Eur J Pediatr (2005) 164:577–582

In the article about risk factors for allergic bronchopulmonary aspergillosis and sensitisation to *Aspergillus fumigatus* in patients with cystic fibrosis several mistakes in Table 2 were detected.

Table 2 should read as follows.

The basic content of the paper is not affected by this correction.

The authors apologize for this inconvenience and acknowledge the help and critics by Prof. Dr. Sabina Gallati, who determined the genotypes in her laboratory in the Department of Pediatrics, University of Berne, Switzerland, according to the method described in: Liechti-Gallati S, Schneider V, Neeser D, Kraemer R, *Two buffer PAGE system-based SSCP/HD analysis: a general protocol for rapid and sensitive mutation screening in cystic fibrosis and any other human genetic disease. Eur. J. Hum. Genet. 1999;7:590–8*, and who informed us about the inconsistent listing of the genotypes.

Table 2 Distribution of *CFTR* alleles in cases with ABPA, AFS and their control groups (Pearsons $\chi^2 = 10.6$, exact $p = 0.30$)

<i>CFTR</i> alleles	ABPA Patients (n) (n = 11)	ABPA control (n = 25)	AFS (n = 20)	AFS control (n = 37)
$\Delta F508$	18 (82%)	43 (86%)	31 (78%)	49 (66%)
3905insT	0 (0%)	1 (2%)	4 (10%)	7 (9%)
R553X	1 (5%)	2 (4%)	1 (3%)	7 (9%)
others	3 (14%)	4 (8%)	4 (10%)	11 (15%)
