Supplementary information

Supplementary Fig.1: Density plots of duration of progression from baseline to the first visit when a change in diagnosis was reported. (A) Remained Healthy vs. Healthy-to-MCI. (B) Remained Healthy vs. Healthy-to-Dementia. (C) Remained MCI vs. MCI-to-Dementia.

Supplementary Fig.2: Sensitivity analyses; forest plot of adjusted odds ratios for potential risk factors at baseline, associated with progression to MCI and Dementia. (A) Outcome: Remained Healthy vs. Healthy-to-MCI progression; (B) Remained Healthy vs. Healthy-to-Dementia progression; (C) Outcome: Remained MCI vs. MCI-to-Dementia progression.

Covariates	Number of subjects		Odds Ratio (95% CI)		p value
