Insecta Mundi is a journal primarily devoted to insect systematics, but articles can be published on any non-marine arthropod. Topics considered for publication include systematics, taxonomy, nomenclature, checklists, faunal works, and natural history. **Insecta Mundi** will not consider works in the applied sciences (i.e. medical entomology, pest control research, etc.), and no longer publishes book reviews or editorials. **Insecta Mundi** publishes original research or discoveries in an inexpensive and timely manner, distributing them free via open access on the internet on the date of publication.

Insecta Mundi is referenced or abstracted by several sources including the Zoological Record, CAB Abstracts, etc. **Insecta Mundi** is published irregularly throughout the year, with completed manuscripts assigned an individual number. Manuscripts must be peer reviewed prior to submission, after which they are reviewed by the editorial board to ensure quality. One author of each submitted manuscript must be a current member of the Center for Systematic Entomology. Manuscript preparation guidelines are available at the CSE website.

Chief Editor: Paul E. Skelley, e-mail: insectamundi@gmail.com

Head Layout Editor: Eugenio H. Nearn

Editorial Board: J. H. Frank, M. J. Paulsen, Michael C. Thomas

Review Editors: Listed on the **Insecta Mundi** webpage

Manuscript Preparation Guidelines and Submission Requirements available on the **Insecta Mundi** web-page at: <http://centerforsystematicentomology.org/insectamundi/>

Abstract. Distributional records of the 71 tiger beetle species and subspecies known for Argentina are given together with a key and habitus photos (Coleoptera: Cicindelidae). *Brasiella* (*Brasiella*) *cuyabaensis* Mandl, 1970 and *Brasiella* (*Gaymara*) *rotundatodilatata* (Horn, 1925) are reported as new for the fauna of Argentina. *Brasiella* (*Brasiella*) *stamatovi* (Sumlin, 1979) is transferred to *Cylindera* (*Plectographa*), becoming *C. (P.) stamatovi* (Sumlin), **new combination**. *Cylindera* (*Plectographa*) *siccacalacicola* (Sumlin, 1979) is placed into synonymy under *Cylindera* (*Plectographa*) *hassenteufeli* (Mandl, 1960), **new synonymy**. A **lectotype** is designated for *Cylindera* (*Plectographa*) *patagonica bergiana* (Horn, 1895).

Key words. Coleoptera, Cicindelidae, Argentina, faunistic data, systematics

Introduction

Early in the 20th Century 52 taxa of tiger beetles were recorded from Argentina (Bruch 1911). Eighty one years later, the number increased by only five to 57 (Wiesner 1992). Currently, 71 taxa representing 65 species are now recorded as occurring in Argentina.

With the support of Sebastian Bolle, Munro, Buenos Aires, in the late 1990s the first author received several tiger beetles from Argentina. The second author made several collecting trips in the last nine years (2004 – 2013) with the aim of increasing the knowledge of the tiger beetle fauna of the northern regions of the country (La Rioja, Santiago del Estero, Córdoba, Corrientes, San Juan, Catamarca, Santiago del Estero, Tucumán, Salta, Jujuy, Buenos Aires, Santa Fé, and San Luis).

The northern provinces of Argentina are characterized by a wide variety of habitats: mountains streams; semi-desert highlands with many salt flats; remnants of old salted lagoons in the Andean area; temperate and subtropical forests (Yungas) in the hills and low mountains of the pre-cordillera; pastures and cultivated fields on the east plains, with vast salt flats (like Salinas de Mascasin, Salinas Grandes y Salinas de Ambargasta) with temporary water pools, generally dry in summer; rivers which dry up during summer and large rivers (Paraná and Uruguay rivers) flowing toward the Atlantic Ocean; and lakes whose dimensions differ from small to large depending on season of the year, such as Laguna Mar Chiquita, a salt water lake with a surface area that ranges from 2,000 to 4,500 sq.km. The wide variety of habitats supports a high diversity of arthropod species, including tiger beetles.

Methods and Materials

Collecting methods used by the second author included direct netting during the day and light trapping and direct searching on ground with a flashlight at night. Light trapping was performed using a simple yet effective lighting system consisting of a plain white cloth approximately 1.5 meters wide by 1.8 meters high, kept in position by two vertical poles and four tie rods. The lights themselves consisted of two extra-white color (6,500 °K) 35 W fluorescent compact lamps, fed by an inverter connected to a car battery. The intensity and color of the light are similar to that provided by a portable generator feeding

a 250 W mixed-light lamp. A normal car battery in good condition can provide enough power to run the system for 5 hours. A total of 400 hours of light trapping was conducted.

The light trap proved to be effective especially for individuals of the genera *Odontocheila* Laporte de Castelnau, *Pentacomia* (s. l.) Bates and *Brasiella* (s. l.) Rivalier. Other genera with nocturnal habits, such as *Phaeoxantha* Chaudoir and *Tetracha* (s. l.) Hope were not directly attracted by lights, even though they were regularly found in close proximity of the light. The typical collecting method for these beetles was to walk around illuminating the soil with a flashlight.

Generally, nocturnal tiger beetles are most active during the first hours after sunset, with decreased activity throughout the rest of the night. This behaviour is especially apparent with all species of *Tetracha* (s. l.). At every site where the genus was observed, individuals come out in big number as the sun began to set, and were fully active for approximately the next half hour. As the evening progressed their number decreased with only a few individuals being active throughout the night.

Specimens are deposited in: **ABIC** = collection of the second author; **AKCC** = collection of Arnošt Kudrna, Czech Republic; **JWGC** = collection of the first author; and **MZUF** = collection of the Zoological Museum of the University of Florence, Italy.

Key to the Tiger Beetles of Argentina

Portions of keys by Freitag and Barnes 1989, Sumlin 1993, Wiesner 1999 and Naviaux 2007 are combined and modified herein.

1. Metepisternum narrow, with grooves anteriorly **1. *Ctenostoma ichneumoneum ellipticum* Naviaux**
- Metepisternum relatively broad, without anterior grooves **2**
- 2 (1). Anterior corners of pronotum more advanced than anterior margin of prosternum **3**
- Anterior corners of pronotum not more advanced than anterior margin of prosternum **25**
- 3 (2). Elytra without humeral angles **2. *Picnochile fallaciosa* (Chevrolat)**
- Elytra with developed humeri **4**
- 4 (3). Labrum short and transverse, with submarginal setae **5**
- Labrum long and narrow, with marginal setae **21**
- 5 (4). Head partly or completely brownish or yellowish **6**
- Head never brownish or yellowish **11**
- 6 (5). Head bicolored, yellow at the front and black at the back **8. *Metriocheila nigricollis* (Reiche)**
- Head never bicolored **7**
- 7 (6). Apex of elytra rounded and retracted at suture; medium-sized species (about 15 mm) **4. *Phaeoxantha cruciata* (Brullé)**
- Apex of elytra not rounded and not retracted at suture **8**
- 8 (7). Basal part of pronotum black **3. *Phaeoxantha bucephala* (Horn)**
- Basal part of pronotum testaceous **9**
- 9 (8). Size large (about 20 mm); elytra entirely covered with short tiny hairs **6. *Phaeoxantha aequinoctialis aequinoctialis* (Dejean)**
- Size small (about 10 mm); elytra glabrous **10**
- 10 (9). Pronotum smaller than head **7. *Phaeoxantha laminata* (Perty)**

—	Pronotum broader than head	5. <i>Phaeoxantha tremolerasi</i> (Horn)	
11 (5).	Elytra short (55 % of total length)	9. <i>Tetracha (Microtetracha) germaini</i> Chaudoir	
—	Elytra longer (60 to 65 % of total length)		12
12 (11).	Labrum black	19. <i>Tetracha (Paratetracha) femoralis rivalieri</i> Naviaux	
—	Labrum yellow or brownish		13
13 (12).	Right mandible with four teeth		
— 10. <i>Tetracha (Tetracha) brasiliensis brasiliensis</i> (Kirby)		
—	Right mandible with three teeth		14
14 (13).	First inner tooth of the male's left mandible longer than second one		17
—	Second inner tooth of the male's left mandible longer than first one		15
15 (14).	Mandibles of male not or moderately furcated; elytral apex rounded with obtuse angle at the suture		16
—	Mandibles of male obviously furcated, the first tooth approximately as long as the apical one; elytral apex ending in a sharp angle	16. <i>Tetracha (Neotetracha) quadrata</i> Naviaux	
16 (15).	Size < 15 mm; elytra oval-shaped	17. <i>Tetracha (Neotetracha) prolongata</i> (Horn)	
—	Size > 15 mm; elytra more parallel-sided ..	18. <i>Tetracha (Neotetracha) brevisulcata</i> Horn	
17 (14).	Size < 12 mm; elytra oval-shaped, color dark green, mat appearance		
— 11. <i>Tetracha (Neotetracha) annuligera</i> Lucas		
—	Sizes diverse; elytra more rounded, brighter appearance		18
18 (17).	Color coppery, varying with angle of view		20
—	Color not coppery, not depending on the angle of view or only slightly		19
19 (18).	Antennae long and thin; pronotum small but elytra ample		
— 15. <i>Tetracha (Neotetracha) cyanea</i> (Horn)		
—	Antennae short and thick	14. <i>Tetracha (Neotetracha) distinguenda</i> (Dejean)	
20 (18).	Shape longer; color bright	12. <i>Tetracha (Neotetracha) fulgida</i> (Klug)	
—	Shape shorter; color less bright, light bronze		
— 13. <i>Tetracha (Neotetracha) pseudodistinguenda</i> (Horn)		
21 (4).	Elytra with bright maculation in the middle		22
—	Elytra lacking maculation		24
22 (21).	Elytral maculation forming a small dot	20. <i>Oxycheila pinelii</i> Guérin-Méneville	
—	Elytral maculation larger		23
23 (22).	Elytral maculation wavy	23. <i>Oxycheila labiata</i> Brullé	
—	Elytral maculation bilobed	21. <i>Oxycheila femoralis</i> Laporte de Castelnau	
24 (21).	Legs entirely black	24. <i>Oxycheila opacipennis</i> Waterhouse	
—	Legs not entirely black	22. <i>Oxycheila germaini</i> Fleutiaux	
25 (2).	Sternites of pronotum abdomen shiny and nearly glabrous		26
—	Sternites of pronotum and abdomen more or less setose		35
26 (25).	Labrum with four setae		27

—	Labrum with more setae	34. <i>Iresia (Iresia) lacordairei</i> Dejean
27 (26).	Apical half of elytra without reticular structures	33. <i>Cheilonycha auripennis angustedilatata</i> Horn
—	Elytra with densely reticular structures	28
28 (27).	Inner sac of aedeagus with flagellum	29
—	Inner sac of aedeagus without flagellum	32
29 (28).	Elytra without yellow spots; labrum black in both sexes	26. <i>Odontocheila nitidicollis</i> (Dejean)
—	Elytra with four yellow spots; labrum of male bi-colored	30
30 (29).	Labrum of males metallic from middle to front and/or aedeagus bilobed apically	25. <i>Odontocheila chrysis</i> (Fabricius)
—	Metallic color of male labrum does not reach the frontal border; aedeagus hooked apically ..	31
31 (30).	Elytra bronze black	28. <i>Odontocheila yunga</i> Huber
—	Elytra coppery	27. <i>Odontocheila fulgens</i> (Klug)
32 (28).	Labrum short in both sexes, with one tooth	33
—	Labrum long, with more than one tooth	29. <i>Pentacomia (Poecilochila) rhytidopteroides</i> (Horn)
33 (32).	Elytra with humeral lunule	30. <i>Pentacomia (Mesacanthina) cribrata argentina</i> (Lynch)
—	Elytra with humeral spot only or without any testaceous maculation at the shoulders	34
34 (33).	Elytra with lateral line, middle band and apical lunule	31. <i>Pentacomia (Mesacanthina) reductesignata</i> Horn
—	Elytra with central and apical spot only	32. <i>Pentacomia (Mesacanthina) punctum</i> (Klug)
35 (25).	Labrum with four setae	40
—	Labrum with more than four setae	36
36 (35).	Inner sac of aedeagus with flagellum	37
—	Inner sac of aedeagus without flagellum	46
37 (36).	Elytra without any maculation; flagellum of inner sac at the left side	35. <i>Cicindelidia rufoaenea</i> (Horn)
—	Elytra with some degree of maculation; flagellum at the right side	38
38 (37).	Aedeagus hooked apically	41
—	Aedeagus not as above	39
39 (38).	Pleurites and sternites densely setose	52
—	Pleurites and sternites glabrous or sparsely setose	43
40 (35).	Clypeus with several white setae	65. <i>Sumlinia hirsutifrons</i> (Sumlin)
—	Clypeus glabrous	64. <i>Sumlinia halophila</i> (Sumlin)
41 (38).	Labrum unidentate	62. <i>Brasiella (Gaymara) staudingeria</i> (Horn)
—	Labrum tridentate	42

- 42 (41). Shoulders with short white setae **63. *Brasiella (Gaymara) rotundatodilatata* (Horn)**
 — Shoulders without setae **61. *Brasiella (Gaymara) chlorosticta* (Kollar)**
- 43 (39). Elytral maculation very wide, covering much of elytral surface
 **36. *Cylindera (Cylindera) confluentesignata* (Horn)**
 — Elytral maculation not as above **44**
- 44 (43). Elytral maculation consists of slender lunules
 **52. *Cylindera (Plectographa) stamatoivi* (Sumlin)**
 — Elytral maculation absent or consisting of small spots **45**
- 45 (44). Labrum with four or more teeth **37. *Cylindera (Cylindera) morio* (Klug)**
 — Labrum unidentate **38. *Cylindera (Cylindera) obsoletesingata* (Horn)**
- 46 (36). Labrum edentate **47**
 — Labrum with one tooth or more **49**
- 47 (46). Elytral apex with maculation **58. *Brasiella (Brasiella) cuyabaensis* Mandl**
 — Elytral apex without maculation **48**
- 48 (47). Dorsal color red or reddish-brown **57. *Brasiella (Brasiella) aureola aureola* (Klug)**
 — Dorsal color black or black-brown **56. *Brasiella (Brasiella) obscurella* (Klug)**
- 49 (46). Elytra ovate, with three black depressions in disk
 **54. *Brasiella (Brasiella) obscurovata* Sumlin**
 — Elytra nearly parallel-sided, without black depressions in disk **50**
- 50 (49). Humeral spot visible in dorsal view
 **55. *Brasiella (Brasiella) argentata argentata* (Fabricius)**
 — Humeral spot not as above **51**
- 51 (50). Labrum not produced anteriorly; humeral spot on latero-ventral side of shoulder, not visible in
 dorsal view **60. *Brasiella (Brasiella) misella misella* (Chaudoir)**
 — Labrum produced anteriorly; humeral spot absent
 **59. *Brasiella (Brasiella) dolosula* Rivalier**
- 52 (39). Genae with setae **55**
 — Genae without setae **53**
- 53 (52). Basal half of elytra with many white setae; elytral maculation with a lateral marginal line from
 shoulder to suture **54. *Cylindera (Plectographa) eugeni* (Laporte de Castelnau)**
 — Basal half of elytra without white setae **54**
- 54 (53). Elytral maculation with a marginal line ... **40. *Cylindera (Plectographa) sinuosa* (Brullé)**
 — Elytral maculation without a marginal line
 **51. *Cylindera (Plectographa) apiata apiata* (Dejean)**
- 55 (52). Clypeus nearly covered from view by thick, white setae **56**
 — Clypeus setose or glabrous, but not nearly covered from view **57**
- 56 (55). Elytral maculae almost confluent, not isolated; pigmented parts absent or spot-like only
 **41a. *Cylindera (Plectographa) nivea nivea* (Kirby)**
 — Pigmented parts of elytra larger; at least the outline of the middle band is visible
 **41b. *Cylindera (Plectographa) nivea orbigny* (Guérin-Ménéville)**

57 (55). Labrum with dark or brownish pigment at its center	58
— Labrum without dark or brownish pigment at its center	60
58 (57). Elytral apex with microserrations	
..... 50. <i>Cylindera (Plectographa) chiliensis</i> (Audouin and Brullé)	
— Elytral apex without microserrations	59
59 (58). Middle band wide expanded and obliquely crossing the elytral disc	
..... 49. <i>Cylindera (Plectographa) chubuti</i> Cassola	
— Middle band thin and/or not obliquely crossing the elytral disc	
..... 48. <i>Cylindera (Plectographa) gormazi</i> (Reed)	
60 (57). Antennal scape with several white setae 42. <i>Cylindera (Plectographa) ramosa</i> (Brullé)	
— Antennal scape with a single seta or pit	61
61 (60). Elytra shiny, punctate	39. <i>Cylindera (Plectographa) hassenteufeli</i> (Mandl)
— Elytra dull, granulate or granulate/foveolate	62
62 (61). Pronotum widest at posterior end; disc of pronotum glabrous or with few setae	
..... 43. <i>Cylindera (Plectographa) mixtula</i> (Horn)	
— Pronotum widest at anterior end or middle; disc of pronotum with many setae	63
63 (62). Maculation not contacting lateral edge of elytron in middle third	
..... 44. <i>Cylindera (Plectographa) ritsemae</i> (Horn)	
— Maculation contacting lateral edge of elytron in middle third	64
64 (63). Tip of mandibles elongated, more than three times as long as the teeth; clypeus with thick white setae	69
— Tip of mandibles shorter, not as above; setae on clypeus thin	65
65 (64). Dorsal color black or brownish-black; labral length/width > 0.5	66
— Dorsal color brown, green or reddish-brown; labral length/width < 0.5	67
66 (65). Humeral lunule isolated; marginal band well developed and connected with middle band	
..... 46b. <i>Cylindera (Plectographa) melaleuca reedi</i> (Horn)	
— Humeral lunule connected with middle band; marginal band absent or small, sometimes with small connection to middle band	
..... 46a. <i>Cylindera (Plectographa) melaleuca melaleuca</i> (Dejean)	
67 (65). Elytral maculae isolated, especially not connected at lateral margin	
..... 45a. <i>Cylindera (Plectographa) drakei drakei</i> (Horn)	
— Elytral maculae connected	68
68 (67). Head and pronotum green; elytral maculation very wide	
..... 45c. <i>Cylindera (Plectographa) drakei latefascia</i> (Sumlin)	
— Head and pronotum brown; elytral maculation not as wide	
..... 45b. <i>Cylindera (Plectographa) drakei pseudochiloleuca</i> (Horn)	
69 (64). Elytral markings isolated	
..... 47a. <i>Cylindera (Plectographa) patagonica patagonica</i> (Brullé)	
— Elytral markings confluent	70
70 (69). Ground color brownish green to brown; total length of beetles < 10 mm	
..... 47c. <i>Cylindera (Plectographa) patagonica bergiana</i> (Horn)	

- Ground color blue or green; total length of beetles > 10 mm
 **47b. *Cylindera (Plectographa) patagonica cherubim* (Chevrolat)**

Species

1. *Ctenostoma (Myrmecilla) ichneumoneum ellipticum* Naviaux, 1998 (Fig. 1)

Ctenostoma (Myrmecilla) ichneumoneum Dejean: Sarmiento 1965: 29-32; Cassola and Pearson 2001: 10.
Ctenostoma (Myrmecilla) ichneumoneum ellipticum: Naviaux 1998: 140, 141; Sawada and Wiesner 2002: 289; Erwin 2007: 186.

Distribution (Fig. 105). Argentina (Misiones), Brazil (Santa Catarina, Rio de Janeiro, Espirito Santo), Paraguay.

Localities. Misiones: Concepción (Sarmiento 1965: 29).

2. *Picnochile fallaciosa* (Chevrolat, 1854) (Fig. 2)

Picnochile fallaciosa: Bruch 1911: 145.

Picnochile fallaciosa: Wiesner 1992: 37; Cassola and Pearson 2001: 11; Erwin and Pearson 2008: 56.

Distribution (Fig. 106). Argentina (Chubut, Tierra del Fuego), Chile (Estrecho de Magallanes).

Localities. Tierra del Fuego: (Bruch 1911: 145). **Chubut:** (Bruch 1911: 145).

3. *Phaeoxantha bucephala* (Horn, 1909) (Fig. 3, 102)

Megacephala (Phaeoxantha) bucephala: Bruch 1911: 145; Horn 1926: 66; Wiesner 1992: 45.

Phaeoxantha bucephala: Pearson et al. 1999: 403; Cassola and Pearson 2001: 11; Sawada and Wiesner 2002: 289; Erwin and Pearson 2008: 52.

Distribution (Fig. 107). Argentina (Chaco, Formosa, Jujuy, Salta, Santiago del Estero, Tucumán), Bolivia, SW Brazil, Paraguay.

Records. Salta: Pocitos, xii.1977, 1 female; Las Lajitas, ii.1991, 1 male; Dep.Orán, Aguas Blancas, Río Bermejo, 390/400 m, J. Carreras, 21./22.xi.1992, 1 male, 3 females (JWGC); Río Seco, 26 km N Embarcación, night collection, leg. A. Bandinelli, 15.i.2013, 3 males, 9 females (ABIC). **Jujuy:** San Pedro, El Acheral, Río Lavayen, xi.1984, 1 male, 3 females (JWGC). **Chaco:** Depto Gral. Güemes, Pozo La Gringa, i.1996, 1 male (JWGC).

Localities. Santiago del Estero: (Bruch 1911: 145). **Tucumán:** (Bruch 1911: 145). **Salta:** (Bruch 1911: 145). **Jujuy:** (Erwin and Pearson 2008: 52). **Formosa:** (Erwin and Pearson 2008: 52).

Remarks. New record for Chaco.

4. *Phaeoxantha cruciata cruciata* (Brullé, 1837) (Fig. 4, 102)

Megacephala (Phaeoxantha) cruciata: Bruch 1911: 145; Wiesner 1992: 45.

Phaeoxantha cruciata: Pearson et al. 1999: 404; Cassola and Pearson 2001: 11; Sawada and Wiesner 2002: 289; Erwin and Pearson 2008: 52.

Distribution (Fig. 108). Argentina (Buenos Aires, Chaco, Entre Rios, Salta, Santa Fé), Bolivia, Brazil (Para), Paraguay, Uruguay.

Records. Entre Rios: Dept. Colón, Liebig, ii.1975, 1 male, 1 female; i.1990, 7 males, 3 females; 27.i.1990, 1 male; ii.1995, 1 male (JWGC); **Salta:** Río Seco, 26 km N Embarcación, night collection, leg. A. Bandinelli, 15.i.2013, 8 males, 4 females (ABIC).

Localities. Buenos Aires: (Bruch 1911: 145). **Santa Fé:** (Bruch 1911: 145). **Chaco:** (Erwin and Pearson 2008: 52).

Remarks. New records for Entre Rios and Salta.

5. *Phaeoxantha tremolerasi* (Horn, 1909) (Fig. 5)

Megacephala (Phaeoxantha) Tremolerasi: Bruch 1911: 146.

Phaeoxantha tremolerasi: Cassola and Pearson 2001: 11; Erwin and Pearson 2008: 55.

Distribution (Fig. 109). Argentina (Entre Rios, Misiones), Uruguay (Salto).

Records. Entre Rios: Palmar, i.1974, 2 males, 4 females; Colón, ii.1976, 1 male, 1 female; 12.xii.1981, 2 females; xii.1987, 1 male, 1 female; Liebig, i.1995, 1 male, 1 female (JWGC). **Misiones:** Iguazú, leg. Foerster, ix.1976, 1 male, 1 female; Dos de Mayo, xii.1980, 1 male; 500m, iv.1994, 1 female (JWGC).

Localities. Entre Rios: Concordia (Bruch 1911: 146).

Remarks. New record for Misiones.

6. *Phaeoxantha aequinoctialis aequinoctialis* (Dejean, 1825) (Fig. 6)

Megacephala (Phaeoxantha) aequinoctialis: Bruch 1911: 145; Horn 1926: 67; Wiesner 1992: 45.

Phaeoxantha aequinoctialis: Pearson et al. 1999: 402; Cassola and Pearson 2001: 11; Erwin and Pearson 2008: 50.

Distribution (Fig. 110). Argentina (Corrientes, Salta, Río Negro), Brazil (Goias), Bolivia (Chapare), Colombia, Ecuador, Venezuela (Buena Vista, Ciudad Bolívar), French Guiana, Guyana (Demerare), Peru.

Records. Corrientes: 1 male (JWGC).

Localities. Río Negro: (Horn 1926: 67). **Salta:** Orán (Bruch 1911: 145).

Remarks. New record for Corrientes.

7. *Phaeoxantha laminata* (Perty, 1830) (Fig. 7)

Megacephala (Phaeoxantha) limata: Bruch 1911: 146.

Phaeoxantha limata: Cassola and Pearson 2001: 11; Sawada and Wiesner 2002: 289; Erwin and Pearson 2008: 53, 54.

Phaeoxantha laminata (Perty, 1830): Naviaux 2008: 512.

Distribution (Fig. 111). Argentina (Misiones, ?Río Negro), Brazil (Amazonas, Mato Grosso, Para, Rondonia), Paraguay, Peru (Pebas, Sivia).

Localities. ?**Río Negro:** (Erwin and Pearson 2008: 54). **Misiones:** (Bruch 1911: 146).

8. *Metriocheila nigricollis* (Reiche, 1842) (Fig. 8, 97)

Megacephala (Metriocheila) nigricollis: Bruch 1911: 145; Horn 1926: 66.

Megacephala (Metriocheila) nigricollis: Wiesner 1992: 44.

Metriocheila nigricollis: Pearson et al. 1999: 401, 402; Cassola and Pearson 2001: 11; Erwin and Pearson 2008: 25.

Distribution (Fig. 112). Argentina (Catamarca, Jujuy, Salta, Tucumán), Bolivia, Colombia, Ecuador, Peru.

Records. Tucumán: San Pedro de Colalao, 1100 m, leg. A. Bandinelli, 8.i.2010, 1 female (ABIC). **Salta:** Río Blanco, Orán, iii.1994, 1 male; Dep. Orán, Angosto del Parani, 1700/1800 m, J. Carreras leg., 4./6.xi.1994, 1 male, 5 females (JWGC).

Localities. Catamarca: (Bruch 1911: 145). **Tucumán:** (Bruch 1911: 145). **Salta:** (Bruch 1911: 145). **Jujuy:** (Bruch 1911: 145).

9. *Tetracha (Microtetracha) germaini* Chaudoir, 1865 (Fig. 9, 96)

Megacephala (Tetracha) Germaini: Bruch 1911: 147; Horn 1926: 68; Wiesner 1992: 46.

Megacephala germaini: Sarmiento 1969: 151.

Tetracha germaini: Pearson, Guerra and Brzoska 1999: 412; Cassola and Pearson 2001: 11.

Tetracha (Microtetracha) germaini: Naviaux 2007: 30, 31; Erwin and Pearson 2008: 79.

Distribution (Fig. 113). Argentina (Buenos Aires, Chubut, Córdoba, La Rioja, Mendoza, San Juan, Santiago del Estero, Río Negro), Bolivia (Santa Cruz).

Records. Córdoba: Balnearia, leg. A. Ugarte-Peña, 7.-25.i.2000, 1 male (JWGC). **San Juan:** Ruta 142, 7.xii.1997, 2 males (JWGC). **La Rioja:** Mascasin, i.1962, 1 male (JWGC). **Santiago del Estero:** Río Saladillo, Salinas de Ambargasta, 68 km S Ciudad Loreto, night collection, leg. A. Bandinelli, 19.xii.2010, 1 male, 2 females; 16.i.2012, 2 males, 1 female (ABIC).

Localities. Chubut: (Bruch 1911: 147). **Río Negro:** (Naviaux 2007: 31). **Buenos Aires:** Pedro Luro (Sarmiento 1969: 153). **Córdoba:** (Sarmiento 1969: 153). **Mendoza:** (Bruch 1911: 147). **La Rioja:** Chañar (Sarmiento 1969: 153). **Santiago del Estero:** (Naviaux 2007: 31).

Remarks. New record for San Juan.

10. *Tetracha (Tetracha) brasiliensis brasiliensis* (Kirby, 1818) (Fig. 10)

Megacephala (Tetracha) brasiliensis: Bruch 1911: 146; Horn 1926: 77; Wiesner 1992: 51.

Tetracha brasiliensis: Pearson, Guerra and Brzoska 1999: 408, 409; Cassola and Pearson 2001: 12; Naviaux 2007: 73, 74; Erwin and Pearson 2008: 68.

Distribution (Fig. 114). Argentina (Buenos Aires, Chaco, Córdoba, Corrientes, Entre Ríos, Formosa, Mendoza, Misiones, Salta, Santa Fé, Santiago del Estero, Tucumán), Bolivia (Cochabamba, Jhilo, Santa Cruz), Brazil (Bahia, Espírito Santo, Mato Grosso, Minas Gerais, Sao Paulo, Rio de Janeiro, Rio Grande do Sul, Santa Catarina,), Paraguay, Peru.

Records. Buenos Aires: San Isidro, i.1974, 1 female (JWGC). **Entre Rios:** xii.1972, 1 male; Concordia, i.1975, 3 males, 2 females; Liebig, ii.1975, 1 male, 1 female; Salto Grande, iii.1978, 1 female; Federacion, i.1981, 6 males, 4 females; Uruguay R., 1.i.1990, 2 females; Colón, 1v.i.1993, 2 females (JWGC). **Santa Fé:** San Justo, xii.1977, 1 male (JWGC). **Salta:** Tartagal, i.1971, 1 male (JWGC). **Córdoba:** Laguna Mar Chiquita, 35 km E Balnearia, 30°57,885'S, 62°26,262'W, night collection, leg. Aligi Bandinelli, 19.xii.2010, 2 males, 2 females (JWGC), 12 males, 15 females; 19.xii.2010, 1 male, 4 females; 16.i.2012, 6 males, 2 females (ABIC), 1 male, 1 female (AKCC).

Localities. Buenos Aires: (Wiesner 1992: 199). **Córdoba:** 24 mi S of Recreo, 9.ii.1951 (Sumlin 1979: 113); W of Sierra Grande, 5 km S Nono, Río de los Sauces, 14.-15.xi.1999; (Cassola and Werner 2001: 9). **La Rioja:** Mascasin (Wiesner 1992: 216). **Chaco:** (Erwin and Pearson 2008: 219).

Remarks. New records for Catamarca and Santiago del Estero. - Due to the kindness of Isabelle Zürcher-Pfander, Naturhistorisches Museum, Basel, Switzerland the first author had the opportunity to compare the holotype male and allotype female of *Cylindera (Plectographa) hassenteufeli* (Mandl, 1960) (both in the Basel collection) with a paratype female of *Cylindera (Plectographa) siccalacicola* (Sumlin, 1979) (in JWGC) and several males and females associated with the latter (in ABIC and JWGC). The result of this

examination is that, as Sumlin (1993: 34) assumed, both taxa are identical. The characters given by Sumlin in his key (1993: 33) to separate taxa are not suitable. *Cylindera siccalacicola* is herein placed into synonymy of *C. hassenteufeli*.

40. *Cylindera (Plectographa) sinuosa* (Brullé, 1837) (Fig. 45, 46)

Cicindela sinuosa: Bruch 1911: 150; Horn 1926: 305.

Cylindera sinuosa: Sarmiento 1966: 44; 1967: 215.

Cicindela (Cylindera) sinuosa: Sumlin 1979: 108.

Cicindela (Plectographa) sinuosa: Sumlin 1993: 34; Pearson et al. 1999: 494.

Cylindera (Plectographa) sinuosa: Wiesner 1992: 199; Cassola and Pearson 2001: 17; Sawada and Wiesner 2002: 300; Erwin and Pearson 2008: 220.

Distribution (Fig. 143). Argentina (Corrientes, Entre Rios, Misiones), Bolivia, Paraguay, Uruguay.

A. Bandinelli, 13.xii.2010, 6 males, 4 females (ABIC), 1 male, 1 female (MZUF), 1 male (AKCC), 1 female (JWGC); 21.xii.2010, 5 males (ABIC), 1 male (JWGC); 21.xii.2010 at lights, 1 female (ABIC); Río Belén, c/o El Eje, 40 km N Belén, 2200 m, 14.i.2010, 2 females (ABIC), 1 female (AKCC).

Localities. Río Negro: (Erwin and Pearson 2008: 208). **Buenos Aires:** (Erwin and Pearson 2008: 208). **Mendoza:** (Bruch 1911: 149). **Tucumán:** (Bruch 1911: 149). **Salta:** (Sarmiento 1966: 43).

Remarks. New records for Catamarca, Córdoba and San Juan.

45b. *Cylindera (Plectographa) drakei pseudochiloleuca* (Horn, 1908) (Fig. 59)

Cicindela Drakei pseudochiloleuca: Bruch 1911: 149; Horn 1926: 310.

Cicindela (Cylindera) drakei pseudochiloleuca: Sumlin 1979: 109.

Cylindera (Plectographa) drakei pseudochiloleuca: Wiesner 1992: 200; Erwin and Pearson 2008: 209.

Distribution (Fig. 150). Argentina (Salta, Tucumán).

Records. Salta: Piedra del Molino, 3600m, i.1988, 1 male; Quebrada del Toro, c/o Sta. Rosa de Tastil, 3400 m, leg. Aligi Bandinelli, 10.i.2010, 1 male, 1 female (JWGC), 7 males (ABIC), 1 male (AKCC).

Localities. Tucumán: Tafi (Bruch 1911: 149).

Remarks. New record for Salta.

45c. *Cylindera (Plectographa) drakei latifascia* (Sumlin, 1979) (Fig. 60)

Cicindela (Cylindera) drakei latifascia: Sumlin 1979: 109, 110.

Cylindera (Plectographa) drakei latifascia: Wiesner 1992: 200; Erwin and Pearson 2008: 208.

Distribution (Fig. 151). Argentina (Santiago del Estero).

Localities. **Santiago del Estero:** Termas de Río Hondo, 30.xii.1975 (Sumlin 1979: 110).

Remarks. Sumlin (1979) listed the depository of the holotype, and only specimen, of *C. d. latifascia* as the R. M. Bohart Museum of Entomology, University of California, Davis collection. Unfortunately, the museum staff was unable to locate the specimen and it is presumed lost. A remake of Sumlin's figure is shown in the plate.

46a. *Cylindera (Plectographa) melaleuca melaleuca* (Dejean, 1831) (Fig. 61, 62, 99, 101)

Cicindela melaleuca: Bruch 1911: 149; Horn 1926: 310, 311.

Cylindera melaleuca: Sarmiento 1966: 40; 1967: 213.

Cicindela (Cylindera) melaleuca: Sumlin 1979: 110, 111.

Cylindera (Plectographa) melaleuca: Wiesner 1992: 200; Cassola and Pearson 2001: 17; Erwin and Pearson 2008: 213, 214.

Distribution (Fig. 152). Argentina (Buenos Aires, Córdoba, La Pampa, Mendoza, Neuquén, Río Negro, Santa Fé), Brazil (Rio Grande do Sul), Uruguay.

Records. **Buenos Aires:** Laguna Perdices Monte, ii.1992, 1 female; Laguna Monte, 16.ii.1992, 1 female; Saladillo, Laguna Indio Muerto, J. Carreras leg., 19.ii.1995, 5 males, 1 female (JWGC); Laguna de Gomez, c/o Junin, leg. A. Bandinelli, 14.xii.2011, 3 males, 3 females (ABIC). **Santa Fé:** Border Santa Fé - Buenos Aires, Laguna la Picasa, 45 km E Rufino, leg. A. Bandinelli, 14.xii.2011, 1 female; Rufino, 34°21,164'S-62°25,781'W, 14.xii.2011, 1 male, 2 females (ABIC). **Córdoba:** Balnearia, leg. A. Ugarte-Peña, 7.-25.i.2000, 1 male, 2 females (JWGC); Ruta 9, near Oliva, 32°04,654'S, 63°32,355'W, leg. A. Bandinelli, 9.i.2013, 12 males, 12 females (ABIC).

Localities. **Río Negro:** (Erwin and Pearson 2008: 214). **Neuquén:** (Erwin and Pearson 2008: 214). **La Pampa:** (Sarmiento 1967: 213). **Buenos Aires:** San Fernando, xii.1962; Guamini, ii.1964; La Colina, 9.xii.1938 (Sumlin 1979: 111). **Mendoza:** (Bruch 1911: 149).

Remarks. New records for Córdoba and Santa Fé.

46b. *Cylindera (Plectographa) melaleuca reedi* (Horn, 1895) (Fig. 63)

Cicindela Drakei Reedi: Bruch 1911: 149; Horn 1926: 310.

Cicindela (Cylindera) melaleuca reedi: Sumlin 1979: 111.

Cylindera (Plectographa) melaleuca reedi: Wiesner 1992: 201; Erwin and Pearson 2008: 214.

Distribution. Argentina (Patagonia).

Localities. Patagonia (Bruch 1911: 149).

47a. *Cylindera (Plectographa) patagonica patagonica* (Brullé, 1837) (Fig. 64)

Cicindela patagonica: Bruch 1911: 150; Horn 1926: 311.

Cylindera patagonica: Sarmiento 1966: 43.

Cicindela (Cylindera) patagonica: Sumlin 1979: 114.

Cicindela (Plectographa) patagonica: Freitag and Barnes 1989: 303, 304.

Cylindera (Plectographa) patagonica: Wiesner 1992: 201; Cassola and Pearson 2001: 17; Erwin and Pearson 2008: 217, 218.

Distribution (Fig. 153). Argentina (Buenos Aires, Río Negro, Santa Cruz).

Localities. Santa Cruz: (Erwin and Pearson 2008: 218). **Río Negro:** (Horn 1926: 311). **Buenos Aires:** (Bruch 1911: 150).

47b. *Cylindera (Plectographa) patagonica cherubim* (Chevrolat, 1858) (Fig. 65)

Cicindela patagonica Cherubim: Bruch 1911: 150; Horn 1926: 311.

Cicindela (Cylindera) patagonica cherubim: Sumlin 1979: 114.

Cicindela (Plectographa) patagonica cherubim: Freitag and Barnes 1989: 303.

Cylindera (Plectographa) patagonica cherubim: Wiesner 1992: 201.

Distribution (Fig. 154). Argentina (Buenos Aires), Uruguay.

Localities. Buenos Aires: (Bruch 1911: 150).

47c. *Cylindera (Plectographa) patagonica bergiana* (Horn, 1895) (Fig. 66)

Cicindela patagonica Bergiana: Bruch 1911: 150; Horn 1926: 311.

Cicindela (Cylindera) patagonica bergiana: Sumlin 1979: 114.

Cicindela (Plectographa) patagonica bergiana: Freitag and Barnes 1989: 303.

Cylindera (Plectographa) patagonica bergiana: Wiesner 1992: 201.

Distribution (Fig. 155). Argentina (Buenos Aires), Brazil (Rio Grande do Sul), Uruguay.

Localities. Buenos Aires: Mar del Plata (Bruch 1911: 150).

Remarks. Horn (1895) discussed the color range of *Cylindera patagonica patagonica* ranged from the typical coppery green to blue with enlarged maculations, a form he called cherubim. In the same paper (based on two males from Montevideo, coll. Prof. Carlos Berg, and two males without locality data, coll. Horn) he described the form “*bergiana*”, which is coppery green, smaller than cherubim, with enlarged maculation and apical lunule and marginal band connected.

Horn did not put type labels on the two male specimens in his collection, however, his handwritten bluish label “*bergi*” is added to the pin of one of them. It is herein designated as lectotype. The other male, mentioned in the description, is designated as paralectotype.

Type depository. Lectotype male and paralectotype male in SDEI.

Type status. Lectotype male (**here designated**). Type labels: “Keitel” [handwritten, white, with black borders]; “*bergi*” [handwritten, light blue]; LECTOTYPE *Cylindera (Plectographa) patagonica bergiana* (HORN, 1895), ded J. Wiesner 2013 [printed, red]. Paralectotype male (here designated). Type labels: “Keitel” [handwritten, white, with black borders]; PARALECTOTYPE *Cylindera (Plectographa) patagonica bergiana* (HORN, 1895), ded J. Wiesner 2013 [printed, red].

Cylindera patagonica patagonica is readily recognized by its narrow elytral markings and its greenish brown to brown ground color. Its distribution is restricted from central and southern Argentina. The elytral maculations of the other two subspecies are broader. In Argentina they are restricted to the central and north-eastern parts of the country. The ground color of *Cylindera patagonica cherubim* is blue, occasionally green. The ground color of *Cylindera patagonica bergiana* is brownish green to brown. The body size (from apical tip to base of labrum) is an average smaller than 10 mm in *C. patagonica bergiana* and larger than 10 mm in *C. patagonica cherubim*.

48. *Cylindera (Plectographa) gormazi* (Reed, 1871) (Fig. 67)

Cicindela Gormazi: Bruch 1911: 149; Horn 1926: 310.

Cylindera gormazi: Sarmiento 1966: 44.

Cicindela (Cylindera) gormazi: Sumlin 1979: 113, 114.

Cylindera (Plectographa) gormazi: Wiesner 1992: 201; Cassola and Pearson 2001: 17; Erwin and Pearson 2008: 209, 210.

Distribution (Fig. 156). Argentina (Chubut), Chile (Llanquihue, Osorno).

Localities. Chubut: (Bruch 1911: 149).

49. *Cylindera (Plectographa) chubuti* Cassola, 1999 (Fig. 68, 69)

Cylindera (Plectographa) chubuti: Cassola 1999: 940-942; Cassola and Pearson 2001: 17; Erwin and Pearson 2008: 206, 207.

Distribution (Fig. 157). Argentina (Chubut).

Localities. Chubut: El Maitén, 8.ii.1966 (Cassola 1999: 940).

50. *Cylindera (Plectographa) chiliensis* (Audouin and Brullé, 1839) (Fig. 70)

Cicindela chilensis Solier, 1849: Bruch 1911: 149.

Cicindela chiliensis: Horn 1926: 311.

Cicindela (Cylindera) chiliensis: Sumlin 1979: 114.

Cylindera (Plectographa) chiliensis: Wiesner 1992: 201; Cassola and Pearson 2001: 17; Erwin and Pearson 2008: 206.

Distribution (Fig. 158). Argentina (Chubut, Neuquén, Río Negro), C Chile.

Records. Río Negro: Sc. Neuquén, Bariloche, i.1987, 1 female (JWGC). **Neuquén:** Las Lajas, i.1978, 1 male (JWGC).

Localities. Chubut: (Bruch 1911: 149).

Remarks. New records for Neuquén and Río Negro.

51. *Cylindera (Plectographa) apiata apiata* (Dejean, 1825) (Fig. 71, 99)

Cicindela apiata: Bruch 1911: 148; Horn 1926: 310.

Cylindera apiata: Sarmiento 1966: 39; 1967: 211.

Cicindela (Cylindera) apiata: Sumlin 1979: 114, 115.

Cicindela (Plectographa) apiata: Freitag and Barnes 1989: 305, 306.

Cylindera (Plectographa) apiata: Wiesner 1992: 201; Cassola and Pearson 2001: 17; Cassola and Werner 2001: 9; Sawada and Wiesner 2002: 301; Erwin and Pearson 2008: 205.

Distribution (Fig. 159). Argentina (Buenos Aires, Córdoba, Corrientes, Entre Ríos, La Pampa, Mendoza, Misiones, Neuquén, Río Negro, San Luis, Santa Fé, Santiago del Estero, Tucumán), Brazil (Mato Grosso, Minas Gerais, Rio de Janeiro, Rio Grande do Sul, Sao Paulo), Uruguay.

Records. San Jose, 15.xi.1973 (Sumlin 1979: 115). **Córdoba:** 22 km S Alta Gracia, 18.xi.1975; Capilla del Monte; Cosquin, 1.-9.iii.1920 (Sumlin 1979: 115); W of Sierra Grande, 5 km S Nono, Río de los Sauces, 14.-15.xi.1999; betw. Córdoba and Laguna Mar Chiquita, 10 km W Balnearia, riverbank, 2.xii.1999 (Cassola and Werner 2001: 9). **San Luis:** (Bruch 1911: 148). **Mendoza:** (Bruch 1911: 148). **Santiago del Estero:** Termas de Río Hondo, 30.xii.1975 (Sumlin 1979: 115). **Tucumán:** (Bruch 1911: 148).

Remarks. New records for Corrientes, La Pampa, Misiones, Neuquén and Santa Fé.

52. *Cylindera (Plectographa) stamatovi* (Sumlin, 1979), **new combination** (Fig. 72, 73, 90-94)

Cicindela (Brasiella) stamatovi: Sumlin 1979: 104, 105.

Brasiella (Brasiella) stamatovi: Wiesner 1992: 205; Cassola and Pearson 2001: 18; Erwin and Pearson 2008: 116.

Distribution (Fig. 160). Argentina (Tucumán).

Localities. Tucumán: Tucuman, ii.1950 (Sumlin 1979: 104).

Remarks. Due to the kindness of Lee H. Herman (AMNH) it was possible to study Sumlin's type material. Its aedeagus (Fig. 92) lacks an apical hook, the internal sac has a flagellum and dorsal spatulate sclerites. Aedeagi of the *Brasiella* have an apical hook and/or are lacking a flagellum. Aedeagi of *Cylindera (Cylindera)* have no dorsal spatulate sclerites. As the aedeagus of *C. stamatovi* lacks an apical hook and bears dorsal spatulate sclerites, it is transferred from *Brasiella*, where it was tentatively placed by Sumlin, to *Cylindera (Plectographa)* near *C. eugeni* (Laporte de Castelnau, 1834).

53. *Cylindera (Plectographa) eugeni* (Laporte de Castelnau, 1834) (Fig. 74)*Cicindela Eugeni*: Bruch 1911: 149; Horn 1926: 309.*Cylindera eugeni*: Sarmiento 1966: 38.*Cicindela (Cylindera) eugeni*: Sumlin 1979: 107.*Cylindera (Plectographa) eugeni*: Wiesner 1992: 201; Cassola and Werner 2001: 7; Cassola and Pearson 2001: 17; Cassola 2002: 46, 47; Erwin and Pearson 2008: 209.**Distribution** (Fig. 161). Summary

With these recent collection records, the number of tiger beetle species known from Argentina (Fig. 103) rises to 65 species, nine of which (13.8 %) are endemic, 36 (55.4 %) are also known from Brazil, 34 (52.3 %) from Bolivia, 31 (47.7 %) from Paraguay, 17 (26.2 %) from Uruguay and 3 (4.6 %) from Chile. The number of tiger beetle species known from each province of Argentina is as follows (% in brackets): Tierra del Fuego = 1 (1.5), Santa Cruz = 2 (3.1), Neuquén = 4 (6.2), La Rioja = 6 (9.2), La Pampa = 7 (10.8), San Luis = 8 (12.3), Chubut = 9 (13.8), San Juan = 9 (13.8), Mendoza = 10 (15.4), Santa Fé = 11 (16.9), Corrientes = 12 (18.5), Río Negro = 15 (23.1), Entre Ríos = 15 (23.1), Formosa = 16 (24.6), Catamarca = 17 (26.2), Tucumán = 18 (27.7), Santiago del Estero = 19 (29.2), Córdoba = 20 (30.8), Buenos Aires = 21 (32.3), Chaco = 23 (35.4), Jujuy = 23 (35.4), Misiones = 23 (35.4), Salta = 28 (43.1).

Bruch (1911: 147) mentioned *Tetracha (Tetracha) sommeri* Chaudoir, 1850 from Misiones and *Odontocheila nodicornis* (Dejean, 1825) from Chaco. Wiesner (1992: 50) mentioned *Tetracha (Tetracha) sommeri* Chaudoir, 1850 from Chaco. These records have not been confirmed and therefore were not included here.

Wiesner (1992: 41) erroneously cited Río Tapajoz from Argentina as a record for *Aniara sepulcralis* (Fabricius, 1801), actually this location is in Mato Grosso, Brazil. *Aniara sepulcralis* is thus not known from Argentina.

Cassola (1997: 48) mentioned 6 specimens of *Pseudoxycheila quechua* from Argentina, 1973; however, we were unable to locate specimens to confirm this record.

Cassola and Pearson (2001) listed 72 species of which 12 are endemic. The difference with our recording 65 species, 9 of which are endemic is due to the following: *Aniara sepulcralis* see above. *Tetracha biprolongata* Horn, 1937 is a synonym of *Tetracha distinguenda* (Dejean, 1831); *Tetracha steinheili*

(Horn, 1900) is a synonym of *Tetracha lucifera* (Erichson, 1847) which has thus far not been collected in Argentina; no verified Argentinian specimens for *Tetracha chacoensis* (Sawada and Wiesner, 1997), *Tetracha pseudofulgida* (Mandl, 1963), *Tetracha affinis* Dejean, 1831, *Tetracha lafertei* Thomson, 1857, *Tetracha sobrina* (Dejean, 1831), *Tetracha coerulea* Lucas, 1857, and *Pentacomia (Poecilochila) lacordairei* (Gory, 1833) were available for study. *Cylindera (Plectographa) siccalacicola* (Sumlin, 1979) is considered a synonym of *Cylindera (Plectographa) hassenteufeli* (Mandl, 1960); *Brasiella (Brasiella) argentinica* (Mandl, 1963) is a synonym of *Brasiella argentata* (Dejean, 1831). The endemic *Tetracha (Neotetracha) quadrata* was described by Roger Naviaux in 2007. *Tetracha (Neotetracha) affinis* (Dejean, 1831) is mentioned instead of *Tetracha (Neotetracha) brevisulcata* Horn, 1907. *Tetracha (Neotetracha) prolongata* (Horn, 1932) and *Brasiella (Brasiella) obscurvata* Sumlin, 1993 are mentioned as endemic, but are now known from Bolivia, too. *Phaeoxantha laminata* (Perty, 1830) is not mentioned as occurring in Argentina.

Acknowledgments

We are indebted to Lutz Behne, Müncheberg, Fabio Cassola, Roma, Lee H. Herman, New York, NY, Roger Naviaux, Domérat and Isabelle Zürcher-Pfander, Basel for loan of material, David L. Pearson, Tempe, AZ and Mike Kippenhan, McMinnville, OR for proof reading of the manuscript and Peter Schüle, Herrenberg for the excellent photos and drawings.
