid., p.118.

the Edo period as a samurai class including domain lords and the Edo; 520,000 –

530,000, persons without a registered address; 40,000 – 50,000.[18] This adds up to

1,090,000 – 1,110,000. He also estimates the population in Ōsaka from 300,000 to

400,000, based on the survey of *Machibugyōsho* 町奉行 (magistrate's office), which did

not include the samurai class of 418,537 in Hōreki 12/1762, 373,045 in Bunka 13/1816,

and 314,370 in Ansei 5/1858.[19] Sekiyama estimates the population in Kyōto did not

change as much as Ōsaka did, and kept its same range of around 400,000.[20] This

estimation leads to the conclusion that *shomotsu* were sold among what was a relatively

small population in Japan in total, but were widely sold in the city of Edo. *Jihon*

kusazōshi were sold among the wider population both throughout Japan and in the city of

Edo, Ōsaka and Kyōto. *Shomotsu* were a necessity for a certain class such as among

samurai class having their education, and they were sold well for a long time. In contrast,

jihon kusazōshi would have had a chance to be a "best-seller" in a short period, and it

could not possibly be a long term "best seller."

It is also important to consider the price difference between *shomotsu* and *jihon*

kusazōshi. Kōnosuke Hashimoto, who is a bibliographer, took samplings to compare the

price between *shomotsu* and *jihon kusazōshi* to find each profit. He estimated the average

price of *shomotsu* was at ￥5,700 – ￥5,800 yen ($57 – $58). At the same time, readers

must note that one volume of *shomotsu* consisted of several books. Hashimoto estimates

one volume consisted of between 4.3 and 4.8 books. This adds up to between ￥24,000

---

[18] Ibid., p.228.

[19] Ibid., p.231.

[20] Sekiyama, *Kinsei Nihon no jinkō kōzō*, p.232.

and ￥28,000 ($240－$280).[21] This is expensive. In contrast, *jihon kusazōshi* were cheap.

The number of pages was usually 5 *chō* (5 丁=10 pages), whereas *shomotsu* was 50 *chō*

(50 丁＝100 pages), and the paper quality was poor compared to *shomotsu*. As a

conclusion, Hashimoto estimates the average price of *jihon kusazōshi* was ￥300 ($3).[22]

He adds that the print runs for *shomotsu* was usually several hundred copies instead of

the thousand or more for *jihon kusazōshi*. Once a *jihon kusazōshi* became a hit, it was

printed up to 10,000 copies. This is exactly a "small profit and quick return" business.

Which book category was better for publishers is hard to conclude because it is up to how

many books were sold in what category and within what time range.

  In the next chapter, I examine how Tsutajū conducted his publishing business

mainly in the *jihon kusazōshi* genre. I use one example of the *shomotsu* publisher,

Suharaya Mohē 須原屋茂兵衛, and another example of the *shomotsu* and the *jihon*

kusazōshi publisher, Tsuruya Kiemon 鶴屋喜右衛門 to study how their marketing

strategies were different from that of Tsutaya Jūzaburō and how they used their networks

differently for their respective businesses. In the end, I present two more different

networks for publishing, which were related to the *kabuki* world. These examples will

support the recognition of the concept of various network systems.

CHAPTER 3

THE EDO PUBLISHERS AND THEIR NETWORKS

A. Tsutaya Jūzaburō

当時の諸才子に愛顧せられ、その資によりて刊行の冊子みな時好に称(たた)ひしかは、十余年の間に発跡して、一二を争ふ地本問屋になりぬ。世に吉原に遊ひて産を破るものは多けれど、吉原より出て大売りになりたるはいと得かたしとひとみないひけり。（曲亭馬琴。物の本江戸作者部類）

Tsutaya Jūzaburō 蔦屋重三郎 (1750 – 1797) was admired by many talented persons, and his publications were appreciated by the Edoites. Business went well and within 10 years, his publishing house became one of the outstanding *jihon don'ya*. Many men were known to bankrupt themselves through their decadent lifestyles in Yoshiwara and it was rare that someone from Yoshiwara made a fortune. (Kyokutei Bakin. *Kinsei mono no hon Edo sakusha burui*).[23]

Tsutaya Jūzaburō was born, raised, and started his publishing business in Yoshiwara, the pleasure quarter in the city of Edo, the only place where four classes - samurai, farmers, craftsmen, and merchants - were not questioned about their legal status, but were vetted depending how much money they spent. He left there to make a fortune running his publishing business in Tōriabura-machi 通油町, which was known as a competitive publishing environment. Tsutaya Jūzaburō 蔦屋重三郎, known as Tsutajū 蔦重, is considered unique because of his publishing

business in the late Edo period. His publications, including books and *ukiyo-e* prints, were regarded as having high quality content. Under his patronage, many artists and writers developed their talents. Today, their works are still praised for their high quality.[24] These artists and writers, whom Tsutajū supported, included Kitagawa Utamaro 喜多川 歌麿 (1753? – 1806) whose *ukiyo-e* were very popular in the city of Edo, Tōshūsai Sharaku 東洲斎 写楽 (? – ?) who introduced the new style of *ukiyo-e* and vanished after 10 months from his publication, Santō Kyōden 山東京伝 = Kitao Masanobu 北尾政演 (1761 – 1816) who was the one of the best known writers and illustrators in the late Edo period, Jippensha Ikku 十返舎一九 (1765 – 1831) who was also a best seller writer of famous comic traveling story, *Tōkai dōchū hizakurige* (Shanks' Pony along the Tōkaidō), Katsushika Hokusai 葛飾北斎 (1760 – 1849) who left many unique *ukiyo-e*, and Kyokutei Bakin 曲亭馬琴 (1767 – 1848) who wrote the best seller of a reading book of fantastic, *Nansō Satomi hakkenden* (The story of eight dog samurai and a princess of Satomi family in Nansō region). Tsutajū also represented the early Ōta Nanpo 大田 南畝 (1749 – 1823) who was a samurai and a leader of *kyōka* poets, Koikawa Harumachi 恋川 春町 (1744 – 1789) who was a samurai and a fine illustrator and a writer, and Hōseidō Kisanji 朋誠堂 喜三二 (1735 – 1813), who was Harumachi's best friend, a writer, and had the same status as samurai. Tsutajū's relationships with many other writers are also notable, and readers cannot ignore them when one refers to his network.

To this day Tsutaya Jūzaburō is considered one of the most significant entrepreneurs in the publishing history in Japan, as his artists were the bridge to a new

[24] See Fukuda Kazuhiko's comment in *Edo Ukiyoeshitachi* (1979), Ōkubo Jun'ichi's comment in *Ukiyoe* (2008), and the articles in Heibonsha's *Tsutaya Jūzaburō no shigoto* (1995).

generation and widely read by the general audience with favorite themes and subjects in literature and the arts.

How could Tsutaya Jūzaburō promote so many artists without having any personal hereditary advantages such as the social connections and the financial backing enjoyed by the Suharaya 須原屋 or his rival publisher, Izumoji 出雲寺 clans? How could Tsutaya Jūzaburō make his business so successful and competitive against the prestigious *shomotsu don'ya* 書物問屋 and *jihon don'ya* 地本問屋 such as the Suharaya 須原屋 clan, and Tsuruya 鶴屋 clan? Why was his work embraced by so many citizens in the city of Edo? Lastly, why did this business decline so drastically after Tsutaya Jūzaburō the First died? There must be some reasons for this quick popularity and quick decline of the Tsutaya Jūzaburō publishing house.

Tsutajū was born in the Yoshiwara quarter. His parents' occupations are not known exactly, but it is easily assumed that they worked in the Yoshiwara quarter. In 1773, Tsutajū opened a bookstore at the entrance to the quarter to sell Yoshiwara *saiken*

吉原細見, a guidebook that listed the names of courtesans in each pleasure house in Yoshiwara. This *saiken* was published by the publisher Urokogataya 鱗形屋 two times a year. Tsutajū not only sold this book but he also started publishing his first book, *Yūjo hyōbanki* 遊女評判記, which consisted of commentaries on the courtesans in the licensed quarters in 1774. In 1775, he published the Yoshiwara *saiken* when Urokogataya had a problem sending out its publications. Tsutajū took over Urokogataya's place along with taking over the writers and artists who were very popular in the publishing world. Matsumoto Hiroshi presumes that it must have been Tsutajū's character that attracted people to join his circle.[25] Matsumoto's presumption is supported by the words of Ishikawa Masamochi 石川雅望 , whose other name was Yadoya no Meshimori 宿屋飯盛 (1754 –1830) and belonged to Hakuraku *ren* 伯楽連, on Tsutajū's gravestone. "Tsutajū's spirt was high, and that he was generous, magnanimous, and greatly respected by others" can be read there.

Those artists and writers whom Tsutajū took over from Urokogataya were Katsukawa Shunshō 勝川春章 (1726 – 1793), Kitao Shigemasa 北尾重政 (1739 – 1820), Hōseidō Kisanji 朋誠堂喜三二, and Koikawa Harumachi 恋川春町. Shunshō and Shigemasa were leaders among the popular illustrators, and Kisanji and Harumachi were leaders among the writers. Kisanji and Harumachi were from the samurai class and knew each other through their service as Edo *rusui* 江戸留守居, which was an official post as a feudal lord's liaison in the city of Edo.

There were many big publishers such as Tsuruya Kiemon 鶴屋喜右衛門,

---

[25] Matsumoto Hiroshi 松本寛, *Tsutaya Jūzaburō* 蔦屋重三郎 (Tokyo: Nihon Keizai Shinbunsha, 1988), p.52.

Okumura Genroku 奥村源六 and others when Urokogataya ceased publishing. It was very likely and natural for these artists and writers to get commissions from them and not from Tsutajū. At this time, Tsutajū's publications were famous in the Yoshiwara quarter, but not yet in the larger city of Edo.

People, therefore, do not know how the business started, but people know that Tsutajū never lost any chances when the Urokogataya business fortunes declined. Tsutajū seized the chance to take over Urokogataya's business, including his somewhat exclusive writers and artists. By adding them to his *saiken* business, it is easy to presume that Tsutajū's network became broader.

After this transition, Tsutajū's network became bigger as Nanpo's *kyōka ren* expanded. Ōta Nanpo 大田南畝 was the leader of *kyōka* 狂歌 of Yamanote *ren*, 山の手連, which was one of networks located in Yamanote. *Kyōka ren* dealt with *kyōka*, which was a linked comic poetry, and *kyōbun* 狂文, which can be translated as a comic Chinese writing. This linked comic poetry was

very popular in the Tenmei period (1781 – 1788). How this *kyōka* network worked was very similar to the *haikai* network as both were based on a place, *ren* 連, as I examined in Chapter 1.

Nanpo's best friend, Akera Kankō 朱楽菅江 (1740 – 1799), who was the leader of Akera *ren* 朱楽連, was named one of three experts of *kyōka*. Nanpo's rival, Karagoromo Kisshū 唐衣橘洲 (1744 – 1802) who was the leader of Yotsuya *ren* 四谷連, was regarded as the last one of these three. Within their networks, people interacted in the same manner as in the *haikai* network. Many *kyōka* networks had connections with Tsutajū's large network. And present researchers sometimes consider this network to be another form of *ren*.

Kyōka collections were traditionally printed by publishers belonging to the *shomotsu* guild. Initially, Tsutajū belonged to the *jihon kusazōshi* guild. And Tsutajū started publishing *kyōka* collections by developing his network of connections with different *ren*.

Tsutajū's business expanded based on the stable income from publishing and selling the Yoshiwara guidebook (Yoshiwara *saiken*), song books (*shōhon* 正本 and *utaibon* 謡本), and textbooks for common people (*ōraimono* 往来物). And these *kyōka* collections, especially a gorgeous paper and binding collections, were supported by this income and the commission fees from the clients. As can be seen in Appendix A, which is based on *Tsutajū shuppan shomoku,*[26] by 1783 when he moved from Yoshiwara to Tōriabura-machi 通油町 where many prominent publishers were located, he had already published 18 Yoshiwara guidebooks, 26 music score books and 6 textbooks out of 90

---

[26] Suzuki Toshiyuki 鈴木俊幸, *Tsutajū shuppan shomoku* 蔦重出版書目 (Tokyo: Seishōdō Shoten, 1998)

total publications. There was consistent demand for these categories in the same manner as today's readers purchase textbooks and workbooks for their schooling, guidebooks for their sightseeing, and music scores for their piano or violin lessons. But the *kibyōshi* 黄表紙, which literally translates as Yellow Covers, featured short stories of satirical and comical tones with pictures, and was not a reliable publication for a stable income. Sumie Jones referred the life span of *kibyōshi* as short, not only because parody, which by nature has a short literary life span, but also because the Kansei Reforms 寛政の改革 turned a censorious eye to these satirical tendencies.[27] The Kansei Reforms (1787 – 1793) was led by Matsudaira Sadanobu in the effort to turn the Edo government finances around and to control of the morals and people's daily lives. Besides the Kansei Reforms, the prospect of a short life span required publishers to seek good writers and illustrators, which Tsutajū did. To publish *kibyōshi* and *sharebon* 洒落本(books of manners in the Yoshiwara pleasure quarter) was a risky business that could just as easily cost investors or earn large profits. Accordingly publishers needed a stable income to support their business in case their new venture failed. It seems Tsutajū's attempt to get a big hit was successful along with the stable income from the Yoshiwara *saiken* and other music books and textbooks.

Tsutajū was able to bring a number of writers and illustrators into his publishing network through his innovative ideas about publications. In exchange for providing writers and illustrators with opportunities and places to gather for *kyōka* or *kyōbun*, he took advantage of the output from these gatherings. He published the works of many creative people and took advantage of the *kyōka* network to look for more talented writers

[27] Jones Sumie, *An Edo Anthology* (Hawai'i: University of Hawai'i Press, 2013), p.31.

with potential to become popular authors. People can see Ōta Nanpo as a good one example of how Tsutajū promoted a writer, how he used that writer's name value as his publisher's advertising pillar, and how he encouraged other writers to join his network. Nanpo was already well known as the *kyōka* leader in the city of Edo before he joined Tsutajū's network. Nanpo appeared first in Tsutajū's publishing of An'ei 9/1780 when he was 31 years old. However, it was not another *kyōka,* which had made Nanpo famous, but *kibyōshi*. Edoites might have found that Kisanji influenced Nanpo's writing, and Nanpo was in a *kibyōshi* boom. It might have been thrilling for Edoites to read their works in *kibyōshi*, not *kyōka*. It was Tsutajū's task to promote the boom. Kisanji had written one *kibyōshi* and one manner book in 1777 for Tsutajū. He then wrote one preface for *saiken* and one preface for a humorous book (*hanashibon*) 咄本 in 1778, and two prefaces for *saiken* the next year. He had already contributed his name value and works to Tsutajū's publishing network before Nanpo joined. After Nanpo joined Tsutajū's network, Kisanji's workload increased. From 1780 onward, Kisanji started writing many *kibyōshi* for Tsutajū along with prefaces to *saiken*.[28] Kisanji was the regular preface writer of *saiken*. As if Nanpo were trying to compete, he started writing the epilogues of *saiken* from 1783. Interestingly after that point, Nanpo's participation in Tsutajū's publications increased, along with the participation by his peers in the *kyōka* group. I see the synergistic effect in this situation by these two writers, and it was not only these two writers but many writers as will be shown in the next section.

Besides *saiken* epilogues, in 1784, Nanpo wrote two *kibyōshi*, four *kyōka* related publications, one preface for a picture book, one preface for a textbook, and one preface

---

[28] In 1780, Kisanji wrote three *kibyōshi* and two prefaces of *saiken*. In 1781, he wrote four *kibyōshi* and two prefaces of *saiken*.

for a traveler's journal. The most notable fact was that there were three writers, Yadoya no Meshimori 宿屋飯盛, Fushihara no Nakanuki 伏藁仲貫 (? – ?), and Harakara no Akindo 腹唐秋人 (1758 – 1821) belonged to Motomachi *ren* 元町連, who were published by Tsutajū, were within Nanpo's network in 1784. Later, people found more Nanpo-related writers in Tsutajū's publications, such as Shikatsube no Magao 鹿都部真顔 (1753 – 1829) of Sukiya *ren* 数寄屋連 in 1785, Yamamichi Takahiko 山道高彦 (? – 1816) of Sukiya *ren* in 1785, Hezutsu Tōsaku 平秩東作 (1726 – 1789) related in many *ren* in 1785, Tsumuri no Hikari 頭光 (1754 – 1796) of Hakuraku *ren* 伯楽連 in 1786. It should be clear by now that these *ren* were named for their locations, which also meant that the networks were widely spread.

In this case, I find that a wide network was one of the keys to success in the publishing business. According to Tanaka's theory, *ren* is closely related to a "place." She cites that the *kyōka* groups of the Tenmei era as the evidence. Yamanote *ren* by Ōta Nanpo, Akera *ren* by the Akera Kankō, and Yotsuya *ren* by Karagoromo Kisshū were led by the samurai and the main locations were where the leaders and their members lived.

Similarly, eight *ren*, led by the townspeople shared the same common thread as the first three *ren*: a place. Ochiguri *ren* of Kyōbashi, Shiba *ren* of Shiba, Honchō *ren* of Honchō, Hakuraku *ren* of Nihonbashi, Sukiya *ren* of Sukiyabashi, Yoshiwara *ren* of Yoshiwara, Sakai *ren* of Sakai-chō, and Mimasu *ren* of the fan club of Ichikawa Danjūrō. People gathered at these groups mainly because it was a convenient location to visit. Tanaka says the following:

> 連は結社でもなければ、組織でもない。思想や文学的方法において手を結ぶわけでもない。単に近いから便宜的に連になるのであって、後に残る作品の中に、連の影は見えない。前句付の連は、つまりは取次所であった。であるにもかかわらず、連が機能しなければ前句付ネットワークは成り立たな

かった。

> *Ren* is not an association or an organization. Members do not join hands in their thoughts or literatures. They link together because they live nearby or stay close by. The place is just convenient. In their linked verses, we cannot see any influences of their *ren*. *Ren* of the linked verses, in the other words, was mere intermediacy. However without the intermedial function of *ren*, the networks of linked verses would not have existed.[29]

According to Tanaka, *ren* was formed at convenient locations where people gather. And she says that without the function of *ren* to gather people together, the participants' purpose (such as writing linked verse in a group setting) could not be fulfilled. Earlier, as noted, Tanaka referred the *ren/place/salon* as sometimes being combined with a festival.

It does no harm to members if *ren* (the place) stays or disappears. It is not their problem but one for the *kami* to fulfill their wills. People just came and went just like the *kyōka ren* were naturally formed, and naturally disappeared. People simply linked together for their sacred rituals for the *kami*. The *Kyōka* members in Tsutajū's network were very active and mutually affected each other. The more people gathered together, the more active the rituals such as *kyōka* play became. However, Tsutajū's network consisted of many links, and it was easy to stop connecting them when outside factors interfered, as was the case with Tsutajū's incidents. The Kansei Reforms adversely affected Tsutajū's network.

In 1788, Hōseidō Kisanji was pressured to stop writing his satirical books by the Edo government, because of the publication of his *Bunbu nidō mangoku tōshi* 文武二道万石通. In 1789, Koikawa Harumachi was suddenly found dead after he was served a summons from the Edo government for his satirical book, *Ōmugaeshi bunbu no*

---

[29] Tanaka, *Edo no sōzōryoku,* p.78.

futamichi 鸚鵡返文武二道, which was also described the Edo government. The samurai members in Tsutajū's network, including Ōta Nanpo, broke their link to the network. For them, the *kami*'s play in the network ended as it became more dangerous. Ultimately, the members simply left the network. Then, Tsutajū had to explore various genres to fill the holes created after the departure of the samurai members, and joined the *shomotsu* guild for his survival.

After half of his fortune was confiscated as punishment by the censorship of the Kansei Reforms of 1791, Tsutajū had to change his business strategy to move his resources in other directions. I discovered that in Tsutajū's case, after Kansei 1/1789, *aiaihan* 相合板 or as called *aihan* 相板, and the role as *urihirome* 売弘 became more prevalent. *Aihan* was a collaboratively published work with shared publishing cost. For example, if two publishers worked on an *aihan*, then each publisher shared half of the full cost. Accordingly, they also shared the profits. It was a common practice in the Edo publishing business to reduce costs or use this method when one publisher did not have enough capital to publish a work. At this time, *urihirome* emerged as the distributor and sales agent for the other publishers.

Tsutajū tried to sell *shomotsu mononohon* with Eirakuya 永楽屋 and Fūgetsudō 風月堂 which were the most prominent publishers in Nagoya, and to collaborate with other publishers in different locations including Nagoya, Ōsaka, Kyōto, Wakayama, and Ise, by trying to get in between the other long-established publishers in the city of Edo when a conflict between the Nagoya publishers and the Edo publishers arose, after which the Edo publishers started to stop dealing with the Nagoya publishers. This tension started in 1794, when the Nagoya publishers formed a Nagoya publishing guild to publish

in Nagoya. By 1795, the Edo publishing guild started excluding the sales of the potentially pirated books published locally. Tsutajū slipped into this situation, and it seemed he succeeded in connecting with prominent publishers in Nagoya and collaborated with them while signing a contract with Motoori Norinaga of Ise, the most prominent Japanese classical scholar in the *shomotsu* genre. His collaborative works with two big publishers, Eirakuya and Fūgetsudō, totaled 12 publications, along with 7 publications from the supervisor of the Nagoya domain's school for samurai. But he was not completely successful working with publishers and writers in Nagoya and Ise. This collaboration could not reach a final strong stage because the circumstances changed. The tension between the Edo and Nagoya publishers did eventually ease, and the long-established publishers went back their prior business.[30]

When I examined the various genres in which Tsutajū tried to collaborate, I noticed these were not *kibyōshi*, which was his strong repertoire, *jihon kusazōshi,* but *ōraimono*, calligraphy, money issues, Dutch studies, classical poetry, study of Japanese classical literature, essays, and classical Chinese. This genre was *shomotsu mononohon,* which Tsutajū joined later and was not considered to be very expert.

I present Tsutajū's effort in the Appendix B, where the genre and his collaborative publishers are listed.[31] The collaborative works can be counted as 1789: one out of 22 publications, 1790: four out of 24, 1791: one out of 21, 1792: three out of 21, 1793: one out of 30, 1794: five out of 33, 1795: six out of 38, 1796: nine out of 30, 1797: four out of 24. There were not many collaborative works found.

[31] This chart is categorized based on *Tsutajū shuppan shomoku*.

I can conclude from this fact that his network-making ability in other areas with various genres was not successful, blocked by a high wall of strong allegiances between long-established publishers in Edo, Ōsaka, Kyōto and Nagoya. Instead, I see his ability to produce superior work being compromised.

In his later years, Tsutajū tried to strengthen the bond with his remaining artists and writers such as Santō Kyōden, Utamaro, Kitao Shigemasa, Kitao Masayoshi, and Sharaku after all of the samurai writers dropped out of his publishing business. Tsutajū, however, had very tough time recovering financially from the Edo government's punishment imposed on his publishing house that cut it in half with that lost half going to the Edo government. Making matter worse, the commercial failure of Sharaku's *ukiyo-e* publications worsened Tsutajū's financial problem. People know that the promotion of Sharaku ended within 10 months, between May 1794 and January 1795.[32] It is a controversial subject whether Sharaku's work was a failure or a success. Ōta Nanpo described it as a failure in his essay,[33] and present scholars such as Ōkubo Jun'ichi consider the work as a commercial failure compared with Utagawa Toyokuni's work.[34] As an example, Ōkubo presents the comparative techniques of painting in the Utagawa School and by Sharaku, and discusses two portraits of the *kabuki* actor, Segawa Kikunojō the Third 瀬川菊之丞 (1751 – 1810), a man famous for his beauty. Ōkubo concludes that the Utagawa School took the traditional school painting style, which was satisfactory to *kabuki* fans, but Sharaku adopted a realistic style that did not resonate with the *kabuki*

---

[32] The year of 1794 had a leap month, and there were two Novembers in the Japanese calendar.

[33] In *ukiyo-e ruikō*, Nanpo depicted "Sharaku illustrated portraits of *kabuki* actors. However, he tried to make them too real, and it resulted in providing a disappointing impression for *kabuki* fans. Thus his works were not popular, and he and his works were stopped within one year."

[34] Ōkubo Jun'ichi 大久保純一, *Ukiyo-e* 浮世絵 (Tokyo: Iwanami Shoten, 2008), pp. 54-55.

audiences.[35]

Readers must also consider this aspect of the art separately from this commercial point of view. Many scholars, including Fukuda Kazuhiko, praise Sharaku's originality regarding each actor's vivid expression, caricature humor, and dynamic image.[36] The commercial values are based on how well the products are sold, and that means a financial success. From this point on, Tsutajū was not fortunate when he promoted Sharaku. This is not about the network effect, but simply a failure in a business strategy. He did not make a profit in Sharaku's case. Often it happens in a company network system and in many cases other gains in the same network offsets this loss. This applies to the present network system in the organizations, too. Over all, Sharaku's case should have had been fine, if the network system and Tsutajū's finances had been as sound as before to offset the loss. But in reality, it was not a healthy situation.

It seemed Tsutajū planned to make his network stronger by promoting popular writers and artists such as Kyokutei Bakin, Jippensha Ikku and Katsushika Hokusai, but he died before he became successful. These writers and artists were commissioned by many other publishers, and thus Tsutajū the Second (? – 1833) lost his business advantage. He did not replicate the good management skill of Tsutajū the First's network. In the other words, Tsutajū the Second failed to maintain the existing network, because he did not inherit the talent associated with Tsutajū the First to discover and promote the new skillful and talented writers and artists. Readers see that a certain kind of network system based on human relations is not easily passed on to others. To paraphrase this

---

[35] Ōkubo, *Ukiyo-e*, pp. 54-55.

[36] Fukuda Kazuhiko 福田和彦, *Edo ukiyoeshi tachi* 江戸浮世絵師たち (Tokyo: Yomiuri Newspaper, 1976), p.99.

situation, if it is the kind of network where any persons can copy the rules and follow, then it is much easier to manage. People see that on many occasions the companies issue management manuals for the employees to follow, and it works to some extent.

Tsutajū the Second seemed to try and expand his market in other areas and collaborated with other publishers just as Tsutajū the First had done. Readers can see this effort in the Appendix D. However people find the occasion of collaboration was getting more frequent[37] because of the necessity to relieve financial difficulties. He was even having difficulty with the publications within his recognized specialty: the *jihon kusazōshi* field. At last, by the winter of 1837, Tsutajū the Third (? – 1837) collaborated and published the last Yoshiwara *saiken* in the autumn of this year. The last record of this publisher comes from 1852 when Tsutajū the Fourth (? – 1861) sold the *jihon kusazōshi* guild right to Yamada Shōjirō 山田庄次郎.

Besides Tsutajū the First's efforts to make a network, there was an unexpected incident on Kansei 3/1791 caused by the Kansei Reforms. Tsutajū's store was forced to downsize by one-half, and half of his fortune was confiscated due to a breach of the government regulations for publications. These infractions were related to three books in the Yoshiwara and Fukagawa pleasure quarters by Santō Kyōden: *Shikake bunko* 仕懸文庫 , *Shōgi kinu burui* 娼妓絹籭, and *Nishiki no ura* 錦の裏 . On reading these books, I find nothing particularly wrong with them. They were stories about lives in the Yoshiwara pleasure quarter and the unlicensed Fukagawa pleasure quarter. The public might have interpreted this punishment as a warning to the other publishers, to discourage publications about the decadent life found in the pleasure quarters.

---

[37] The ratio of the collaboration was 10.27% in the era of Tsutajū the First. The ratio of the collaboration between Tsutajū the Second and Tsutajū the Fourth was 22.19%.

Readers need to observe more structures in the Edo period in the next examples before I conclude how Tsutajū's publishing strategies were impacted positively or negatively.

B. *Shomotsu* **Publisher: Suharaya Mohē**

I would like next to consider some other publishers to evaluate Tsutajū's performance in making a network. There were both *shomotsu* and *jihon kusazōshi* publishers in the city of Edo. As noted earlier, *shomotsu* were more serious than *jihon kusazōshi.*

Suharaya Mohē 須原屋茂兵衛 was the name adopted by successive heads of the Suharaya publishing business that became one of the prominent *shomotsu* publishers in the city of Edo and originated from Wakayama. Many families including branch stores and the successive main store had a long life from around 1658 to 1904. The Suharaya's publishing business was based on *bukan* 武鑑, a category that included books on heraldry, directories of Edo government officialdom, Edo maps, classical Chinese and Japanese text books, botanical books, geography books, medical books, language textbooks, mathematics textbooks, dictionaries and so on. After fierce competition over *bukan* with the publisher Izumoji Izuminojō 出雲寺和泉掾 for 100 years,[38] the Suharaya publisher won the day by virtue of the strength of his assiduous work and will. Izumoji originated from Kyōto and had a post in the Edo government library through family connections with Hayashi Razan, who was a counselor to the three first Shōguns.

---

[38] The details of this competition are seen in Fujizane's and Yayoshi's works. Fujizane Kumiko 藤實久美子, Edo *no buke meikan* 江戸の武家名鑑 (Tokyo: Yoshikawa Kōbundō, 2008). Yayoshi Mitsunaga 彌吉光長, Edo *jidai no shuppan to hito* 江戸時代の出版と人 (Tokyo: Nichigai Asoshiētsu, 1980).

Although Izumoji was in a politically advantageous position, Suharaya still won.

According to Konta Yōzō, Suharaya's victory came from his strategy of keeping a strong network of sales with many feudal lords' residences, along with smart management of the hard- earned capital that he had acquired over many years.[39] Konta mentions that during the late Edo period the connection with the domains also meant connections with the local publishers, which resulted in more business. Suharaya became the top distributor in the city of Edo for the local publishers because of his strong network connections with them.[40] Konta also points out Suharaya's eventual success in monopolizing the publication of *bukan* and Edo map materials that required the Edo government's permission. These contracts, combined with his additional business as an apothecary remind readers about importance of capital in publishing and the networks for sales routes. It is crucial to note here that Suharaya's network was different from Tsutajū's. Suharaya had a network developed through the authority of the Edo government and the samurai class. His network for his sales route was stable with regular clients. Since the market of *bukan* and other *shomotsu* was dominated by his publishing company and his clan, this publisher was able to earn a steady income.

As I noted in Chapter 2 in the publication industry's history, the print runs of *shomotsu* were smaller than that for *jihon kusazōshi*. But the prices were relatively much higher compared to *jihon kusazōshi,* and the books were sold on a constant and regular basis in the long run. There was no such opportunity for large profits when Ōta Nanpo, Hōseidō Kisanji and Koikawa Harumachi were thrown in the limelight in the *jihon*

---

[39] Konta Yōzō 今田洋三, *Edo no hon'ya san: kinsei bunkashi no sokumen* 江戸の本屋さん: 近世文化史の側面 (Tokyo: Heibonsha, 2009), p.225

[40] Ibid, p.225.

kusazōshi genre: the *shomotsu* books such as Tani Hyakunen's 渓百年 *Keiten Yoshi* 経典余師, which were textbooks in Chinese and annotated in Japanese, offered small profits but were long-term best sellers. Suzuki Toshiyuki explains that books of this kind were a necessary self-study item, especially for the uneducated *gokenin* 御家人 who were the lower-class shogunate retainers during the Kansei Reforms. He mentioned in his work that the lower-class shogunate retainers' education level was relatively low, and then they needed annotations even for easy Chinese.[41]

An investigation of Union Catalogue reveals countless *shomotsu* publishers' publishing and reprinting this series from Kansei 3/1791 to Meiji 17/1884. It is evident that one major difference between *shomotsu* and *jihon kusazōshi* is that sometimes the *shomotsu* copyright and woodblock could last more than 100 years, as readers see in the example above, and the owners of these rights kept this income. But *jihon kusazōshi* was a disposable item and its life was considered short. If there was a hit, it was reprinted several times until the woodblocks were worn out. So if a *jihon kusazōshi* was highly successful, it meant that the publisher could look forward to a big income but only once. In contrast to a network for *jihon kusazōshi* whose publishers, like Tsutajū, thus, the network for the *shomotsu* publishers, such as Suharaya Mohē, tended to focus more on the sales distribution system, was destined to focus on the creation and maintenance of the salon and supplied fresh writers and illustrators to meet the readers' demands.

C. *Jihon Kusazōshi* and *Shomotsu* Publisher: Tsuruya Kiemon

I would like to represent another publisher to make a comparison with Tsutajū and

---

[41] Suzuki Toshiyuki 鈴木俊幸, *Edo no dokushonetsu: jigakusuru dokusha to shoseki ryūtsū* 江戸の読書熱: 自学する読者と書籍流通 (Tokyo: Heibonsha, 2007), p.151.

Suharaya publishers. Tsuruya Kiemon 鶴屋喜右衛門 in the city of Edo was at a branch store from Kyōto during the Manji era (1658 – 1661) and this lasted until the Meiji era (1868 – 1912). The main store in Kyōto was established during the Kan'ei era (1624 – 1644) and continued to the end of the Edo period. Tsuruya in the city of Edo started to sell books for the main store in Kyōto, but later began to publish independently during the Kanbun era (1661 – 1673) as both a *shomotsu* and *jihon kusazōshi* publisher. Tsuruya printed calendars, which required the permission to publish from the government and membership in the calendar guild. He also published textbooks as did Suharaya Mohē in the *shomotsu* genre, and picture books and *nishiki-e* in the *jihon kusazōshi* genre.

It was notable that this publisher had several best-sellers, including Jippensha Ikku's comic travel story, *Tōkai dōchū hizakurige* (Shanks' Pony along the Tōkaidō) at the era of Tsuruya Kiemon the Second and Ryūtei Tanehiko's light fictional story, *Nisemurasaki inaka Genji* (The Tale of Imposter Murasaki and Bumpkin Genji in Muromachi Era) at the era of Tsuruya Kiemon the Third's. Also included among the publisher's titles was Santō Kyōden's *Gozonji no Shōbaimono* (Those Familiar Bestsellers)*,* a story regarding the publishing business conflicts between the city of Edo and Kyōto/Ōsaka, which was highly praised by Ōta Nanpo. In this story, readers see Tsuruya Kiemon the Second's strong determination to survive as a publisher in the city of Edo, by being independent from his connection with the main store in Kyōto. The story comically describes the decline of the popularity of Kyōto and Ōsaka books in the city of Edo. From the opening pages it is strikingly humorous. The family crests that appear in the illustration represent many Edo publishers, including Tsuruya Kiemon, and cover the protagonists' clothing everywhere. Tsuruya was no longer identifying with the Kyōto

side, and had switched allegiance to the city of Edo scene. By the time this book was published in 1782, the number of printings in Kyōto and Ōsaka had dwindled. Konta has shown that the Edo publishing of prints exceeded the prints of the Kyōto and Ōsaka publishers between Kyōhō 17/1727 and Genbun 1/1731. Also between the Meiwa era (1764 – 1771) and the Tenmei era (1781 – 1788), many branches in the city of Edo from Kyōto were closed because of the decline of Kyōto prints.[42]

Soon after the Kansei Reforms and just after Tsutajū acquired the *shomotsu* guild right in 1791, Tsutajū tried to collaborate with publishers in Nagoya, Kyōto, and Ōsaka. Tsutajū attempted to respond to this market shift, but he did not achieve the success he had hoped for. However, Tsuruya Kiemon was successful for the collaborative work with other publishers in another area. Tsuruya's success was due to his strategy and his longer established network compared to Tsutajū's. He set up a collaboration with Murataya 村田屋次郎兵衛 and Nishimuraya 西村源六 of the city of Edo, and Kawachiya 河内屋太助 of Ōsaka, and expanded the sales route in Kyōto and Ōsaka since many *jihon kusazōshi* copies were no longer being printed there. Publishers in the city of Edo were also careful and had the strategy prior to collaborating with publishers in the other area in preventing sales of the pirated copies of products in Kyōto and Ōsaka. Murataya, who collaborated with Tsuruya, requested a certificate of permission for publication in the city of Edo when applying to publish *Tōkai dōchū hizakurige* (Shanks' Pony along the Tōkaidō) on Bunka 4/1807. This control of preventing the pirate publications worked. Konta mentioned that, prior to this collaboration with the city of Edo and Ōsaka publishers, Tsuruya had already collaborated with Ryōundō 凌雲

---

[42] Konta, *Edo no hon'ya san: kinsei bunkashi no sokumen*, pp.117-118.

堂 in Ōsaka to publish *sharebon* in 1801 of *Inakashibai* 田舎芝居 (a country

performance) by Morishima Chūryō 森島中良.[43]

An examination of the differences between Tsutajū the First and Tsuruya

Kiemon, makes it clear that Tsutajū the First collaborated with other publishers in Ōsaka,

Kyōto, and Nagoya, which was in his weaker market in hope of expanding sales. Tsutajū

the First dealt most often with Eirakuya Tōshirō of Nagoya and distributed Nagoya's

books in the city of Edo. It was a clever for Tsutajū the First to partner with Nagoya

publishers because within Nagoya's domain, publication was permitted through the

auspices of the Nagoya guild in Kansei 6$^/$1794 by the Nagoya domain authority. Until

then it was only possible to publish books through the city of Edo publishing guild, the

Kyōto publishing guild, and the Ōsaka publishing guild. And Tsutajū went into

collaboration with the Nagoya publishers when tension between the city of Edo and

Nagoya publishers arose. The long-and well-established publishers in the city of Edo

started excluding the sales of the potentially pirated books published locally as part of

contentious stance against the established publishing guild in Nagoya.The Nagoya and

Edo publishers became mutually antagonistic. However, Tsutajū did not have a long-

established history in his business, nor did he have any hostility towards the Nagoya

publishers. In fact, he did not hesitate to conduct business with them. But the connection

between Tsutajū and Nagoya publishers did not last long since established publishers in

the city of Edo relaxed the exclusion of Nagoya's books from the market.

Many books were brought from Nagoya to the city of Edo for sale. Tsuruya,

unlike Tsutajū, took his copies to other cities, or collaborated with publishers in other

---

[43] Konta, *Edo no hon'ya san: kinsei bunkashi no sokumen*, p.183.

areas in order to publish. This means Tsuruya took a powerful stand, supported by his large capital holdings, which put him in a position to exert some control over other publishers. As Ōwa Hiroyuki shows in his study, besides promoting his own publications, Tsuruya was aggressive in collaborating with the local publishers to expand his business.[44] His strong assets were his keeping his copyrights and shared copyright so that he could sell locally. And according to Ōwa, Tsuruya maintained his sales routes, which was the fundamental survival strategy for all publishers in the late-Edo period.[45]

Eiri yomihon gedai kagami 出像稗史外題鑑 was published by Chōjiya Heibē 丁子屋平兵衛 toward the end of the Bunka era (1804 – 1818). This is a catalogue for the *yomihon,* which was a longer form of fiction. Tsuruya Kiemon collaborated only once with an Ōsaka publisher, working with Kawachiya Tasuke. He collaborated with his branch and with other publishers in the city of Edo, but otherwise, he published *yomihon* using his own capital.[46] Many publishers collaborated with other publishers from other areas and had their own copyrights, and also operated as lending libraries in this genre. Popular items in lending libraries were *yomihon* 読本, *ninjōbon* 人情本 (the genre of romantic fiction), and *shahon* 写本 (a copy of a handwritten book).[47] Chōjiya Heibē was one of these publishers and lending libraries. It made sense for smaller publishers to

---

[44] Ōwa Hiroyuki 大和博幸, "Edo jidai kōiki shuppan ryūtsū no keisei to hatten" 江戸時代広域出版流通の形成と発展, *Kokugakuin zasshi* 國學院雑誌 102:2 (2001), pp.42-44. The beneficial chart is in pp.45-46.

[45] Ibid., p.47.

[46] In this catalogue, 111 *yomihon* books are listed. There are 17 books from Tsuruya or his collaborative books listed in this catalogue. See Appendix E.

[47] *Shahon* included both the simple handwritten copies of printed books and not yet printed books. *Shahon* avoided the Edo government's censorship as these were not printed and the number of handwritten copies was limited. In this case, the Edo government did not consider them worthy of censoring. This did not matter to the Edoites, who had the access to the contents of prohibited books at the lending libraries.

collaborate to sustain their lending library businesses: This required less capital compared to the capital of Tsuruya Kiemon and other big publishers. I noticed this other network type in this narrower field collaborating for their survival in the *yomihon* genre. It is evident that we must pay attention when analyzing the publishing business to the genre and the timing of how these networks were formed.

Despite the success of the Tsuruya publishing business, Tsuruya Kiemon the Fifth suffered a fate very like Tsutajū the First. In Tenpō 13/1842, under the Tenpō Reforms (very similar to the earlier Kansei Reforms), he was punished for his publication of *Nisemurasaki inaka Genji* 偽紫田舎源氏. This was a contemporary version of *Tale of Genji* and was rumored to describe the shogun's harem. The woodblocks were confiscated and destroyed, and he was fined by the government. In the same way that Tsutajū's business declined after his punishment, people can trace the decline in Tsuruya's business after this setback. However, Tsuruya Kiemon the Fifth decided to withdraw from publishing *jihon kusazōshi* and thereby prolonged the life of his business. He sold his rights in the *jihon kusazōshi*'s guild to Tsujioka Bunsuke 辻岡文助 in 1852, and concentrated on the *shomotsu mononohon* field. Clearly his strategy worked. People see that in the Meiji era (1868 – 1912) Tsuruya still survived, and mainly dealt with textbooks and academic guidebooks.

D. Torii art school, Utagawa art school, and the Publishing Business

The Torii School specializes in *kabuki* actors' portraits and billboards. The Utagawa School was the most widely acclaimed art school in the late Edo period. Before I examine the network of these art schools, I should provide a brief history of *kabuki* in

Edo City.

1. *Kabuki* history in Edo City

"*Mattemashita!* (Finally!)"

"*Yo, Naritaya!* (Actor's family stage name)!"

Audience cheers such as these would be echoed by *kabuki* lovers when they viewed actors' portraits, if they were familiar with the *kabuki* performance. They would stare at the actors' portraits and imagine the next movements or dances the actor would perform. They would wonder when they might next visit the *kabuki* theater and young women especially would wonder if they could succeed in cajoling their fathers into letting them attend the *kabuki* theater all day long. It was a hefty expense to attend the *kabuki* theater if someone wanted to go formally. The expenditure was not only for the admission, but also included the cost of a palanquin and *yanebune* (a roofed boat), food and drink from a *shibai jaya* (tea house in a theater), tips and gifts to actors/theater, and the cost of having dinner with the actors.

In the Edo period, one of the most popular entertainments was the *kabuki* performance, and its popularity was promoted by advertisements through book illustrations in *jihon kusazōshi*, pictures for *banzuke* (a list of actors 番付絵), billboards for plays (*kanban-e* 看板絵), actor's portraits (*yakusha-e* 役者姿絵), and so on. *Kabuki* performances expressed people's desires and dreams on the stage. The stories, of course, were not real. Actors were real people, however, and they gave life to the viewers' dreams on stage. This was why people longed to return to view *kabuki* after they had been allured by its enchantment. As noted in Chapter 1, the performance sites of plays and songs are the seats for the *kami*. Accordingly, I would argue that *kabuki* serves as a place for the *kami*. *Kabuki* had dances and songs, but it was discriminated by the Edo government.

36

Perhaps the issue was the performance style and the origin of *kabuki*, which was established by a prostitute, Izumo no Okuni 出雲阿国. The entertainers, including *kabuki* actors, musicians, and dancers in the Edo period were pariahs, and were kept on the outside of the social class system. They were forced to stay in certain districts, such as Sakai-chō 堺町, Fukiya-chō 葺屋町, Kobiki-chō 木挽町 and later in Saruwaka-machi 猿若町. The Tokugawa government disliked *kabuki* because it failed to uphold Confucian values, which the Tokugawa government promoted. Yet commoners and even the samurai class welcomed and applauded *kabuki*.

While *kabuki* was at the core of the entertainment culture in the city of Edo, other entertainment businesses, such as *shibai-jaya* 芝居茶屋 and *ukiyo-e* 浮世絵 publishers proliferated in this district. The network of the *kabuki* world therefore extended to include the *ukiyo-e* publishers and print shops. Without the support of *kabuki*, they could not sustain their business, and the *yakusha-e* painters could not make a living without this synergistic relationship. In the *kabuki* world, then, we can see another network structure different from the three other examples of publishers. The center was the performance place, the seat of the *kami*, and many other commercial businesses surrounded it. Historically, financial crises often occurred in the *kabuki* world and affecting individual groups in the *za* 座, the group. There were originally four *kabuki* groups, and in 1714 one was abolished and then the *za* consisted of three groups. The *kabuki* world had to struggle for survival each time it encountered a crisis. The synergistic business network had to be strengthened for the workers and their survival. In the next section, I examine one of part of the *kabuki* network that involved publishing: the Torii School.

2. __Torii School__

Torii Kiyonobu 鳥居清信 (1664 – 1729) was the founder of the Torii School. His father, Torii Kiyomoto 鳥居清元 (1645 – 1702), was an actor in Ōsaka of a female role, and they came to the city of Edo in 1687. They started to paint pictures for billboards (*kanban-e*) of Ichimura-*za* 市村座 for the announcement of performances, and they gradually acquired a monopoly for billboard pictures. After Kiyonobu died, Kiyomasu 清倍 (?1706 – 1763?) who might be a son-in-law of Kiyonobu, adopted the name of Kiyonobu the Second. The third titular head was Kiyomitsu 清満(1735 – 1785) who was a son of Kiyomasu. The fourth titular head was Kiyonaga 清長 (1752 – 1815) who descended from a book dealer in Edo. Kiyotsune 清経 (? – ?) was from the same

generation as Kiyonaga, and he descended from a *kabuki* specialized publisher, Nakagimaya Izaemon 中島屋伊左衛門. The Torii School now is now headed by Kiyonobu the Ninth, Kiyomitsu 清光(1938 – present).

Figure 4: *Shusse Sumidagawa* Kiyonobu
From Waseda Kotenseki

I find in their circumstances, that there was a certain network for becoming *kabuki* painters. They had the initial skills and conditions to be the Torii School's painters, but not the other schools' painters. Their parents had a certain relationship with the *kabuki* business, and without being aware of it, their children were a part of the network. This network is different from

the one of Tsutajū the First who cultivated and fermented the network by his own efforts and his ideas. But this network I am investigating was a more family-oriented network, and it was very tightly related to the other existing networks and the *kabuki* network.

The Torii School still retains the features of " gourd legs and earthworm outlines (瓢箪足 hyōtan ashi 蚯蚓画 mimizu gaki)" which was established by Kiyonobu the First as we see in *Shussse Sumidagawa* 出世隅田川, written by Ichikawa Danjūrō 市川団十郎 and illustrated by Torii Kiyonobu 鳥居清信 in Figure 4.

There are *yakusha-e* of Ichikawa Danjūrō 市川団十郎 by Kiyomitsu 清満 (Figure 5 and 6) .

The portraits are clearly recognized as Danjūrō by his family crest *Mimasu* 三枡 (three squares), and his specialty of the *aragoto* 荒事 (a style of play featuring exaggerated posture, makeup and costume).

Figure 5: *Ichikawa Danjūrō* (1)
Kiyomitsu
From Waseda Enpaku

Figure 6: *Ichikawa Danjūrō* (2)
Kiyomitsu
From Waseda Enpaku

The Torii School's feature of gourd legs and earthworm outlines helps emphasize this *aragoto* play. His unnatural expression of showing his teeth and ogling his eyes demonstrates this method. This unnaturalness increases the unrealistic but exaggerated story, making his role more interesting and inviting viewers into the drama being depicted.

Torii Kiyomitsu (Kiyonobu the Third) 's works and collaboration are seen in the Waseda Enpaku digital archive collection. His works of actors' portraits total 35. Unknown publishers produced 15, and the remaining 20 were included in Urokogataya 鱗形屋 (3), Enami 江浪 (3), Okumuraya 奥村屋 (3), Matsumuraya Yahē 松村屋弥兵衛 (3), Nishimuraya Yohachi 西村屋与八 (2), Iwatoya Genpachi 岩戸屋源八 (2), Maruya Shōbē 丸屋小兵衛 (2), Iwatoya Wakabayashiya Seibē 岩戸屋若林屋清兵衛 (1), and Emiya Yoshiemon 江見屋吉右衛門 (1). From this data, I can assume Kiyomitsu did not have the predominant publisher for his *nishiki-e.*

However in *kaomise banzuke* 顔見世番付 (a ranking list of actors' status), the situation is quite different from a simple portrait. There were three *za*, and each had different contracts with different publishers with Kiyomitsu the Second who was the same person as Kiyonobu the Fifth (1787 – 1868). In Waseda Enpaku, there were 27 works by Kiyomitsu. Nakamura-*za* 中村座 commissioned Murayama Genbē 村山源兵衛 from 1817 to 1846 as far as I can tell from Waseda's limited record. Murayama outsourced this work to Kiyomitsu. Ichimura-*za* 市村座 commissioned Yamamoto Jūgorō 山本重五郎 from 1826 to 1850. Yamamoto publisher outsourced this task to Yoshimitsu the Second. The third *za*, Kawarazaki/Morita-*za* 河原崎・森田座 was different from the other two *za*. This *za* commissioned several publishers including Ogawa Hansuke 小川半助, Yamazakiya Gonzaburō 山崎屋権三郎, Maruya Jinpachi 丸屋甚八 from 1832 to1851. They outsourced the task to Kiyomitsu the Second.

From this data it seems evident that there existed a stable relationship between the *kabuki* theaters, publishers and artists in two cases. The Kawarazaki/Morita-*za* did not

maintain a relationship with a single publisher but worked with several different publishers over time. Was this due to a financial situation or did the *kabuki* theater owners decide to change publishers or artists? In all cases, more research is required to find out these answers. However, at least I can conclude that two publishers were satisfied with the Torii Kiyomitsu the Third's work, thus two theaters commissioned him through their regular publishers. In other words, the publishers gave the job to Kiyomitsu the Third on a regular basis for years. So the same Torii School style was maintained and the commissions kept coming. Readers see, in this situation, that there was not much change over the years.

If I consider the history of the Torii School, there were periods when it declined and other art schools, such as the Katsukawa School and Utagawa Schools, appeared. The taste of the people shifted towards novelty and they stayed to enjoy the new approaches for a while. However, they eventually came back to the Torii School's traditional style, as we now see in their style in posters and billboards more than 200 years later in Tokyo, Kyōto and Ōsaka. The Torii School is still relevant in the *kabuki* world in the present day. There has been a continuous dynamic movement that keeps the school stable.

3. **Utagawa School**

It was Utagawa Toyoharu 歌川豊春 (1735 – 1814) who founded the Utagawa School. He studied first at the Kanō School 狩野派 in Kyōto, and then he went to the city of Edo and learned his technique under Toriyama Sekien 鳥山石燕 (1713−1788). Thus his technique was diverse, with an especially notable perspective method of painting called *uki-e* 浮絵. His technique was seen in many theatrical posters. His school included disciples such as Toyohiro 豊広 (1773 –

Figure 7: *Shikan* Toyokuni
From ARC

1828), Toyohisa 豊久 (? –?) and Toyokuni the First 初代豊国 (1769 –1825). Under

Figure 8:
Hanshirō
Toyokuni
From ARC

Toyohiro was Hiroshige the First 初代広重 (1797 –1858), who was famous for his landscapes in *ukiyo-e*. Following Toyokuni the First, who developed the Utagawa School's traditional style, were Kuniyasu 国安 (1794 – 1832), Toyokuni the Second 二代豊国 (1777 –1835),

Toyokuni the Third who was also Kunisada the First 三代豊国＝初代国貞 (1786 –

Figure 9: *Kōshirō* Toyokuni
From ARC

1865), Kuniyoshi 国芳 (1798 –1861) and many others.

The Utagawa School retained a strong touch and vivid colors as seen in Figures from 7-9 by Toyokuni the First. The style captures a particular *kabuki* pose to show off the actors to their best advantage.

Figure 7 is of Nakamura Shikan 初代中村芝翫. *Kabuki* lovers can recognize him from

his family crest of *Gionmori* 祇園守 (the amulet of the Gion Shrine).

Figure 8 is of Iwai Hanshirō 岩井半四郎. The last portrait, Figure 9, is

Matsumoto Kōshirō the Fifth 五代松本幸四郎. I should compare his portraits to his

Figure 10: Toyoharu
From Museum of Fine
Arts Boston

master, Toyoharu, to see how Toyokuni the First developed his

technique. The first image by Toyoharu, Figure 10 is not a portrait

of an actor but of a beauty. I see daintiness

similar to Harunobu's style, however, the lines

are much stronger than Harunobu's. The image

of the actor, in Figure 11 is a portrait of a puppet

actor, Yoshida Bungo. He stands upright and his

features are very grand, similar to what I find in the work of his

disciple later.

Figure 11: *Yoshida Bungo*
Toyoharu
From Museum of Fine Arts Boston

Figure 12: *ranking list* Toyoharu
From Museum of Fine Arts Boston

Figure 12 is a ranking list of actors in

the month of November of 1786. It reminds

most people of the Torii School style, and it

confirms the popular notion that Toyoharu

once did this sort of work for a living.

Figure 13 is a perspective view of a

kabuki theater in a style of drawing that was

handed down to many disciples, including Hiroshige.

Now let's go back to Figures 7- 9 of Toyokuni the First. I realize the difference in the use of colors in his images differ from those of his teacher. He uses the colors fearlessly, based on black and brownish red along with purple and green. Patterns of the

Figure 13: *kabuki theater* Toyoharu
From Museum of Fine Arts Boston

garments are very bold and fresh eye opening, in fact. Even the ways women's garments are depicted reflect the Edoite's fondness for vertical stripes. This was the trend in the city of Edo. Most obviously, the actors' facial expressions are tending toward one pattern, one that is a different from the Torii School, as the Utagawa School was rather a comical one. It is as if readers are turning the pages of a comic book

Figure 14: *Utaemon*
Kunisada
From ARC

because the eyes are bigger and the lines

of noses and mouths are sharper. In the present day, people may find

this style too exaggerated. But somehow, it seems that Edoites liked

this over-expression because these prints sold

the most in the city of Edo at that time.

Figure 15: *Danjūrō* (1)
Kunisada
From ARC

Readers will see that this feature is

well developed in Kuniyoshi's and

Kunisada's works. Let's move on to the Figure series by

Kunisada. When readers view the three images, Figure 14-16,

Figure16: *Danjūrō* (2)
Kunisada
From ARC

44

people see that the gestures and expressions are overly exaggerated. The facial

expressions, especially the eyes, are unique. Most eyes are cross-eyed. Their lips are

turned up and their lower jaws protrude. The colors are not brighter than those of

Toyokuni the First as more blue is applied. The lines are much bolder and the gestures are

somewhat unrealistic.

In Kuniyoshi's illustrations, people may find something

different. Figure 17 is not an actor's portrait,

but a picture that depicts military warriors or

battles, called *musha-e* (*ukiyo-e* prints of warriors).

Everything is extremely overly exaggerated

in this first illustration and the lines are

Figure 17: *musha-e*
Kuniyoshi
From ARC

very strong and the whole drawing filled with a lot of lively

movement. This *musha-e* made Kuniyoshi very famous and popular

after a decade of misfortunes. His series of illustrations were for *Suiko-*

den (The Water Margin), which was very popular in the city of Edo

Figure 18: *unknown actor* Kuniyoshi
From ARC

But in Figure 18 to 19, readers find a very different atmosphere.

It is modern, even though the basic touch is the same as Toyokuni.

Kuniyoshi's illustration includes a sophisticated and well-balanced

taste in color and design.

Figure 19: *Sōta*
Kuniyoshi
From ARC

Figure 20 is outstanding in a different manner, as it was an effort to escape from the Edo government's prohibition that was included in the anti-extravagance regulations in the Tenpō Reforms (1841 -1843) to paint actors' portraits. For this drawing, that artist pretended that he had quickly scribbled the work as if it were a child's work. Indeed, the Edo government was never able to arrest him for breaking the law. Instead of breaking the law, Kuniyoshi used his humor to taunt the law. This was typical of Edoite's humor.

Figure 20: *mudagaki* Kuniyoshi
From National Diet Library

Having introduced the school, I would like next to consider the relationship between artists, publishers, and patrons. Andreas Marks says that Toyoharu worked with less than ten different publishers,[48] and we should explore why this was so, and why Toyoharu used a limited publishers and why his disciples used publishers differently. In looking at the Union Catalogue, I find 10 publishers with Toyoharu's work, compared to 406 for Toyokuni the First, 568 for Toyokuni the Third (=Kunisada the First), 269 for Kuniyoshi, and 137 for Hiroshige the First. I must note this is a monographic form list, not for *ukiyo-e*, actor portraits, or theatrical forms. Still the difference between Toyoharu and his students is remarkable. When I used the Ritsumeikan ARC to examine Toyoharu, the number was not big, and I could examine each image on the screen display. There were 11 publishers including Urokogataya, Maekawa, Yamazaki, Okumura, Ōmiya, Nishimuraya, Matsumuraya, Yamaichi, Sasaki, Nishizawa, and Tamagawa and some

---

[48] Andreas Marks, *Japanese woodblock prints* (North Clarendon, VT: Tuttle Publishing, 2010), p.68.

unknown publishers. I also checked the Boston Museum of Fine Art's Bigelow Collection that Bigelow collected mostly during his stay in Japan between 1882 and 1889. There were 122 pieces by Toyoharu. Even though this collection was dependent on Bigelow's taste and most of them were landscapes, the collection was helpful in finding publishers. There were 49 by Nishimura, 5 from Urokogataya, 3 from Matsumotoya, 2 from Matsumuraya, 2 from Iwatoya, 1 from Ōmiya, and 9 were original drawings. The rest were by unknown publishers. So I could add two more publishers to the ARC, which adds up to 13 publishers. This was still a very small number. Why did this happen?

When I did my research in the ARC, I found quite a few original drawings in the collection. I then realized that there were several factors for why Toyoharu did not connect with many publishers. First, there was the possibility he had many commissions from individuals instead of from publishers. As I saw in the ARC or MFA in Boston, there must have been enough demand from individuals. There was the *egoyomi* 絵暦 (picture calendars) fashion in the Meiwa era (1764 – 1771) among poets groups, when rich individuals commissioned artists to work for them. The network of Toyoharu was one without many publishers. Instead, it involved individual's related network and this circle was small. Second, even with only a small number of publishers being involved, as I saw in Bigelow's collection, Nishimuraya commissioned Toyoharu to produce quite a few prints. This can explain why Nishimuraya or a few publishers were predominant in ordering his works. The network that involved Toyoharu had a very small range, but it was also very tightly knit.

When I look at his students, I also realize that they had to have their own workshops because of the high volume of demand. As readers have already seen in the

data in the Union Catalogue, it was beyond an individual's capacity to deal with this volume of demand. Beside books, there was demand for *ukiyo-e*. Regarding books, I could use the Waseda Kotenseki database to compile statistics.[49] Toyokuni the First had 133 books from 23 publishers, and his student Kunisada published 431 books from 69 publishers. It might have been possible for Toyokuni the First and his students to deal with this demand within its small circle. But in Kunisada's case, it is obvious the work had to be done within a larger workshop. Besides, there were more volumes for *ukiyo-e.* When I used the ARC database, I entered the publishers' names in the search engine. Next, I retrieved the artists' commissioned works on the screen. Then I narrowed the results by entering the artists' names and found interesting results. When readers check Appendix H, it is predictable that Kunisada would get more commissions than Kuniyoshi, as was typically the case. However, several publishers commissioned Kuniyoshi more often than Kunisada. When I examined those publishers' features, I found they had a side business printing fans. When readers see the designs he created, everyone has to admit these were to the taste of Edoites: full of wit and with an eye for fashion. It may be possible that Kuniyoshi led the Edoites or maybe the Edoites had the tastes followed by Kuniyoshi. It is difficult to explain how they were connected, but at least I can tell that the publishing business in the city of Edo was involved in many factors having to do with the proliferation of the artists' works. Each individual's taste is ambiguous and changeable. However, once the publishers sensed the Edoites' taste, they ordered Kunisada to create products the way the locals wanted them. As the publishers planned to produce fan products from the view point of the Edoites' taste, this should have been a suitable product to sell. In his work, Mitsunaga Yayoshi described how the publishers had

---

[49] See Appendix F of Toyokuni the First and Appendix G of Kunisada.

fulfilled an important role in channeling cultural communication. This was done by publishers providing the products to the public through not only planning and editing the work of artists and writers, but also providing additional value.[50] There is demand and supply and vice versa. I can tell that actors' portraits and actors' fans by the Utagawa School are very much the products of a commercialized network structure.

However, when readers see Figure 20, people find it to be more than the product of the commercial network. It is the expression of repulsion among townspeople towards the Edo government to censor people, and this drawing helped spread the townspeople's grudge in a subtle manner. Kuniyoshi represented the Edoites' stress openly by using his means of media. He was in a different network among the townspeople and helped to represent their frustration bravely. This is one of the other different types of networks in the publishing network.

CHAPTER 4

CONCLUSION

My intention in undertaking this thesis was to examine the role of networks supporting the Edo publishing businesses in order to get a better understanding of the larger framework of networks functioning in the Edo community. The Edo community has countless networks, and they seemed chaotic, unless one stops to look closely at how a particular network functions and links to others within whole community. I believed that the Edo publishing industry would be a fairly simple network to analyze because it contained only two categories: the *shomotsu mononohon* field and the *jihon kusazōshi* field. It was apparent that funding, finding good writers and artists, catering to popular taste or to a particular taste, promoting products, and maintaining a strong sales network were indispensable for their success. However, the more I explored these different networks, the more I found many unique features of the networks that made me realize I should view the community as a whole and not as individuals.

One might still ponder which network had a stronger and longer life in the world. As I have seen the example in Tsutajū the First's case, his network was more salon-oriented for the writers and artists, and it was the place for anyone to come and go with the purpose of serving *kami*, and eventually themselves. This place had a very positive effect that created a flourishing business from the start. Anyone who came to this place was linked with other persons. The links were more important than the individuals themselves, because this linking created more energy and creativity than any one link by an individual.

At the same time, I have realized that this kind of salon-oriented network, because it depends on an individual's magnetism, runs a risk of failing if the successor does not have similar managerial skills or charisma. This personalized network-making often contains a unique character for a short period and with traits that are hard to transfer. The network tends to be fragile when it confronts the strong and unbendable presence of a power such as the rule of the Edo government. I have seen that the network characteristics were easily dispersed in the case of Tsutajū. In contrast, in Suharaya Mohē's case, I have seen a quite opposite situation. Suharaya did not depend on a personalized network, but relied on a publisher's routine and steady sales network. His network was not composed mostly of the artists or writers, rather, it was based on a sales route system that supported his publisher industry. It has become obvious that in the publicating world, that the publishers who maintained relations with the less changeable purchasers were the better survivors in the long run than the ones who depended on the general public market.

In this paper, I learned that *jihon kusazōshi* publishers such as Tsutajū the First turned a big profit within a short period by utilizing his personalized network. At the same time I learned his decline was prompt when he had difficulty in reconstructing his network in Kansei 3/1891 and after being punished by the government, a punishment that forced the samurai class to leave his network and caused financial damage. Tsutajū the First was on a mission to replace his network members with others. Tsutajū tried to maintain his network along with his effort to expand his business in the field of *shomotsu mononohon*. He was successful, to some degree, for a while.

But the basic concept in the case of Tsuruya Kiemon was quite different. Tsuruya

Kiemon, who was also a prominent publisher in the Edo era, encountered a very similar punishment at Tenpō 13/1842. He changed his business strategy very quickly. He sold his *jihon kusazōshi* guild right to the other publisher, and concentrated on his *shomotsu mononohon* business. He focused on the similar network strategy as Suharaya Mohē did. His business became smaller, but it lasted to the Meiji era (1868 – 1912) by staying within the academic field.

In the end, I saw different networks related to the *kabuki* world. As the *kabuki* world was (is) succeeded completely according to a hereditary system, I saw a similar system for the illustrators and publishers related to the *kabuki* world. The Torii School still exists after about 200 years. The techniques were passed down from teachers, and the school's output still includes a similar pattern in the present actors' portraits. The network is related to the other networks of the *kabuk*i world: the network of the publishers, and the other network of the middle persons. I cannot find the same publishers now that the Torii School used to be related to nor the middle persons in the present time. But I still see the billboards or the actors' portraits of *kabuki* around towns that were produced by the Torii School. Its network has survived because of keeping its work unique, and maintaining a consistent pattern in its own traditional small network. This is one of the networks I can consider. At the same time, I saw the different *kabuki* portraits style of the Utagawa School. Even though it does not remain so now, I learned that at the end of Edo period, it was the most popular style because it expressed what the Edoites needed, and the network was based on commercialization and was run very well by the publishers and painters. Sometimes, I see the other networks in this commercialization: the strong resilience network under repressed circumstances that represented the Edoites.

Life in the Edo period, at any moment, may have looked chaotic and devoid of the concepts of networks. However, the Edo society consisted of many factors, and each factor had a unique character. Readers may view this as if the Edo community floated along on chaotic and inexplicable phenomena. However, after the concept of networks is applied, readers can begin to see organization in the Edo community through the lens of network interactions and the state of the culture continues to be vibrant state because of the linkages between networks at any given time. Furthermore, researchers can take any one of the many networks and examine to connect it with the other networks.

For example, in this paper, I looked at the Edo publishing network. In this network, many different other networks were included, such as Tsutajū's network, Suharaya's network, Tsuruya's network, and the *kabuki* network. Tsutajū's network included the *kyōka ren* network, Yoshiwara network, *jihon kusazōshi* guild network, *shomotsu* guild network, and artists' network. In Tsutajū's overall network, each smaller network was indispensable because it affected the others and supported these activities of the broader network. As I showed, when the *kyōka ren* network declined, the other networks, such as *shomotsu* network and artists' networks, were reinforced to support Tsutajū's network. When the Tsutajū's network started declining, the other networks among the publishing networks, such as that of Tsuruya, filled this gap. So the Edo publishing world remained active as a whole and contributed to the other networks in other fields and kept the Edo culture vibrant.

The researcher may take smaller networks as the topic: Yoshiwara *saiken* and *yūjo hyōbanki,* both among the Yoshiwara network, in which the publishers were commissioned to promote courtesans with maps, stories, and illustrations. These are

subjects for research not only for the study of this art or its history but also for the publishing networks and how they received their commissions from the brothels. *Saitan-shū* 歳旦集 (a collection of Japanese New Year's poems) can be researched from both the point of art and literature and the view of the publishing as a part of a *kyōka* network because the work was commissioned to publishers as a New Year's publication for a *kyōka* group. The bibliographers can research the colophon for the bibliographic record of the study and from the point of view of the publishing network as collaborative publishing. *Kabuki* researchers can examine how several networks, such as the fan-making network, artists' network, the fan club network, the clothing store network, and other networks related to the publishing network in order to see how the *kabuki* network energized Edo fashions. A sociologist may find a key concept that lets them rediscover the social structure in the two guilds networks, the *shomotsu toiya/don'ya* network and the *jihon kusazōshi toiya/don'ya* network by examining the difference between the two guilds for publishers. The researcher studying the Edo period might find that the publishing networks had an important role as a cultural creator among the many networks in the Edo community.

These are just a few examples for future research, but it is evident that each network in the publishing industry existed to activate Edo's publishing community and culture, resulting in the flourishing that community by interacting with the other networks. The networks in the Edo publishing were aligned with the other network, and all of them interacted dynamically to keep the community active. Other researches in the networks in the Edo period could lead the other beneficial conclusions.

APPENDICES
