Analysis of Two Muster Registers from Krupina (Korpona)¹

ZOLTÁN PÉTER BAGI

*Hungarian National Archives Csongrád County Archives,
Szeged, Hungary*

Abstract: During the recruitment of army against the Ottomans commissioned officials wrote muster registers and name lists of recruited soldiers. Two registers written in German are preserved in 1553 and 1554 from Krupina. Commander of the army at Krupina was officially János Krusich, but part of the army under his command were other lower officers. The registers inform about tens of names of soldiers from the ranks of infantry and cavalry, as well as about their month's payment. Names of soldiers show their different origin. Muster registers, in addition, indicating the incomplete number of military forces.

Keywords: muster register, organization of army, military ranks, Ottoman-Hungarian conflict, Krupina.

The basis of the early modern army recruitment and army organization was the so-called muster. Through this, the person appointed by the monarch or aristocracy inspected the recruits in order to prevent potential fraud or malpractice; they checked whether the numbers of the unit equal the pre-negotiated numbers in the recruitment document or *Bestallung*. The names of the recruits were also recorded, their arms and gear examined. If everything was found in order, the newly recruited were sworn to the recruiter and the first month's payment was distributed. Apart from its symbolic significance, further payments were also made only after more musters, with the reinspection of the numbers, weapons, and equipment of the unit, also registering any changes. Unfortunately, the majority of the so-called muster registers where these data were recorded, along with the muster reports, were lost during the passing centuries (some were misplaced and lost, some burned, and many were eventually dis-

¹ This paper was supported by the János Bolyai Research Scholarship of the Hungarian Academy of Sciences.

carded by archivists).² Therefore, the two muster registers made in 1553 and 1554 by the appointed mustering officials at the army at Krupina are of great historical value. Apart from their uniqueness, further analysis of the original German-language documents in the appendix can yield important help for the researchers of later ages, to understand and assess the Hungarian army organization. I propose the examination of the muster registers from three aspects. First, the precise nature of János Krusich' position that he held in Krupina in 1553–1554 is to be clarified. Second, this makes it possible to present the organization of the Krupina army. Third, the composition and purpose of the army assigned to Krupina by the emperor could be examined in relation to the above findings.

A labyrinth of concepts

Captains/*kapitány*s and lieutenants/*hadnagy*s – *Hauptmanns* and *Leutenants*

A thorough study of the documents show that several persons are listed as *Hauptmanns*, with Krusich being the foremost of them. In the 16th century (as well), each *Fähnlein* (standard, *zászló* in Hungarian) was headed by one such person, in the cases of both cavalry and infantry. Today, this military rank in the German *Bundeswehr* or in the Austrian *Bundesheer* is a middle element of a well-defined line of command. However, the position had a very broad meaning in the 16th century, easier to describe than to define. Their tasks included not only military, but other administrative aspects as well.³ Accordingly, both cavalry and infantry used the concept to refer to a leader, head or commander of the *zászló*. Synonyms for the words *Fähnlein* and *Hauptmann* existed in the Western European army organization as well. The Walloon, French and Lotharingian armies featured the words company (Compagnie)⁴ or cornet (*squadrigelie oder cornette*)⁵, and captain/*kapitány* (*Capitan*).⁶ The latter office was known and used

⁶ ÖStA KA Alte Feldakten 1600/11/1.

in the 16th century Hungarian language as well, though interchangeably with the term *hadnagy* (which was used significantly more frequently, as statistical analysis proves). The usage ratio in the so far studied documents from 1550–1566 is 1:4.⁷ However, both terms referred to the same meaning. *Kapitány* originates from the Latin *caput*, with meaning ‘head’. *Hadnagy* was the -nagy (great, chief) of the had (army), the ‘nagy’ syllable denoting chief-ness, head-ness again. Accordingly, it could refer to the commanding person of even several hundreds strong cavalry and infantry units – with a field army constituting of these *hadnagy*-ed units.⁸

Another term appears in the documents, referring to both cavalry and infantry, the modern translation of which is also problematic today, considering the above notions. This is *Leutenant* (appearing as *Leuttinanndt* and *Leyttinanndt* in the texts), which would probably translate to lieutenant/*hadnagy* today. As mentioned before, the latter Hungarian term meant a high-ranking military officer in medieval and early modern times. Therefore, translating *Leutenant* to this Hungarian word would be a major mistake. What did *Leutenant* mean in the 16th century, then? The word was originally adopted in the German from French, with its original form being the *lieutenant* also used today. This was created from the combination of two elements: *lieu* is a shortened version of *au lieu de*, meaning ‘in lieu of’, ‘instead of’. The second part is *tenant*, meaning keeping or bearing.⁹ Thus it can be inferred that a 16th or 17th century *Leutenant* was an officer who represented someone else in his office, was someone’s vice/deputy.¹⁰

To sum up, though these terms are in use today, they had a very differing meaning in the 16th century, which makes their precise translation dubious.

Who commands whom? Organization of the army

In 1899 the excellent historian, turkologist and archivist Mihály Matunák replied in the journal *Századok* to Lajos Kopf as follows: "The king appointed Krusich as chief captain [*főkapitány*] so that the strongholds of Čabrad' [Csábrág], Bzovík [Bozók] and Sitno [Szitnya] would be under his supervision". Later he commented on his regained freedom that "afterward, Krusich resumed the chief captainship of the aforementioned strongholds."¹¹ What was actually the so-called chief captainship mentioned by Matunák? A field army consisted of several units led by *hadnagys/kapitánys*, under the command of an appointed chief *hadnagy* (*főhadnagy*), or more often a chief *kapitány* from the late 16th century on. These occasion-based appointments distinguished the assigned persons from the *hadnagys* of the subordinated cavalry and infantry contingents. An example is Veszprém in 1593. Ferranto Samaria de Speciacasa served as *Oberhauptmann* or *főkapitány*, with Péter Eörsi as the *Hauptmann* of the Hungarian cavalry and János Nagy as the *Hauptmann* of the infantry.¹² However, this meant a sort of *primus inter pares* state of affairs, as Samarian de Speciacasa himself also commanded a unit to which he was *Hauptmann*. As more than one *Hauptmann*-led units were stationed at Veszprém, there was a need for an officer to whom they could report, but they were not his subordinates, as the Italian officer could not replace, appoint or dismiss them. Most of time, the office was just referred to as *Hauptmann*. Does the same apply to Krusich, according to the muster registers? The instructions for Krusich are not extant, thus it is a hard question to answer today.¹³ On the one hand, the structure of the muster registers prove that multiple *Hauptmann*-led units existed. Krusich, heading the cavalry, but the Czech and (after the Ottoman occupation of Filákovo [Fülel]) the Hungarian infantry leaders also handed in documents stating that they received the arranged payments of their men. Customs of the period dictates that

only the highest officers were entitled to do so, as they served a kind of patriarchic role over their recruits. The contemporary documents collected and translated (to Slovakian) by Pavol Maliniak also show that Krupina had several distinct *Hauptmann*-ships in parallel. The addressing of a letter from king Ferdinand I, written on 19 November 1554 in Vienna, reads as follows: “Salutations to my kapitány/hadnagy János Krusich and all my other soldiers and subjects at Krupina”.¹⁴ Another document, written on 22 March 1559 at Nitra [Nyitra] also clearly refers to Krusich’s exact office, addressing him as the hadnagy/kapitány of the royal-imperial cavalry at Krupina.¹⁵ All this suggests that Krusich must have cooperated, in every important regard, with the *Hauptmanns* of the Czech and Hungarian infantries stationed at the town. Their relation was not that of superior and subordinate, but more that of equals. Then, what is the reason for listing Krusich’s name in all entries of the Aulic War Council (*Hofkriegsrat*)? The only explanation is that he was considered the one with the most authority among the leaders of the town’s military unity. This does not mean, however, that he had any actual command over the other *Hauptmanns*: he did not receive orders to their enlistment, he did not have their men recruited and it was not him who distributed their payments to them.

Apart from the chain of command, the structure of a zászló unit is also worth inspecting. Cavalrymen (called *katonas* in the 16th century, meaning simply ‘soldier’ in Hungarian today) were organized into so-called knightly retinues (Hungarian: *lovagi szerek*), which were identical to the German *lange Reihe* and French *Gleve*.¹⁶ One of such consisted of an aristocrat leader and his mounted retinue of 3-10 men, mostly commoners. This also meant that the muster registers listed only the name of the knight, not his men. However, the number of their horses was recorded. A good example is young Ferenc Wathay, serving at Csesznek in 1585–1586 for about 11 months as the knight of four cavalrymen. After the last yearly muster, however, he left the stronghold and continued to serve in the Hungarian army at

¹⁴ MALINIÁK, P. – NAGY, I. (eds.): *Turek na obzore*, 152.

¹⁵ MALINIÁK, P. – NAGY, I. (eds.): *Turek na obzore*, 167.

¹⁶ SZATLÓCZKI, G.: *Vár a várban*, passim.

Győr, along with two riders.¹⁷ The *kapitány/hadnagy* also commanded his own retinue within his *zászló*; Krusich's boasted 16 men, a somewhat large number. As the nobleman/knight received his monthly payments according to the number of his retinue (to be distributed among them), it is reasonable to assume that Krusich got a considerable sum at each payday. He received his own wages as *kapitány/hadnagy*, and he also disposed over the payments of the members of his retinue.

In the case of the infantry, the *tized* (Hungarian: 'one tenth', a squad) was the basic, lowest organizational level. Each squad was led by a corporal (*tizedes*), referred to in the two documents as *Rottmeisters*. Several of the squads made up a *hadnagy*-ship or *Hauptmannschaft*. Similarly to cavalry, a system of hundreds was the generic principle, but smaller strongholds may have featured a unit of twenty, thirty or fifty footmen. The two muster registers demonstrate that in these cases, one *zászló* did not consist of ten squads. To sum up the evidence of the documents, we can say that the *kapitány/hadnagy/Hauptmann* was the commander of a unit with its own purposes and military goals, regardless of its numbers.

The two muster register also direct our attention to the fact that the units did not always count the predefined numbers. There are examples among Krusich's cavalry that a knight left service and his replacement had only a smaller retinue. In the case of infantry, the squads often did not consist of the originally defined ten troops.

Hussars, knights and trabants

19th and 20th century Hungarian historiography basically equals 'hussar' with the Hungarian cavalryman. Matunák made the following notion about Tamás Pálffy: "as a hussar captain, he was captured by the Turks along with Krusich at the ill-fated battle at Szécsény on 4 April 1562."¹⁸ Contemporary Hungarian documents, however, did make the distinction between the two types of cavalry. Gábor Szentgyörgyi, Orsolya Kanizsai's secretary wrote on 26 October 1566 that

¹⁷ *Régi Magyar Költők Tára. XVII. század. 1. kötet.* Sajtó alá rendezte: Bisztray Gyula, Klaniczay Tibor, Nagy Lajos és Stoll Béla, Budapest, 1959, 541–542.

¹⁸ MATUNÁK, M.: Pálffy Miklós születéshelye, 75.

the emperor gave 1000 Rascian (Serb) hussars and 500 Hungarian knights to assist Ferenc Tahy, the royal chief hadnagy of Kanizsa.¹⁹ In his work *Emlékezzünk eleinkről* ('Remembering our ancestors') Sándor Takács dedicated the chapter 'A huszár, a száguldó és a járgáló' where he not only gave evidence of the Southern Slavic origins of the hussars, but also noted that "in the 16th century [...] the entire Hungarian cavalry was light cavalry, which might imply that all Hungarian cavalymen were referred to as hussars. But this is not the case. The meaning of the term hussar was not yet forgotten and the noble soldiers would not call themselves hussars for anything in the world! Reports and letters of perimeter soldiers are extant by the thousands, and none of these contains the word hussar indeed. It is true that the hereditary provinces and Vienna court offices tended to leave the usage of the terms *renner* and *ringepferd*, referring to the Hungarian riders either just hussars or light cavalry (*levis armaturae*). But then again, they did not warrant Hungarians to be worthy for the word 'knight'. (Which was reserved for Germans only.) However, it is of little consequence to us how Austrians called our cavalry! The main thing is how our soldiers, our men called them."²⁰ Furthermore, the term hussar was considered as pejorative even in the early 17th century.²¹

In other words, Takács attributed the German-language documents' references to the Hungarian cavalry as hussars to the Austrians' unwillingness to "warrant Hungarians to be worthy for the word knight". This is certainly an emotional explanation, but two interrelated factors should also be considered. On the one hand, during king Matthias' campaigns into Lower Austria, the inhabitants (noblemen, citizens and peasants alike) did encounter the pillaging Serbs, and their impressions were unpleasant – they ransacked the country, plundered and torched whatever they found.²² However, Takács also notes that the Hungarian cavalry had also changed in

profound ways: “Thus the constant battling with the Turks forced our men to adapt their tactics to theirs. [...] Our soldiers, in contrast to the Westerners, began to revert to ancient warfare tactics as early as the 15th century, abandoning heavy armor and bulky weapons. They employed either light and movement-enabling armor, or resorted to gambesons.”²³ Though Takáts did truly oversimplify the matter, it seems that the Vienna military offices considered all cavalry that were similar to hussars in combat style, gear and armament, to be hussars. They did not tend to make a distinction, regardless of the cavalry in question being Rascian or Hungarian.

In the 16th century, the vast majority of hussars came from among the Serbs/Rascians. As ordered by the Aulic War Council, even Orthodox priests were paid and employed for them. Nevertheless, it is possible that Hungarians also joined their ranks over time, replacing the numbers lost in battles or otherwise.²⁴ By the beginning of the Long Turkish War (1591–1606), numbers of the “true” hussars must have dwindled significantly. This is why the Aulic War Council enlisted Cossacks when they needed suitable cavalry against the raiding Ottoman *akinji* riders and, later on, against the Tatars.²⁵ At the same time, Rascian mounted troops began to appear in the ranks of the Sublime Porte as *beslia* marauders, both in strongholds and in campaigns.²⁶

While the (Hungarian) ‘hussar’ replaced ‘cavalryman’ as the customary term for cavalry in the Hungarian historiography, ‘hajdú’ came into use to refer to the Hungarian footman. Table 1 demonstrates that the term ‘hajdú’ does not appear in the records of 1576, 1682, or 1594. Instead, they include ‘footman’, ‘Hungarian footman’, or (Hungarian) *trabant*. The latter term merits some explanation. According to the etymological dictionary of the Hungarian language,

²³ TAKÁTS, S.: *Emlékezzünk eleinkről*, 88.

it is a borrowed word from (Upper) German, possibly through Czech. Its origin may be the name of the Belgian province Brabant.²⁷ However, the Grimm's dictionary of German language states that the German *Trabant* may originate from the Czech drabant, entering the German language during the Hussite wars.²⁸ Both dictionaries attribute the same meaning to the word, though: foot soldier, armed guard, escort, or bodyguard. All these show that *trabants* primarily had guarding functions. This is why gatekeepers and footmen protecting towns or provinces were called thus. However, field armies tended to have foot soldiers who did not only protect a given stronghold, but they had active military tasks as well.²⁹ Thus it can be assumed, that all *trabants* were foot soldiers, but not all footmen were *trabants*. Hajdús may have become *trabants*, inasmuch as they were enlisted to defend or guard a certain site. A good example is the 100 hajdús of voivode Péter Szél, taken into service to defend the outer fortifications of Kaposvár in 1555.³⁰

The question arises: what was the role of the field army assigned to the stronghold at Krupina? After the fall of the Nógrád fortifications in 1552 and then the losing of Fiľakovo in 1554, the mining towns that were crucial to the Hungarian Kingdom's economy became defenseless; their protection was to be organized. Thus the cavalry at Krupina had the primary purpose of controlling and defending the surrounding countryside, the county or even several counties: basically the prevention of enemy raids. To achieve this, the cavalry was, of course, assisted by infantry more than once.³¹ A probable contemporary occasion took place at Eger: though unfortunately without date, a document shows that György deák ("learned"),

the prefect at Eger indicated that the county of Gemer [Gömör] made an official proposal to grant payments to Eger for the defense of certain areas. This was also sent to the king, for an approval of the Hungarian Chambers.³²

To conclude, we can say that the two muster registers provide highly valuable insights about the Hungarian army organization and about the Hungarian army in general. The work is not finished, though. Further investigations are needed to understand the entirety of the system, as the above presented is only a part of the 16th century Hungarian military affairs.

Musterregister des Khriegsfolckhs Zu Kherpten, so durch Sennt Peteri Januschen vnd Achazi Zanndecker musterschreiber den lezten decembris des 54 Jars gemusstert worden.

Zhrnutie

Analýza dvoch muštrovacích registrov z Krupiny

Počas regrutovania vojska proti Osmanom vyhotovovali poverení úradníci tzv. muštrovacie registre, menné zoznamy naverbovaných vojakov. Dva takéto registre napísané v nemčine sa zachovali z rokov 1553 a 1554 z Krupiny. Podľa ich originálneho zachovania vo Vojenskom archíve vo Viedni sú uverejnené v plnom znení. Veliteľom posádky bol Ján Kružič, ale súčasťou vojska boli aj ďalší nižší dôstojníci. Zoznamy spísané počas muštrovania v Krupine informujú o desiatkach mien vojakov z radov pechoty (drábi) aj jazdy (husári), ako aj o ich žolde. Mená vojakov naznačujú ich rôzny pôvod a pestré zloženie vojska. Muštrovacie registre okrem toho poukazujú na neuplné zloženie (chýbajúcich mužov) v niektorých oddieloch.
