Foreword

The Central Marine Fisheries Research Institute established at Mandapam, Tamil Nadu in 1947 set up its first Marine Museum with reference collections at Mandapam. This served as an important source of study material for researchers from all over the country. Four catalogues were brought out on the specimens in the reference collections of the Museum in late 1960s, in the form of bulletins. They were, 'Catalogue of sponges, corals, polychaetes, crabs and echinoderms' (Bull.No.7), 'Catalogue of fishes from the Laccadive Archipelago' (Bull.No. 8), 'Catalogue of molluscs, prawns, stomatopods and marine algae' (Bull.No. 9) and 'Catalogue of fishes (excluding those from Laccadives)' (Bull. No. 10).

Consequent upon the shifting of the headquarters of the Institute from Mandapam to Cochin, a Marine Biodiversity Museum was established at Cochin also. The Museum was inaugurated by Padma Vibhushan Prof. M.S. Swaminathan, on 4th February 2006. The Museum now houses around 1600 specimens including fishes, crustaceans, molluscs, echinoderms, corals, ascidians, seaweeds etc. The specimens are of fundamental importance to taxonomic, systematic and biodiversity studies. The present catalogue prepared by the Marine Biodiversity Division of the Institute is expected to encourage researchers to make use of the important collections of the Museum.

The major portion of the specimens in the Museum represents the collections made by scientists of CMFRI as part of their research activities. The keen interest shown and sincere effort put in by the scientists of the Institute in building up this Museum as a priceless gift to those who pursue science, need special mention. They have deposited their valuable specimens in the Museum and contributed in one way or the other to bring it to the present status. I congratulate all those who have been involved in the collection, preservation, identification and cataloguing of the specimens in the Marine Biodiversity Museum.

Preface

The Central Marine Fisheries Research Institute, Cochin was recognized as a 'Designated National Repository' by the Government of India, in December 2007 in consultation with the National Biodiversity Authority under the Biological Diversity Act, 2002. A Designated National Repository (DNR) is an Institution authorised to keep in safe custody specimens of different categories of biological material.

The Museum offers a glimpse of the bioresources of the Indian seas. Currently the museum houses six holotype specimens, 878 finfish species, 136 crustaceans, 217 molluscs, 44 echinoderms, 162 corals, 12 sponges, 20 ascidians, 82 seaweeds and 8 seagrasses besides a dolphin and three Antarctic birds. The Museum is open to scientists, teachers, students and the general public. The fact that students form more than 85% of the visitors highlights the role played by the Museum in education.

A catalogue of the specimens available in the Museum has been prepared as it is expected to be of immense use to those engaged in marine biodiversity studies. I sincerely thank Dr. G. Syda Rao, Director, CMFRI whose guidance and encouragement made this a reality.

It is gratefully acknowledged that the Museum acquired its present status as a result of the vision, effort and devotion shown by our former Directors, Dr. E.G. Silas, Dr. P.S.B.R. James, Dr. M. Devaraj, Dr. V.N. Pillai and Dr. Mohan Joseph Modayil. The efforts taken by Dr. N.G.K. Pillai, Dr. K.J. Mathew and Dr. A.A. Jayaprakash in building up the Museum need special mention.

I sincerely thank the Heads of different Divisions and scientists and technical staff of both the Headquarters and Regional and Research Centres of CMFRI for depositing valuable specimens in the Museum and helping in the identification of the same. The service rendered by the scientists and technical staff of the Marine Biodiversity Division is also gratefully acknowledged.

Dr. Mary K. Manisseri
