CHAPTER I

DISCRIPTION OF THE TO M

CUAPTER I

DISCRIPTICI OF THE TOUR

<u>Ceographical Location</u> -- Fitchburg, located in the valley of the Masima River, is on the ferrous Nohmak Trail, 48 miles west and somewhat north of Roston. Next to Morcester it is the largest city in Morester County. It is pleasantly mituated among hills and valleys, and is about twenty-four miles north of its sister city. The tourship is of average mize, being about six and a half miles from north to south, and about four and a half miles from east to west. A small stream, the north branch of the Mashua River, formed by the confluence of several brooks in the southwesterly part of the tour, curves to the north and e erges near the southeast corner; and along its course most of the population and all the business interests of the city are located.

The thickly populated and business center - the city proper - lies a little southeast of the center of the tomship. West and south of the city proper are the villages of "est Fitchburg, Rockville and Crockerville, and cent and south are Trashville, East Fitchburg and South Fitchburg. The outlying portions of the township are but sparsely inhabited, being winly utilized for farming purposes, though considerable areas are covered with woods or used simply for pasturage. The township is bounded on the north by Ashby, on the east by Lunenburg and Loominster, on the routh by Leoninster and Westminster, and on the west by Westminster and a small port of Ashburnhen.

The City Iteelf -- Fitchburg is pre-eminently a bury and thriving city and for its size it can beart of a great diversity of industries. The little strain running through the term was a source of great annoyance to the early settlers. The spring floods carried may their bridges and the giver was combined a minance and probable bar to the growth of the town. But coming years showed the folly of these fears. Dans were constructed, the unter controlled, and manifesturers on a mull scale began to loaste on the banks of the forwarky detected stream. This was a sessing curve turned into an evident bloosing, for from these few mills have spring the present great manifesturing concerns located here. Now the stream, shether mulles by the floods of spring, or disinished to a more rivulately the drought of summer, is allowed to pursue its way for the ment part unbecked by the bury manufacturer.

There are many planamit drives in and should the city. The subscham reads are, for the ment part, well ands and kept in good condition, though the hilly character of the active surface of the tornship readers very considerable weakouts inevitable during the spring meeths, and causes more or here expensive around repairs. The coll is generally quite fortile, and there are many valuable forms in the term. Woods are abundent in many parts of the term and consist of all variations of treas indigenous to this section. Fruit-trees flourish and there are suny fine orchards is and around ribebburg. Scall fruits and garden produce are related in press showings with extinary care. Although Fitching is out given very much to agricultural purealts, she when a very respectable showing in that line.

<u>Early Mintery</u> -- Fitchburg and originally a part of Lanamburg, and its mintery prior to 1764 is identical with that of Lanamburg, and may be found in the history of that town. Previous to 1764 several attempts had been made by the people living in the westerly part of Lanamburg to be set off as a severable term, but were unmacconstill. In Amounty 25, 1764, mother attempt was mide and the constant of Lanamburg ubtained, the bean woting "to lat the people go." The request was granted on condition that

-3-

"the inhabitants should pay their minister's tax, as hereto ore they had done, until they should be formed into a district." As soon as the consent of Lunenbur was obtained, a committee consisting of John Fitch, Amos Kinball, Samuel Hunt, Ephraim Thitney and Jonathan Wood, was chosen to procure an act of incorporation. So scalously did this conditive work that in just nine days after the granting of the request the act passed the General Court and was signed by the Governor. The history of Fitchburg be an therefore on the 3rd day of February, 1764.¹

Educational Beginning -- The early settlers of this town paid little concern and less money to the fostering of public education. The earliest mention in the town records of any public action respecting the establishment of schools in town occurs in the report of a town-meeting S ptember 12, 1764, and is as follows:

Voted, that there be two scools in s^d town and that mr. John Fitch and Kindal Doutwell and their neighbors shall have the benefit of their scoole money in order to provide scooling among themselves.

Voted, that eight pounds be raised in order to provide a scool-

Voted, Mos Kimball, Toh^{II} Whitney and Thos. Button be a scoole comte.²

(1) Torrey, Mufus C., Mistory of the Team of Fitchburg, Messechusetts, pp. 1-11.

(2) The Old Records of the Torm of Fitchburg, 1764-1759, p. 7.

-4-

The abount of money appropriated was very small, being equivalent to only a trifle over themt -six dollars.

The "two scools" appear to have kept, however, during the winter of 1764-65, - one in Milliam Chadwick's corn-barn, near the present Pearl School-house, and the other in Samel Hunt's tavern, - but who the "scoolmister" was is not stated.

November 21, 1765, it was voted in town-meeting "to have 2 scools in s'd town and Mr. Foole and Mr. John Fitch with their neighbors have the benefit of their scoole money in order to provide among themselves."

Voted, that three pounds be raised for scouling. Thomas Condin, Kindal Doutel and Jonⁿ Wood Com.

So the town had only about ten dollars to expend for education in the winter of 1765-766.

The next fall, however, the people returned to their first appropriation of eight pounds, and voted "that two-thirds be laid out in the middle of the toum, and the rest by the Com. as they shall think proper on the outsides of toum."

During the following years a like sum was annually appropriated, and equitably distributed.

January 11, 1770, the town, for some reason unknown, voted "not to have any scoole this wint r, but reserve their money till next fall."

October 19, 1772 twenty pounds were raised; and it was also voted to build four achoel-house in the term, "each quarter of the term to build their own achoel-house at their own expanse, free from any term tex, only that each quarter have their proportion of the Texm's Boards and Hails left after finishing the Heating-house." A condition of five was chomen to fix the location of the school-houses.

-5-

October 4, 1774, the following votes are recorded, showing that a sharp lookout was maintained with regard to the expenditure of the school money:

Voted, that all the quarters of the town that don't see that their part of the scool money that is not scooled out within the year be returned into the Town Stoke. (This vote is rather blindly recorded, but one can catch the idea.)

Voted, to add what scool money remains not yet laid out that was raised the last year to the twenty pounds now raised to be laid out in providing a scool or scools.³

In 1777 the appropriation was raised to thirty pounds. The effect of the depreciation in the currency is seen in the amounts raised for school purposes during the next three years, which were two hundred pounds in 1778, five hundred pounds in 1779, and two thousand pounds in 1780.

In 1781 the town raised "sixty pounds, hard money, to hire school Master, Masters or Mistresses." The same was raised in 1782, but the appropriation for each of the two following years were reduced to forty pounds.

In 1785 it was voted "to hire a Grammar School Master for the town; the said Grammar School to be kept four months and each quarter to have their month, the said Grammar School to begin in town before December next." The appropriation for this year was forty-five pounds, and remained at that until 1790, when it was increased to fifty pounds.

Early beginnings of public school education in the town of Fitchburg

(3) The Old Records of the Town of Fitchburg, 1764 - 1789, p. 102.

same antreasly measur once. The trend in these first teanty five years of public aducation was one of public indifference plas extreme conservation is matters of school buildings, percensel, and Length of school year.

CHAPTER II

CONTON OR FLEXTMARY SCHOOLS

CHAPTER II

CONTRACT OR ELECTIVITARY SCHOOLS

Districting The Town -- In 1790 the town was districted for school purposes into several parts. Acts of 1789, Chapter 19. Under the state is one committee an was chosen to represent each district and to be under the direction of the district to which he belonged. It was voted to raise fifty pounds to support the several schools and that the "several schools in said town shall be free schools for ye use of the town."

At a later meeting the report of the committee to re-district the town was rejected, and it was not until 1798 that a report on this matter accepted. The town was then divided into eleven districts. The schools were designated as shown in Table I with six of them being built.²

- (1) The old Meeris of the Toum of Fitchburg, Volume II, p. 45.
- (2) Ibid, Voluce IV, pp. 143 152.

In March, 1795, one kindred pounds was saleed for schools. This was the first year that the annual appropriation was voted at the March meeting.

It was necessary to build school-houses for the new districts, and at a town-mosting, June 21, 1798, a committee was appointed "to estimate the bigness of the school-houses." The committee reported at the same mosting, and their report was accepted, - "that the houses be twenty-four feet by twenty feet, and finished with Gallery seats; lathed and plantered overhead, to be glassed with six windows, 12 squares of 7 by 9 glass in each, and to be finished outside and in, all except the elapboarding." The report further provided that the old school-houses be apprecised, and their value refunded to the proprietors, and that the building of the new houses be let out to the lowest bidder. A condition of there was choosen to let out and inspect the building of the new school-houses.

In 1799 one hundred and fifty pounds was raised for schools, and the conditionant were directed "to agree with the teachers that they are not to be allowed enything for beeping schools Saturdays in the alternoon." The selection were sutherized to provide locks and keys and windowshutters for the several school-houses.

In 1800 one hundred and fifty pounds was raised, and in each of the three following years, five hundred dollars. From 1804 to 1808, six hundred dollars use the sum appropriated; and in the latter forty dollars use added "to be distributed among these school districts the selectmen shall think meet need it." A constitute of eleven was also chosen in 1808 to examine schools, and it was voted "that the constitue be requested to attend the schools at their commencement and close, and it be the duty of the school condition to inform the examiners when the school begins." It was also voted that the School Condition furnish the selectmen, during the last-

-10-

week in August, an exact return of the number of scholars in their respective districts, so that the school money could be equitably divided.

In 1809 six hundred and forty dollars was raised "to be laid out as last year," and chose a committee consisting of Rev. Mr. Barton, Rev. Mr. Dascom, Dr. Peter Snow, Leonard Durbank and Joseph Simonds, to inspect the schools.

In 1810 seven hundred dollars was appropriated for schools, and in 1811 six hundred and forty dollars; and in the latter year, a connittee of seven was chosen, "to consider the expediency of any alteration in the Middle School District (District No. I). At an adjourned meeting April 1, 1811, this committee reported "that the district should be divided and a new district formed." This new district, as outlined by the committee, corresponded to that portion afterwards called the "Old City."

The report was accepted, and in the following July it was voted to divide District No. 1, in accordance with the report of the committee, and call the new district No. 12. Also voted to give the new district minety dollars toward building a school-house. This vote was reconsidered, and it was then voted to pay the sum of minety dollars for this purpose in Harch, 1815.

By 1012 the school district boundaries were more accurately defined by a condittee chosen for that purpose. The school appropriation that year was seven hundred dollars.

First Half-Century Of Elecantary Schools -- Herein are the more important actions and trends of the town in regard to public elecantary instruction during its first half-century of existence.

During the early years of this period the town furnished very menero facilities for the education of the collinen; and, as a matter of fact,

-11-

the larger part of the Instruction given in these days was furnished by private teachers.

For the first few years there were no school houses even, the schools being kept in vacant rooms of private houses, or taverns. Fuel was gratuitously supplied by the neighborhood, and the teachers "boarded round." The first school-houses were probably built in 1773, -- one in the middle of the town and the other three in the west, north and south parts of the town respectively.

In 1798 there appear to have been five school-houses in town, according to the appraisal report previously cited, and the frame of a sixth in process of erection.

In 1880 the school-house in the "Center District," or No. 1, stood on what is now Main Street, a few rods west of the present junction of Circle and Main Streets. It was a low, unpainted wooden building, standing with it end to the road. The other ten were in locations probably closely corresponding to those now occupied by our present long-established suburban school-houses.

In 1812, the year after District No. 1 was divided, a brick schoolhouse was built in the new district, No. 12, and still remains there, forming a portion of a dwelling-house at the upper corner of Croscent and Blossom Streets.

In 1815, by vote of the torm, a new school-house was built in District No. 1. It was a wooden building, painted rellow, and containing two rooms. It stood at the present junction of Main and Mechanic Streets, on the site new occupied by D. H. Merriss's house.

The early Schoel Committees seen to have been chosen for predential purposes only, until 1008, when an additional committee of eleven (reduced

-12-

to five the next year) was appointed to examine and impact the schools. After 1826, in accordance with legislative enactment, School Committee ware chosen to exercise sub-tantially the same powers and functions and at present.

Easides the School Committee, which was chosen annually in Town Meeting to look after the district schools, we read in 1804 that there was an Examining Committee also chosen in town meeting. This Examining Committee consisted of the selectmen and elergymen, or of the elergy and others, who were expected to visit the various schools at the beginning and close of the term and examine the pupils. The members of the committee had, however, no actual power until 1826 when this committee began to be called the Inspecting Committee and was given power to examine teachers and accept or reject applicants whose names had been suggested by the School Committee, now called the Prudential Committee.³

In 1828 it was voted that the Prudential Committee be chosen by the School districts. It was the duty of this committee to take care of th school houses, provide fuel for the same, and procure t achers.¹ Wh n the districts failed to appoint a Prudential Committee the duties of such fell upon the committee chosen at town meeting, formerly called the Examining or Inspecting Committee and now called the School Committ.⁵

- (3) The Old Records of the Town of Fitchburg, Volume V, p. 321.
- (4) Ibid, Volume IX, p. 640.
- (5) School Committee Report of Fitchburg, Mas achusett, 146, p. 4.

-13-

This law was passed in 1925, and at an adjourned toun-matting in that year it was voted "that the Selection be a conditive for the superintendence and regulation of schools agreeably to an act of the General Court passed in 1926." Later at the same meeting it was voted to add the clergy en of the town to the committee. The first School Committee actually chosen by the town under this law was in 1927, and consisted of Rev. Calvin Lincoln, hav. Fufus A. Putnen, Dr. Jonas A. Marshell and Messrs. Ebenezer Torrey, David Brigham, Ivers Jenett and Abel Fox.

<u>Second-Half Century of Elementary Schools</u> -- During the second halfcentury of the toum's existence considerable progress was made in educational atters. Fitchburg grew rapidly, and increased accommodations and more teachers were necessary and the people seem to have been willing to appropriate money to meet the increasing needs.

In 1830 the appropriation was eleven hundred dollars, and in 1840 had risen to fifteen hundred dollars.

In 1819 the ciston of emin rating the school-children in to may let

In April, 1831, a condition of one from each school district was chosen "to examine into the evils of our schools and point out remadies." The report of this condition was read June 11, 1831, and "accepted very unanincusly," and it was voted to print and distribute four hundred and fifty copies of it.

In 1835 the number of children attending the district schools in Fitchburg was 560 -- 209 girls and 271 boys -- and the teachers employed membered 25, of whom 14 were ladies. The average wages per month were, in winter, 515.67; in summer it was 14.30.

The district schools had a surser and winter term each term consisting

-11-

of about three months.⁶ The winter term was attanded by sore pupils then the summer term, and had acous "large scholars" when the school committee thought would be better taken care of by mon teachers then woman so that we find mon teachers in demand for the winter term. In the manuar schools there were some very young scholars. In 1845 the committee reported upwards of fifty scholars who were under the age of four years."

In some of the district schools there were several "Departments" conducted. This was so in District No. 1 and 12 in 1845, the first representing the "Centre" of the toum and the other "the old City" what is now the "Opper Common part." The "branches of learning and instruction" as listed in 1845 covered: "Thography (correct spalling), reading, grammar with an exphasis placed on "parsing," composition, writing, geography, arithmetic, recitations with emphasis placed on learning to reply to questions in a neat, precipe and finished form." "Good Behavior" was also listed as well as "Good Herals" as branches in education.⁷

The District System - In the District system each district was as inv unto itself. It chose a predential constituences who had charge of the school property and the selection and employment of the teacher. The dity of the superintending school committee was to examine and certify persons selected as teachers by the spent of the district, to visit school takes a term reporting upon the condition of the verices schools and at times to consider cases of discipline. The length of the term depending on the amount of the appropriation to the district and on the salary of the teacher. If a teacher was employed at a lower salary the school term

(6) Torrey, Bufur G., History of Fitebburg, p. 21.

(7) School Committee Report of Fitchbarg, Massachusette, 1815, pp. 7-24.

-15-

could be lengthened. In the school report of 1847 the senser school wept in one district for 11 weeks, in another for 18 weeks; the winter term was kept in one district for 9 weeks, in another for 11 weeks, and in another for 18 weeks.9

In 1835 an attempt was made to have the higher branches of learning taught in the district schools, but the team refused to senction any such proceeding.

In 1540 the need of a new school-house in District No. 1 because very evident. The "yellow schoolhouse," built in 1815, was filled to everflowing, and the pupile were soon all transferred to a new brick school-house -the pride of the term -- erected on what is now School Street, near Main Street. This house is still standing, and is occupied by schools of the primary grade. During the summer of 1888 an extensive addition was built, reaching nearly to Main Street.

In 1845 the brick house in District No. 12 was abandoned and the pupils transferred to a new and commedicus brick school-house on Day Street.

First Frinted School Reports -- The first printed school report of the town of Fitchburg was for the year ending April 3, 1013. It was not printed by vote of the town, but by the subscriptions of publicspirited citizens, and is an eight-page peophlet in large, heavy type bearing the imprint of "W. J. Merriem, Frinter, Fitchburg, Made."

It contains no tabulated statistics, but deals chiefly with the defects in the school system of that day. Some of the "empess unfavorable

(0) Ibid, 1905, pp. 45 = 49.

-16-

teachers nor faithful committees can obviate" are emmerated as follows:

First. Bed School Houses. -- Under this head it is stated that a few of the school-houses in town are good ones, pleasantly located, in good repair and provided with suitable grounds, etc., while the rost are very bad in all these respects.

Second. Many of our Schools suffer from Inadequate Tuition. The committee recommended as remains for this evil larger appropriations and a reduction in the number of school-districts.

The irregular attendance of pupils is spoken of as a third serious drawback to the prosperity of the schools, and also the non-attendance of "young people between the ages of sixteen and twenty-one," of when there were said to be over two hundred in town, "only eighty of when attend our public schools at all." The report closes with an earnest endortation that parents and guardians exert their utnost influence to have the young persons under their care attend school.

The report for the year onling March, 1845, was printed by vote of the town. It is a pemphlet of twenty-eight pages, closely printed and containing in addition six tables of attendance, i.e. It was prepared by Charles Mason, Esquire, chairman of the School Committee, and is an enhancetive document containing much valuable information regarding the conduct and condition of the schools and useful suggestions in the way of their improvement.

New Districting of Town for Schools -- The year 1045 was a lively one in the school affairs of Fitehburg. At the annual team- meeting, Morch 3, 1015, muskry orticles in the warrant relating to the establishment

-17-

of a town school, new districting, &c. were referred to a committee composed of one chosen from each district.

This committee met March 18th and thoroughly discussed the subject and adjourned to the morning of April 7th, when a report, prepared by the chairman, Mr. Mason, was read in committee and unanimously agreed to. In the afternoon of the same day this report was presented in town-meeting and the measures therein recommended were adopted. Of these measures the following were a part:

"That the present division of the town into school districts be discontinued, such discontinuance to take effect on the 15th day of May next, from and after which day the existing school districts of the town, including No. 12 1/2, shall be abelished; and that the town purchase of the several districts, at a fair and just appraisal, their respective school houses, and their right and interest in the land on which the same stand, and that henceforth the town provide, at the corrent espense of the town, school houses for the several school districts that shall be formed within its limits."

It was the portion of the above relating to school districts that produced contention. No objections were made to the purchase of the school houses by the torm, though it was an unusual proceeding in those days.

At this meeting, April 7th, a committee was chosen to appricate the school houses and report their value to the assessors, to be by them credited to the taxpayers in the several districts toward payment of their taxes. This was attended to and the transfer duly made to the torm.

I committee was also chosen at this meting to divide the town into

-18-

control a report at a tam-menting held May 5, 1045. The report was accepted and referred, together with the whole subject matter, to a special committee for revision.

There resulted from the labors of this committee two reports, -- a majority report -- recommending the division of the town into eight school districts, to be wholly under the supervision of the school Committee; and a -- minority report -- recommending the division of the town into two school districts, each district to have entire control of its own school, and the School Committee to serve only for the purpose of examining teachers and occasionally visiting the schools.

In the mjority report was a table of the school districts as then existing and as shown in Table II.

These two reports were read in town-meeting, March 2, 1846, and were oth accepted and laid on the table. It was then voted "to adopt the trritorial limits for school districts as they existed in 1844, except the half-district." A committee was chosen "to assign the territory which was formerly the half-district, and fix the limits of the old districts." This committee reported April 6, 1846, and their report as accepted. The town clark added to the record the following commut: "So ended our reat effort to new district the town."⁹

In 1845 the School Committee established a small library for the use of the public school teachers. A subscription paper was circulated and the money this obtained was used for the purchase of some forty books and pumphlets on educational subjects. These were afterwards presented

(9) The old Records of the Torm of "itchburg, Volume VII, pp. 49 - 63.

to the Mitchburg Public Library.

The term did not vote to print the school report for the year ending March, 1016, and in April of that year a subscription paper use carried around and 0.23.16 raised for which sum the report was printed the following May.

After 1846 the report was annually printed by vete of the town.

People Thoroughly Annual to Manualian - The people were now thereachly make an the subject of manualian. During the year suling March 1, MSO, ever two themasual dellars was expended for new school houses in nonth Fitchburg and Greekerville and the addition to the Academy building, and about aloves business dollars for painting and repairing the old houses. The semual appropriation had risen to shout four thousand dellars. Comsidering the time this much appropriation was a generous one.

Insting the meet too years much our down townrde bringing the actools into good sorting condition. In the maring of 1/55 the team voted to cotablish three more grammar schools -- one on Day Street, one as West Street and the third in Nert Fitching. These schools were put in operation before the col of April, 1955.

until 1155 there save only the District Schools functioning in preparation for Eigh School and entrance conditations were required for these wishing to continue their education. The minimum age for high school was 12 years of age. 10 In 1855 the three Graness Schools mentioned shows were antablished in and near the conter of the torn to which schools these papels care she would to prepare more thoroughly for High School next. These Granes Schools uses contidered to supremut out 6th, 7th, 6th, and 9th grades of today. 11

In 1953 Lt same voted in bean monthing that the delectron be a committee to carry into affect the less of the Communelth concerning

(10) School Consisten of Fitchierry, Pausadhusette, 1849-1850, pp.

-21-

And turl truants and child not attending school.12 In 1857 the Selection appointed three Truant Officers.13

In the school report 1/49-1850 we read of "itinerant writing teachers" who had class afternoons and evenings and were far more manificently paid for their services than the regular school teachers.¹⁴

In 1856 seven thousand dollars were raised, to be equally divided between the schools of the town.

It was becoming very evident that increased accommodations would soon be necessary, especially for some of the schools; but it was not till 158 the South Street house was enlarged at an expense of nearly two themsand dollars.

In 1859 the Fast Street School-house was built, and also a new house in District No. 11, the two costing about five thousand dollars.

The High Street Grannar School was erected in 1860 at a cost of about twelve thousand dollars. This was a comodicus, well-built, brick-house, with accomoditions for three hundred and sixty scholars; it was hented by furnaces.

The West Fitchburg Grammar School building was also erected in 1860, at a cost of about three thousand, three hundred dollars, and furnished accomodations for eventy-two scholars. Both these houses reflected great or dit on the building committee.

The appropriation for schools in 1860 was seven thousand, four hundred and fifty dollars.

-22-

Another period of achool-tonne billing began in 1057. During that pear the middle Street house was crucked at a cast of specards of thirteen thousant collars.

In 1950 the term appropriated \$15,000 for the support of schools and expended nearly \$100,000 for new buildings and alterations and repairs of old houses.

size in 1050 the Day Street School-house one almost entirely robuilt and considerably colarged, at an exponse of about 530,000.

Although the motter of the team giving up its districts achools and establish common schools in the new districts was brough up at different team meetings, the District School System was not actually stellahed until 1969 when by not of legislature the powers and dation of the Frudential Committees caused and delved upon a general School Committee.¹⁵

The symbols of members of the School Constitute chosen at Town Meeting varied. Senstince there were three; sometimes, five; and at other times seven.16 Until 1857 the consittee was chosen annually. Then in 1858 the system of electing one member for three years was commanded, but this system evidently was not a success for in 1862 the same process was begun and again in 1865.17

The fact that there was a disagreement on the matter of choice of a school condities is evident in as such as it was voted in 1563 that the

-23-

selection be the committee to take care of the schools.¹⁸ In 1866 the "chool Committee when to consist of two to serve three years. In 1867 it was to consist of six, two to be elected each year for three years. In 1870 we again find only two members.¹⁹

Mich was done after 1870 to improve the facilities for the instruction of youth in Fitchburg. In 1871 money was appropriated to include the teaching of singing and mechanical drawing in the schools.²⁰

On March 8, 1872 the torn of Fitchburg became the City of Fitchburg.

<u>Hementary Schools Under City Form of Government</u> -- Early in 1873 In. Ili A. Hubbard was secured to fill the newly-established office of superintendent of schools. He began his duties in April, 1873. We find a description of the school system in the school report for 1873 as follows: "The school system of the city enbraces High, Gremmar, Intermediate, Be endary, Frimary, and Ungraded Schools. The primaries, secondaries, and intermediates include five years of the school course, are kept in the same buildings, and are located in the centers of the circles which fill then with children. The primaries and secondaries must be so located, the schools must be carried to the children, for such children cannot go far to the schools. The gramar schools are located in centers of larger circles embracing several of the s allor ones, and draw their mupply of pupils from the intermediate schools while the High School marked the whole city, and receives the graduates from the gramar

-24-

schools. Will A recommendation and onde at this time that the school system he changed so that only the Primary Schools, Oremar Schools, and the High School make up the system but this recommendation use not carried out until after.

In 1850 there were bouldes the 8 ungraded mobeols, 10 primary schools, 9 momentary schools, 7 intermediate schools and 3 grammar schools the word "school" being used as we use the word "class" today, 22

Pupils were admitted to the grammar schools when they passed enseinstions from the intermediate schools.23 The schools were divided into grades. There were 4 grades in the High School and size grades in the elementary schools.

The general condition of the public elementary schools for the first fifteen years under the city form of government can best be shown by data given in Table III.

The appropriations above given do not include the amounts voted for repairs and new school houses, but simply the appropriations for teachers' unlaries, fuel, care of school houses and rooms, and since incidental ampenses.

The law passed in 1884, requiring cities and terms in this State to furnish school-books to the pupils, assued an avarage increase of \$4500 In the samuel school appropriations for the last four years in the figures for 1985-38 in the above table.24

The latter part of these years were more important perhaps because of the number of new and substantial brick school-houses that had been built. The most important of these were the Hollstone Street House, erected in 1903, one on Meverick Street and mother on Highland Avenue, built in 1985, and the Clarendon Street house, built in 1987. The appropriate cost of the four structures was about 150,000. This does not sound very espendive seconding to present costs but it was expensive enough to the city at that time.

In 1990 the attendance for the elementary school increased considerably because of the Illiterate Minor Act which obliged minors who could not

-26-

read or write the malish language to attend evening school.25

"Ungraded classes" were started in the regular school system of elementary grades in order that the schools might be of service to all residents and not only to those who fitted into the established system.²⁶

The first report of the Director of Manual Arts including drawing and anual training is found within the School Report in 1903.²⁷

After the incorporation of the City in 1872 the duty of appointing Truant Officers fell to the School Committee.²⁸ In 1889 there was one Truant Officer, who visited homes and made arrests for truancy. He made his annual report to the School Committee which report was incorporated ith the School Report in the "City Documents." Beginning in 1914 the n "Truant Officer" was changed to "Attendance Officer" or "Supervisor of Attendance."²⁹

The State law required Medical Inspection of schools in 1906. The School Board took charge by appointing the School Physician. Later, in 1911, the Board of Health assumed this duty.³⁰

-27-

The Turn of the Century -- by the turn of the century most of the sajar elements in public school system of Fitchburg had taken place. Thurbly after the turn of the century mark two new elementary schools more built to take care of the natural growth of the city, districts, and pupil encollment. The following history of the public common or elementary schools operating at the turn of the century, during World War I, and shortly thereafter will present a clear ploture of how far the elementary mystem had progressed before the world shaking and revolutionary even of World War II.

Table IV shows data concerning the history of school buildings elementied as grasses or elementary scheels in use just before the opening of World Mar II. The table will also include date of erection, enlargement, with former name if any and also the source from which the facts were taken. This table is a listing of the schools with the number of grades each as found in "Municipal Register of 1930" within pages 41 to 59.

Beginning in 1930 Mursery Schools were started for children aged three and four.³¹ In 1934 the W.P.A. organized nursery schools with federal funds. The children attending these schools were under supervision from nine c'clock until about 2:30. Dinners were given and a rest period after dinner.³²

In 1936 a petition was presented to the School Committee signed by 341 persons requesting that the city establish Lindergartens. The School Committee acted favorably expressing their intention of establishing a city wide system as soon as necessary funds are available. In 1937 the Committee reported as a major need the establishment of a city wide system of kindergurters.

From 1937 on many major changes took place in the local school system. Changes in administration, buildings, grade system, personnel and others took place but all with a definite trend to and contralization. A full picture of recent trends and changes before and efter World War II will be given in the last chapter of this writing.

CHAPTER III

z

VOCATIONAL SCHOOLING

CAPTER III

VOCATICIAL SCHOLING

The Continuation School -- The first concrete expression of vocational training in the Fitchburg Public Schools manifested itself in the form of a Continuation School which opened its doors for business on September 20, 1720. This was made possible by the Continuation School Law, Chapter 311, General Acts of 1919.

The Continuation School Law required all minors between the ages of fourteen and sixteen years, who regularly were employed for at least six hours a day, to attend the continuation school at the rate of not less than four hours a week; while those temporarily unemployed must attend school at the rate of not less than twenty hours a week. The school must be in session between the hours of 8:00 and 5:00 on working days (meept Saturdays) and must be open the same number of weeks as the high school.

During the first week there were enrolled 174 girls and 198 boys, while a total of 372 pupils. It necessitated no small amount of work on the part of the teachers to round up the stragglers for enrollment. During the school year 119 more boys and 66 more girls entered, while by nore and 40 girls left; leaving an average enrollment of 470 pupils.¹

The purpose of the Continuation School can be made cleaner by the statement of the report of the Special Commission on Education of January 29, 1919.2

"Every year an army of boys and girls of fourteen bid good-bye to the method house which they have been told stands for education, and are going

(1) School Committee Report of Fitchburg, Massachisetts, 1920, pp. 75-79.

(2) Ibid, 1919, p.61.

out into the world equipped for --what? Equipped for nothing? Nost of them must take whetever can be found in the way of a job, and we know that for many of them an opportunity to qualify for something better than the first job common when they take up the task assigned to them. For without special proparation for doing their work in the world they naturally have little choice in determining what that work shall be, and once in the prind of curtain kinds of work there is little chance of their getting bet of the rat."

Much the Titchburg Continuation School first opened in the fall of 1720, a majority of the pupils were working in the cotton mills of the city. This condition continued for three or four years, when the mills began to experience trouble in securing business enough to make the running of the mills profitable, so they ran an abbreviated schedule of three or four days a weak. As a result they were able to hire boys and girls over mixteen years of age, and gradually the boys and girls between fourteen and mixteen years found it more difficult to secure exployment in the mills.

When the cotton mills finally closed or moved out of the city, there were very few boys and girls of Continuation School are employed by them. Many of the mothers of this Continuation School group, when they found that their children were unable to secure employment in the mills, went to work themelves and hept the children at home to do the work there. Therefore when the last cotton mill closed, it was not necessary for this group to make a complete readjustment for they had been doing this gradually over a period of four years.³

The closing of the cotton mills had its affect on the Continuation School in still mother way. In June of 1928 the pervices of two full

(3) Continuation School Report of Fitchburg, Massachusetts, pp. 27-29.

-33-

the teachers and one half time teacher were dispensed with. This necessitated the discontinuing of the cooking classes and the doubling up of the woodworking classes. The rewing classes had been larger this year, but were conducted as in previous years.

The school system had to adjust itself to an economy program, and it was impossible to make any progress; it was harder still to keep it from slipping backward.

In 1930 diplomas were granted to graduates who had completed their full time at the Continuation School.4

Any boy or girl who had not made up his time at the school could not receive a diploma until that time was made up. This had helped to make the attendance of the school the best in its history.

Many of the boys and girls, some of whom were over sixteen years of the been attending school more than the required time, which was proof that their needs were being satisfied.

Effect of Economic Depression -- The economic depression of the 1930's brought about a decided change in the attitude of the pupils in the Continuation School.⁵

Nany of the boys and girls who had been attending school only one day a week began to attend extra days in school while many former pupils who had become sixteen and had left school had asked permission to return on that they could be trained for better positions. The school tried to help this older group.

No group of persons had found itself facing a greater readjustment

- (4) Ibid, 1930, pp. 16-17.
- (5) Ibil, 1931, pp. 22-23.

-34-

because of the 1930's social and economic conditions than the boys and girls in the fourteen to minteen year old class who in nerval times found exployment and left school was the statement made in the Continuation School Report of 1933.

This group of boys and girls was not fitted by inclimation or outlook for the propressive stages of education in our antablished schools. Namy of these children, their parents, and the teachers of the schools in which they were attending realized that the education which they were receiving was not fitting them for the places in life which they soon must occupy.

Name of the above sentioned children couplt edulation to the Continuation School and many of the teachers and parents any the advantages to these pupils of the vocational training received there.

Pupils who presented problems in the established school system often ceased to be problems when they received the vocational training for which they were adapted. These problem children were found in increasing meabers in the minth, seventh, and eight grades and in the first two years of high school. It was folt that the proper education for them would have solved many of the delinquoncy problems of the time.

It was fait at this time that this whole fourteen to sixteen year old group might be better fitted for their proper places in life at me added expense to the city by the organization of state which weetlenel courses, whereby the city would receive fifty per cent of the maintenance cost from the State Department of Education. These courses might be carried on in conjunction with the Continuation School classes, using the equipment of the Continuation School.

-35-

<u>Recimings of General Tocational School</u> -- In 1935 a fire broke out which destroyed the High School building and along with it a great deal of the Continuation School equipment.⁶ Hearly everything that was in the Continuation School office, the girls' department and the boys' department or classrooms was destroyed. The abops were not damaged by fire but everything in them was thoroughly drenched and before the equipment could be removed from the ruins, a great many of the hand tools disappeared.

In Sectember of 1936 a General Vocational School was started in connection with the Continuation School. This school was for boys and girls fourteen years of age and over who had completed the sixth grade and wished vocational training in the sect-skilled occupations.⁷

Thring the ten years from 1937 to 1947 the Fitchburg Vocational School was called upon to furnish instruction for many different groups.⁸

In 1938, the West Toumsend Camp of the C.C.C. requested the school to furnish avoning shop courses. The following year the C.C.C. Camp from Faldwinsville, as well as the West Toursend Camp, was accoundated. In the summer of 1940, the first National Defense Training classes were started. In 1943 and 1944, courses in Notail Selling were connected for the Mercantile Affairs Counittee of the Fitchburg Chamber of Connerce. In October of 1945, un-theJob-Training for ex-service non was insugurated in sixteen cities and tours in Control Manachumetts and in the full of 1916, Apprentice Training was started for ex-service men.

(6) Continuation School Report of Fitchburg, Massachusetts, pp. 20-21.

(7) Int. 1936, m. 45-46.

(B) 161d, 1947, pp. 42-46.

-35-

<u>In-The-Job-Training</u> -- The On-the-Job-Training program functioned notively during its existence. New places of employment had to be inspected and applications for training and training outlines had to be prepared. At intervals of four months, each training program had to be imported to see that the training requirements were being fulfilled; that the trainee was getting the proper training; that satisfactory records of his progress were being kept and that he was getting his increases in pay when they were due.

In the year 1946, the first Apprentice Training course for exservice on was started for Apprentice Machinists. The year 1947 saw a very urgent need for apprentice courses in machine shop, plumbing, steamfitting, carpentry and electrical work which were operating while courses for ento-achinics, founity-man, patternachers, cabinetmakers, printers, brick asons, plasterers, and toolmakers were not yet available. Som of these groups were so have that it was necessary to divide them into two, three or more classes. This program was financed by the V turnes' Administration through the State Department of Education to the local School Department. These agencies, plus the Apprentice Division of the State Department. These agencies, plus the Apprentice Division of the State Department of Labor and Industry, in addition to the local Joint Apprentice Committee (consisting of ambers of both union and exployer prove) were interested in the supervision and operation of these courses. It appeared to be the largest and most difficult assignment that had over been requested of the Vecational School.

Value of Vocational School Recognized - A higher grade pupil admitted in September, 1947, permitted the teachers to do work which record more like real vocational work.⁹ The authorities had stated

(9) School Committee Report of Fitchburg, Massachusette, 1947, pp. 12-46.

-37-

very clearly that "such schools and cleases are to be established and maintained for the avoid purpose of giving thereach vecational instruction to healthy, namel individuals--to the and that they be prepared for profitable and efficient employment." This instruction could not be given when low grade pupile were admitted. In the words of one of the beachers, "It would be difficult to over-estimate the valuable contribution our vecational girls' department is making to the better health, better living and better homosting in the city. This contribution increases as the girls become sives and methers and have the care of beaus. Inough of the bread being cast upon the unters is roturning to give an encouraging conviction of the great value of the work being done. This fact strengthene our determination to uphold the high standard of cur school."

-38-

Many people believed that Vocational Education was something new in the field of education, but it is much older than our country.¹⁰ In 1642, a law was passed by the General Court of Maceachiestic, providing that all parents should have their children taught how to read, as well as how to ply a trade. Parents who failed to much this requirement were to be fined and the children of such parents as could not comply with the law were to be apprenticed to asters who would teach them a trade. This measure was based on the Stalish Poor-Law of 1601 which required that all indigent children be taught a trade.

The Massachupotts law went Durther than its inglish prototype in that it ands none formal and trade education compulsory to all children, whereas the English law only required the teaching of a trade to poor children.

(10) Ibia, 1949, pp. 36-40.

In neptonber of 1947, the enrollment inall departments of the Voortional School aboved a surfact increase. The beys' vocational high achool group sade the greatest gain, in fast, the aleneas because so large that the facilities they had were thrufficient to accommodate all who wished to enroll. In early October of the year 1949 it becaus necessary to turn any pupils who wished to enter this department.

<u>Vecational Rich School Department</u> -- The vocational high esheel department had its humble origin in 1952 when a group of 33 juniors and seniors were annolled in so-called "pre-induction" classes. For several passe, it continued to grow, in spite of the widespread misconception of the general public that such a program use offered for the benefit of "slow" students, an unfortunate misunderstanding which use shared even by com professional adacators. The pre-induction training naturally evolved into the present four pass program.

The fact that the successful student in this department must contine average academic shility with a high degree of musual destarity, in order to develop preficiency in the vocation, gradually but steadily permented the thinking of the high school student and his faculty advisor. This understanding, together with the extenses obtained by vocational students in many exten-curvicular activities, as well as in schelaotic stability had resulted in such an influe of pupils to this department that the capacity to absorb them ind been growthy tened. In June of 19h) one of the seniors in this group won the covetous academic prime for associatence known as the pold "F" and envelled the following year as a student at the local Shote Yeathers College.

In spite of the fact they the vocational department was becalling wary popular with the pupils and that they could not accompdate all who

-39-

would have liked to enter in it, a continual revising of teaching outlines and courses of study book place so that the graduates of this department would be better sublified to take their place in the world when they finished school. CHAPTER IV

SVELIEVG SCHOL

CLAPER IV

WENTED SCHOOL

Forly Conditions of Clauses - The growth of the evening school was a feature of the moter that attracted attention. The projudice against these schools that existed in 1875 had not entirely disappeared by 1900. School officials had been compelled to defend this feature of the system, ar even to apologize for it. The cause for such a state of feeling in the public mind are not difficult to trace since many still recollected the disorderly and turbulent evening school of thirty years previous.

Evening schools sere established at first as private charities. Later, a city or a town made a small appropriation for such a purpose. A school was or anised in a basement, or in some unoccupied part of a building, and oromed to any and all who might choose to attend.

The room light have been ero ded for a few evenings, and not unfrequently a number of those in attendance were there not for the purpose of studying.

Evening schools were started in Fitchburg under more favorable conditions than existed in many places, although a lack of interest in general was meninest.1

The report for 1074 said:

The evening school, for those whose age or occupation keeps than from the day school and who in their younger years were deprivel of school advantance, has been largely attended by more people than its most ensmest friends had dared to hope for. A small appropriation, 1300, was made by the city council, and the school was opened early in December. A hall in the American Scame was secured, and the school was hopt four evenings

(1) School Committee of Fitchburg, Massuchusette, 1399, pp. 36-37.

a week for about two months, and was attended by one hundred and fortyfive pupils. Of these one hundred were males, forty-five females, and their open varied from fourteen to twenty-five years. The average attendance was minety-three. The attainments of the pupils differed widely. Some could not read, while others had been nearly through the grammar schools. Nost, however, had studied arithmetic a little, and needed instruction in the 'fundamental rules' and in fractions. They wished also to learn to write but as there were about twice as many as could be seated at once at tables convenient for writing, the school was divided into two sections and two lessons given the same evening, one succeeding the other. The writing was in charge of Mr. Whitney, the teacher of permanship in the day schools."

More Lacting Conditions - By 1900 the conditions calling for evening chools were much more exacting than those in 1874. Additional subjects were taught at the chools in 1900.

In the school report of 1902 it was reported that since the opening of the evening schools in October 1, 260 certificates had been issued to minors over fourteen years of age able to read and write in Inglish. The truant officer in his inspection of manufacturing establishments had found upwards of three hundred unable to comply with these conditions. It was safe to assume that a rigid inforcement of the law would compel the school board to provide instruction in evening classes for at least five hundred.

A report from the various evening schools in 1908 showed that the evening school had becaus an important feature of the school system. It showed that three hundred and ten students between the ages of 16 and 21 had been registered at this time. Two hundred and twenty-five of

-43-

Usin mumber were classed as "illiterates" - being unable to read and write in Inglish in any manner - while several of the others had a very limited incolledge of the language.2

Minors of this age, unable to read and write in English, could not be employed unless they were regular attendants upon an evening school was the reading of the law at this time. In 1908 one hundred and seventyfour were registered who were over 21. Many of them were unable to read and write in English, but as the law did not apply to them no returns were made regarding their ability or lack of ability in this direction.

<u>High School Program</u> -- For several years the evening schools had traced elementary education and Americanization classes. By 1925 a wellwelling high school program leading to diploma credit had been offered and the response on the part of the young people of the community was reported very satisfactory with the attendance and interest being well mintained.³

A complete four-year Connercial Course in the Evening High School was being offered. In addition to Stenography, Type riting, Bookkeeping, Arithmatic and English, students were also able to pursue the study of Accounting, Machine Calculation and Economics.

<u>Americanization Novement</u> -- The Americanization movement in the city of Fitchburg had its beginning in October, 1923 when reforms were effected through a keener oppreciation of the aims and purposes of the evening schools on the part of the School Cormittee and a greater readiness was evidenced to scalet the avening schools by progressive legislation and increased

- (2) School Committee of Fitchburg, Massachusetts, 1908, p. 16.
- (3) Toid, 1925, p. 14.

-lili-

possible contribution to the welfare of the community.

A survey was made in 1926 which revealed that there were almost fifteen hundred parents of grammar school children who could neither mead or speek English and hundreds were gifted with only a meagre knowledge of the English language. Imagine the difficulty of a boy going to school to learn English and then returning to his mother or father finding that he was unable to use the English he learned in school:

In the ivening School classes were held in the following subjects:⁴ Bookkeeping, Stenography, Typewriting, English, Spanish, Mathematics and there was a special course for prospective nurses. For aliens there were live classes in Americanization and one class for illiterate minors.

The Americanization Department during the year 1931 afforded an educational opportunity to 375 foreign-born men and women who sought the common coll of American citizenship. Tifteen nationalities were represented in the tranty classes that were organized by the department.

In the enrollment in the Americanization classes in this year of 1931 which addit nursally have been expected to follow the increased feas and more rigid requirements for naturalization then in effect.⁵ The most important single factor had been the economic urge toward citizanship. The 1931 crisis of unucloament stimulated many citizens to seek such jobs an rough day labor with the result that many alien vorkers had been discharged. The alien laborer, thus throws out of work had been mainly

(4) Ibid, 1928, p. 29.

(5) School Constitute Separt of Fitchburg, Massachusetts, 1931, pp. 23-25.

-15-

toward citizenship were fruitless until they had attended Americanization classes and could qualify elucationally for citizenship. The case of a Pitchberg resident who was to covarily employed in South-Deerfield, Manacchastis and the returned three evenings every week to attend the evening classes then ade an early morning start at 3:30 A.M. the following forming to return to his work at Deerfield was just one example of the almost heroic sacrifices that many adult pupils made. These same man had toiled in the ditches and on readways doing heavy fork during the day. This was more than a preparation for naturalization.

During this same year a course in Problem and Procedures in Adult Alien Education was conducted in the city by Hiss Mary L. Guyton who was the State Eupervisor of Adult Alien Education. Thirty-three teachers were enrolled. Upon satisfactory completion of the course state certificates were availed which and them eligible for Americanization teaching.

Morld Mar II Work - The Fitchburg Adult Education Department had 704 anult foreign-born evening students enrolled in classes in English and preparation for citizenship during the school year 1939-1940.⁶ In adultion to this number, over 150 students were enrolled in the typewriting and stenography course offered at the High School.

In the program of adult education classes in typewriting, stenoprephy, bookkeeping, sewing and handieraft were offered in addition to classes for foreign-born adults.

With the doclaration of var early in December, and the resulting

(6) School Committee Report of Fitchburg, Massachusetts, 1940, pp. 10-12.

-46-

restriction placed on "Energy Aliens" the Department of Adult Education was of active in reminding Italian and Cernan subjects of the restrictions which they must obey and advised them of the procedure necessary to obtain points for travel.⁷ The term "Energy Alien" had unfortunately attached a stigma of both a social and political nature on the subjects of countries with which the United States was at war. Most of these people were loyal Americans at heart and had given their sons to the service of America. Pecause of the application of the term "Energy Alien" teachers were faced with the problem of keeping up the morale and hopes of these people and make them feel that they still had a place in the comunity life.

Post War Problems - The year 1946 presented a rapidly changing pleture of the kinds of service and opportunities the Adult Education Department found a need to provide.⁸

The first class of non-English speaking adults to be held over a period of years was ergenized at the High School Education Center in the year 1946 and included in its enrollment GI brides, repatriates, and other persons who had come to relatives with the idea of establishing their persons who had come to relatives with the idea of establishing their persons the had come to relatives with the idea of establishing their persons the had come to relatives with the idea of establishing their persons the had come to relatives with the idea of establishing their persons the had come to relative with the idea of establishing their persons to had come to relative with the idea of establishing their persons to had come to relative with the idea of establishing their persons to had come to relative with the idea of establishing their persons to had come to relative with the idea of establishing their persons to had come to relative with the idea of establishing their persons to had come arrival of independent to the second of this new beginning a continuous arrival of independent of Justice supplied a list of name of new errivals and their destined Fitchburg addresses. These new errivals were interviewed personally by the Director of Justice Independent

(7) Ibid, 1941, m. 30-32.

(8) Inid, 1946, pp. 55-57.

-47-

and were offered aid in their main problems. The first major problem of these immigrants was learning the English language for functioning citizenship and naturalization and the second was the need in assistance for making the necessary social adjustments.

An increased interest in adult education classes was evidenced during the post-war years and the courses offered to adults in 1949 were certainly a proof of this.⁹ A total of 900 students enrolled for classes in the fall of 1949. The following courses were available to them for study:

En lish - Preparation for Citizenship - Typewriting - Stenography -Bookboeping - Conversational French - Conversational Spanish - Leathercraft - Stencilling and Elock Printing - Jewelry Making - Ynitting -Sowing - The Perfect Hostess - Public Speaking - Personality Improvement -Oil Burners - Civil Service Preparation for Firemen's Examination - Civil Service Preparation for Policemen's Examination - Writing for Publication and Profit - Labor Relations - Home and Family Living - Music Appreciation -Care and Repair of Home Electrical Appliances

Some of these courses, while organized by the Adult Education Department, were provided by the Division of University Extension of the Hammachasetts Department of Education and therefore provided an excellent mult learning opportunity mithout any direct cost to our local budget. The Philosophy and Music Appreciation courses were offered in co-operation with the local public library and the course in Philosophy alone attracted an enrollment of 125 persons.

-1.8-

Fitchburg's Idult Education Program was one of the 100 mentioned in a booklet entitled "100 Evening Schools" which was published by the United States Federal Security Agency during 1948. This agency conducted a survey of 100 leading city programs throughout the United States and it was a source of satisfaction and pride to have the department in Fitchburg singled out mong the 100 leaders in the nation.

-49-

<u>CHAPTER V</u> SECONDARY EDUCATION IN

JUNIOR HIGH SCHOOL

CIAPTER V

SECODARY EDUCATION IN JUNIOR HIGH SCHOOL

The Junior High School - The Junior High School as an area of education and teaching in the city of Fitchburg had its first expresnion in the manual arts' school. In 1910 the State of Massachusetts had, at an expanse of 92,500, erected and equipped in Fitchburg a Manual Arts' school for the purpose of giving the boys and girls of the seventh and eighth grades a more practical education and for training teachers so that they may be able to take this more practical education to other achools.¹

The building, convenient and well lighted, consisted of two floors, a base and an attic. On the basement floor were the domestic apartents, including kitchen, pantry, laundry, and dining room along with the ork shop and the stock room. Bearly half of the first floor was occupied by an assembly hall, which was intended for social and cultural purposes such as musicals and pageants or loctures. The rest of this floor is occupied by rooms devoted to the several departments of typewritin, seving, mechanical drawin and general repairs. Recitation rooms occupied the second floor and the attic is finished and equipted for printing, bookbinding and general work shops.

This was the first school to provide a differentiated course of study for grades below the high school.

The Ground Junior High School with its score of classrooms, its fine commutation and auditorium, its suites of rooms for household and manual arts, its draming rooms, library and spacious rooms, opened for the first

(1) Echool Committee Report of Fitchburg, Massachmaatts, 1910, pp. 35-35.

the in September, 1924.2

The Junior High School began making a sincere and intelligent attempt to reduce the number of minfits in life, by fitting the work to the pupil and not the pupil to the work. It began to hold more boys and girls in school while it provided men as well as women teachers for these boys and girls from twolve to sixteen years of age.

The cost would have been prohibitive if the attempt were made to provide in each grammar school these broader facilities. Such facilities were provided in this central school accessible for upper grade children.

The winter schedule began its session at 8:50 A.M. and closed at 2:30 P.M. while the spring and fall schedule began at 8:20 A.M. and closed at 2:00 P.M. providing about five hours net in length. A relaxation period of twelve minutes was given at 10:25 A.M., a lunch period of twenty-five minutes at 11:20 A.M. or 12 noon, and a five minute recess at 1:45 P.M. just before the close of school for the day.

The difficulty that first presented itself upon the organization of a junior high school which was to be developed out of the existing seventh and eighth grades and the freshmen class of the senior high school was concerned with the character and unity of the teaching staff. The grammar and high school instructors had had quite dissimilar professional training and employed equally varying withods of teaching. The difficulty was not and eventually disposed of along with the problem of an equitable malary conclus.3

- (3) Ibid, 1923, p. 11.

-52-

<u>Encellent Trend</u> -- The annual report for 1937 stated that enrollmont in the elementary grades of the country had fallen off by 1,000,000 pupils since 1930. For the sixth successive year, as was noted in previcus Annual Reports, the enrollment in the 7th and 8th grades of the junior high school had followed the trend throughout the country as a whole and had decreased slightly from the previous year.

Even with the establishment of an ungraded class in the school for the first time since its inception in 1924 the total school enrollment was elightly below that of the previous year.

The trend towards decreased enrollment was particularly interesting at this time since predictions by secondary school administrators in recent years had been that there would be a constantly increasing enrollment in the secondary schools for many years to come and thereby nec suitating correspondingly expanding programs of building, purchase of equipeent and an increase of personnel.

Table V shows the enrollment figures covering the years 1933 through 1937 inclusive. The figures are those of the annual September registration.

Table VI shows the number of pupils promoted fully and conditionally lon with those not promoted from 1933-1937.

Pupils in the seventh and eight grades were not fully promoted unless they were passing in the four major subjects; English, Arithmetic, Geography and History. If failing in one of these major subjects they were promoted conditionally.

winth grade supils were "fully premoted" upon the satisfactory

that the unidance program had been designed. It aimed to give him the utmost help in solving the baffling problems of choosing and siming at objectives which were almost certain to influence his entire future.

The muidance plan was intended to help him make the wisest decisions he could -- ethical, educational and vocational -- for his greatest selfrealization. To this end they had organized a three-point program reaching every pupil and utilizing every teacher.

For the seventh-grade pupils -- younger, more restless -- orientation periods (one period each week) were conducted by the home room teachers. These pupils had to be helped in their transition from a more sheltered elementary school environment to the larger, more bewildering junior high school. The teachers keyed the orientation activities to reach the interests of their individual groups, and used such devices as story hours, athletic anecdotes, personal experiences, etc.

Through these activities innature pupils were helped to obtain an understanding about their school, the courses of study, their responsibilities toward each other, their manners and conduct in assembly, cafeteria, halls, locker rooms, playground, and the school world in general.

Every Lighth grade group met in similar fashion with its home room teacher and in class discussions the pupils were made ready for promotion to the ninth grade. The purposes of exploratory courses were explained and the requirements for the successful carrying on of the work in each of the three ninth grade courses were investigated.

Probably the most important phase of the program was educational ruidance. Several "ruidance" mombhlies for ninth grade pupils were held during a year, at which the members of the faculty would present a very careful exposition of high school courses, vocational and trade

-56-

wchool courses and college entrance requirements.

These roup conferences were supplemented by individual counseling by home room teachers at essigned periods. Before and after school hours some of the most effective counseling was accomplished because it was then that the pupils themselves in considerable numbers sought out their teachers.

A marber of student club activities were encouraged in the school which helped to develop the midance aims. The matter of guidance received considerable attention at the bi-monthly faculty meetings during the year.

Guidance sterial and aids available to teachers in their home rooms and in the school library included the following books and publications: "Our Junior High School," "Our World of Work," "Guidance for Youth," "Planning a Career," "Vocations," "Planning Your Life for School and Society," "Living with Others," "Principles of Guidance," "Occupational Civics," "What Makes the Wheels to Round," "Men at Work," "Vocational and Moral Guidance," "World We Live In," "Careers Ahead," "Discovering My Job," "Electrical Occupations for Boys," "Youth at the Wheel," "School and Life," "A Girl Grows Up," "Safe Conduct," "Home Room Guidance," "How to Find the Right Vocation," "The Promise of Tommorrow," "Vocational Trends," "Guidance Charts" and Vocational Guidance Pamphlets of the Science Research Associates.

statement of Junior High School Objectives was made in 1940 by the teachers and the principal as a result of group conferences, faculty matings and courses in professional advancement. At the end of the year members of the faculty reviewed their efforts to attain the stated objectives and they sernestly felt that their efforts had not with a large

(6) Concittee Report of Fitchburg, Massachusetts, 1940.

-57-

They cannot do out the work of the year in the belief that they should atrive at all times for the growth of the pupils ethically, mentally, and physically. Accordingly they had endeavored to help the pupils set their ideals and their standards of social conduct upon their own reasoning rather than upon external control. They worked to provide many opportunities and situations throu hout the school in which the pupils might develop helits of cooperation, of initiative and of independence. In guiding the pupils through those situations they tried to aid then to build in themselves attitudes of self-help, of ability to lead and of willingness to follow. They strived to guard the pupil's health while endeavoring to make obedience to good health habits appealing and automatic in them.

In all class room situations the teachers tried to maintain friendly and helpful relations with the pupils to the end that they might aid them in overcoming the self-consciousness of adolescence. Through such means they believed that they could best hope to send out from the schools boys and girls who were well on their way to a realization, an understanding and an appreciation of the finer aspects of democratic living.

This was the main objective of the united efforts of these teachers. <u>Junior High School Program</u> - In January of 1943 the ninth grade at the junior high school was transferred to the senior high school and the seventh and eighth grades of the city were centralized in the junior high school beginning with the opening of school in September of the same year.⁷

The teaching staff had been built up to provide for trenty-three

(7) Ibid, 1943, p. 29-33.

-58-

class room teachers. Their teaching schedules were arranged so that each teacher carried the following load:

Non room supervision - - - - - - - - - - - - - - - - 2 periods Study group supervision - - - - - - - - - - - - - 2 periods Class room teaching - - - - - - - - - - - - - - 32 periods Free time - - - - - - - - - - - - - - - 3 periods Club supervision - - - - - - - - - - - - - - - 1 period Total Weakly Periods - - - - - - - - - - - - 40

As can be seen from the above every teacher carried a very full schedule. The number of pupils in each class averaged thirty-four.

At the opening of school in September of 1946 a new school program was introduced and worked out very successfully.⁸ Although the school day was of the same length as it had been in the past it was divided into in periods of fifty minutes each instead of the former seven periods of forty-three minutes each. Under the new program pupils had a fewer number of free study periods than they had formerly. They studied more purposefully and off ctively under the direct supervision of each of their subject teachers.

The first part of the period was devoted to recitation, class discussion and the direction of learning by the teacher. Then the assignment of the following lesson was made and all the pupils spent the latter part of the period in the preparation of the next assignment. In this way they new completed the most difficult parts of their work during school hours under the direction of the teacher who was available for individual help

(0) Ibid, 1946, pp. 41-49.

-59-

where it whe necessary.

While a certain amount of horework was still necessary the teachers felt that under the new program pupils prepared their next lesson assignments are effectively and with a lesser amount of outside preparation than formerly. For the first time in the history of the junior high school each teacher of English gave instructions in all phases of English literature, grammar, pelling, and composition. Each pupil received all of his instructions in these related fields from but one teacher. Pupils ware given two separate marks in English on their report cards -- one in spelling and the other in English. The latter was a comprehensive mark covering literature, grammar, and composition.

-60-

Released Time And Audio-Visual Aids -- The imputus for released time for religious instructions began in 1947.9 Thirty-five pupils in the school ware curolled under the Released Time for Religious Instruction Classes which were held once a week during school time in the Salvatien Army building. In the process of character training the schools were new adding this training and therefore showing their cognizance of the importance of religious of a place for religious instruction in education rested on the sound philosophy that the "thole child" should be educated.

The development of Audio-Visual Aids as an educational factor had become apparent in recent years and the number of schools in which departments of adio-visual education had been set up was rapidly increasing.

(9) School Committee Report of Fitchburg, Messechusette, 1947, Fp. 35-41. The faculty conditions had studied the possibilities using the present equipment as a basis and they drew up recommendations for improvement of the svailable equipment on hand. The recommendations also included the training of teachers in the use of the equipment and the best educational methods to be followed while using these various audio-visual sids.

In 1947 the School Committee voted for the adoption of a 6-3-3 plan of method organization. So, in 1948 the B. F. Brown Junior High School had rades 7, 8, and 9. The enrollment was approximately 700 pupils and for the first time it housed all the public school children of these three grades encepting the pupils attending the State Teachers College Junior High School. The junior high school was now recognized without a doubt as a menantic and distinct entity in the city public school system.

-61-

CHAPTER VI

SECONDARY IDUCATION

III

HIGH SCH OL

CHAPTER VI

SUCCEDARY MUCATION IN HIGH SCHOOL

Tarly Be innings -- The Fitchburg High chool dates from the spring of 1819, but as early as 1830 a private school with similar dime had been natelliched in the city. It as mintained by one teacher or another through each of the electron intervening years. To afford a personnt how for a school and quite probably to attract suitable teachers to the torn, a "High School Association" was formed, by which a building called the Academy was ere ted in 1 30. It as built at an e. pence of 1200 upon land onated by Incharian Sheldon. The site was a part of the present High Grounds but the building stood a little in front of the present edifice. It contained two room below and one above. The school held within its Tills uss to be at first the litch or High School, in 1833 the litchturg caller, in 1837 scain the Titchurg High School, and subsequently until 1049 the Fitchburg / cademy. In the years 1835-36 and 7, and again in 1841 schools of the same general character were kept in the "Irick Chapel" on Rollstone street, and in 18/2-3 in the school building on the corner of We t Main and School street.1

In these schools the number of statents varied greatly. One of the early teachers spoke of a predecasior of his as having only eight and mother as having but one statent. The avarage for the first six years was 35. The range of study was quite wide, running from the common inglish branches through the higher inglish, Mathematics, French, Letin, Greek, and Hebrey. Tuition ran from 13 to 17 per term of about sloven

(1) Huling, May G., The Tenchers and Graduates of the Fitchburg High School, 1819-1883, pp. 157-161. balf were known to have been college graduates.

In their report a regret that so few of the young people from 16 to 21 were connected with the public schools. Again, in 1847, they alluded to the matter thus: "We are not informed that the town has ever afforded an opportunity to young men or young women to obtain an education at the public expense, sufficient to enable them to keep a common school." In 1846 the Committee directly and strongly urged the establishment of a high school. "One great object to be obtained," they averred, "is facility for educating teachers for our common schools." The town subsequently voted to establish such a school as soon as suitable teachers could be obtained. In preparation for this the Academy building was purchased and a room in the second story fitted up. Within enother year three more rooms were added. In march of 1849 the first appropriation was made for the support of the High School.

At the outset the school was overwhelmed with applicants for admistion which fact occasioned the establishment of a somewhat high standard for entrance; 59 were admitted and by the end of the first year 52 were in attendance. The first set of regulations are of special interest. The "principal Instructor" must be one who had been educated at some respectable college. No scholar could continue in the school more than five years. A thorough knowledge of Spelling, Reading, Writing, Inglish Dreamer, Nodern Geography and Arithmetic were indispensable for admission. The course of study embraced a review of all these: Latin Grammer, Course of study embraced a review of all these: Latin Grammer,

-54-

Algebra and Decentry; English Grammar, Ancient Geography; History, Rhetoric; Natural Philosophy; Chemistry; and Physiology; Declamations and Compositions for male pupils, Compositions for females. There were 44 weeks of school and eight of vacation in the year.

In 1859 the High School was removed to the High Street Grammar School building, where it continued to be held for ten years. In 1869 a connodious and well arranged edifice was erected at an expense of about 60,000. The old Academy building was removed to make room for it.

At the annual town meeting in March 1850 it was voted to establish a "second department of the High School;" the school thus provided for reserbled a high school only in two respects. One was that admission depended somewhat on age and the second that it was under the charge of the School Committee instead of the Prudential Committee of a district. It never did the work of a high school but it was the germ of our present grammar school system. In April 1855 the town voted to abolish it and "to establish three schools of about the same grade denominated Grammar Schools." The attendance in this second department was at first 26, once rose to 71 and it averaged 52 for the first five years.

The Fitchbur High School had a nominal existence prior to 1869. In that year a substantial new building was created and occupied. A proper course of study was adopted and the real work of a high school inaugurated.

The New High School - The need for additional rooms for the old original high school became evident several years before. A high school building designed to furnish accompositions for 250 pupils was erected in 1969. The school was kept in this building until the close of the

-65-

conner term of June of 1895. The average membership of the school in 1870 was 73. The membership in 1874, the year next succeeding the incorporation of Fitchburg as a city, was 119. The annual increase was constant. The average umbership reported in 1890 was 246, the largest number in attendance at one time during the year was 290.²

The subject of additional rooms was considered at various meetings of the school condities during the years 1890 and 1891 but no definite action was taken until 1892. At a meeting held February 12th of that year the board voted to ask the city council to remodel and enlarge the high school building in accordance with plans for the enlargement submitted in detail by the condities on school houses. The City council demed it incordent to grant the request of the school board for the remodeling of the old building and accordingly the school board at a meeting held March 7, 1892 took action upon a report from the condities on school houses with reference to a new building. This condities stated that the action of the city council must be considered as a desire on the part of the council for a new building. The school board thereupon voted to ask the city council to purchase a lot and to erect thereon a high school building.

The recommendations of the joint special committee ware adopted and the myor was authorized to complete the purchase of the land and buildings.

The school committee at a meeting held March 6, 1392 voted to accept the plans presented by the committee on school houses and to request the crection by the city council of a building substantially in accordance with said plans.

(2) School Committee Report of Fitchburg, Massachusetts, 1595, pp. 90-92.

-66-

The city council subsequently anthonized the cormittee on city property to develop the plans and to erect a building in accordance therewith. This condities had the entire charge of the work until the completion of the building. Work was begun upon the foundation in December, 1893 and the building was delivered to the school committee September 2, 1895.

Intrance Require ents -- Pupils were admitted to the high school upon the results of one examination. In accordance with the regulations of the school board of the city that examinations occurred in July during the week next succeeding the closing of the summer term.³

In 1876 a change was made, and pupils were admitted to the high school in Fitchburg upon recommendation of the teachers under whose charge the classes had been for at least a year. It was a radical departure from a strongly intrenched custom.

Attendance Trend - The average daily attendance at the high school in 1875 was 137 while in October of 1899 it was 522. The increase in population was not responsible for the increase in membership at the high school.⁴ The constituency from which the pupilage of the high school was drawn had not increased to a great extent during those 25 years.

Conside together with several countries of continental Europe had contributed materially to the population of the city during this quarter of a contury. / very meager representation from this class of the population was found in the high school.

- (3) Ib d, 1 99, p. 29.
- (4) Ibid, 1999, pp. 19-20.

-57-

The marked increase in attendance my be explained or traced to reveral causes. The free text book law passed in 188h was underbiedly the mest potent factor of all. Also, the charge of the curriculum of stations had produced a marked effect. The introduction into the higher product of standardshy, typewriting, should training, nature study and other subjects had a marked influence upon the attendance at these grades. The opportunity afforded for a more extended course in the sciences had ancouraged continued attendance upon the part of many who had no denire to fit for college or to study many of the branches required in the charmical course.

The effect of the enactment of stringent attendance lass as noticeable. While these enactments seemed to effect those who might never pass to the higher grades, the influence was felt, more or less directly, upon the classes of older pupils. Another factor was the deeper and more intense interest that many parents evinced in the higher education of their children and the increased determination upon the part of these parents that their children should enjoy the benefits of these schools. Children were formally withdrawn upon the ground that the studies of these predents are not practical, but in many respects there took place a decided change in this mapset, a revolution in public opinion, it may well have teen called.

<u>Changes At Turn of the Century</u> - In 1904 four main courses of study mere being offered at the high school. They were the College Preparatory, Technology Preparatory, Namual Training and General. The first three courses prepared the careful students for colleges, technical or testile schools. The last course was taken by pupils preparing for the Normal Schools or a basiness life, or by those desiring a general culture course.

-68-

The most important charges and events from the years 1903 through to 1910 at the Fitchburg High School were the following:

-39-

In 1903 wheel prize speaking began and also the first issue of the school paper the "RID and GRAY" which was a carefully edited and prepared paper. The School Song was adopted in 190h, and also the Constitution was adopted for the Athletic Association. The Debating Club was formed in 1905. In 1906 a teacher of elecution was chosen to give one day a weak to Junior class. In 1907 the School Council was formed which was a representative body of one from each room, with Schior and Junior class officers, to assist in managing the school and creating a spirit of responsibility and loyalty to the school. Also, in 1907 the beginning of Interscholastic prize speaking and library instruction was begun by the Librarian. The industrial course began in 1908. In 1910 we have special afternoon work for pupils who would not study at home, and a special class formed for pupils delaying their classes. In 1910 a teacher of physical culture was secured for Treehman girls and co-operative work with the banks and business houses for connercial students was begun.

Author Advancements -- The co-operative industrial course begun in 1910 could beast of 76 students during the school year of 1912.⁵ They attended school and vorked in shors during alternate weeks. Fortyeight were taking mobile work, five sex-andring, five office work, four drafting, four textile work, two printing, two iron solding, one patternmaking, one druggist, one binamith, one chauffeur, and one grain dealer. These students earned about \$15000 a year.

(5) School Committee Repart of Fitchburg, Massachusetts, 1912, P. 39. First year graduates earned between \$2.00 and \$2.75 a day while one or two everged \$3.25 per day. In other words these former students started out at salaries of more than trice what their school teachers started out at this time.

In the school report of 1921 we have a tabulation of the population growth of the city versus the student enrollment of the city schools. This is shown below in table VII.

TABLE VII

A Quarter Century's Growth from 1895 to 1920

Icar	City Census	City Schools
1895	26,409	3684
1900	31,531	3859
1.905	33,026	4073
1910	37,226	11113
1915	39,656	4715
1920	41,029	5310

By 1920 the following departments at the high school were in operation: Agriculture, Academic Facilish, Business English, Classics, Commercial, Ristory, Industrial, Manual Arts, Mathematics, Music, Modern Lenguages, Musical Training and Science.

Condidates for high school positions had to have a recognized college degree or normal-school diploma, the latter covering at least two years

-70-

of training.⁶ Additional consideration was given to three or four year normal school diplomas or postgraduate college work, as well as subsequent successful teaching experience of any applicants for the approved list.

All conditions had to have direct and recorded recommendations from their nursel school principal, and from their Superintendent or inscitate supervisory official in case of subsequent teaching, and had to file their explications, references and recommendations with the Superintendent of Schools, Fitchburg, on the blank form slopted by the School Board September, 1917.

The number of names could not enceed thirty-five at any one tim on the approved list, which could cover a period not unceeding sin consecutive years next preceding any current year.

Manual Arts In High School -- Not many years ago it was said that a boy could so to school and learn almost everything except how to do the work he would have to do to earn his living.⁷ In order that he might learn a trade at public expense it was necessary for him to consit a erime and be sentenced to a refer story or industrial school. Since then they had not so a progress, for boys could now learn how to do office work, stenography, type riting, bookke ping, etc., while they were attending high school. However, they had not get and adequate provision for training those boys who were scon to go out to do the productive work of the world. It was hoped by the supervisor of manual arts that some

(6) Echecl Condittee Report of Fitchburg, Massachusetts, 1917, pp. 23-37.

(7) School Committee Report of Fitchburg, Messachusetts, 1928, p. 17.

-71-

ing a trade course would be organized in the city so that it would be possible for the boys, no are compelled by law to remain in school until they are sisteen, to spend their time in learning some useful trade instead of devoting so such time to those studies, many of which were never used after leaving the classroon.

<u>Crowled Conditions</u> — The present High School building was built in 1893-1895 and school was opened in the building on September, 1895.⁸ Since 1903, there had been crowding in the building. From 1903 to 1911, the Central Crawar School occupied the first floor. The High School, during that period, was confined to the three upper floors.

As the school increased in size, it took constant planning to nect the needs of the larger number, and finally the Central Gramar School was discontinued, and the High School had the whole building.

Crowding continued until 1915, when the school went onto the double excession; that is, the three upper classes care in the morning from eight until one and the freehann class in the afternoon from one to five. This continued until B. F. Brown School was completed in 1924. In 1920, the Continuation School was opened in this building.

Since 1924, the three upper classes had been increasing in size, and the High School building had been crouded more than over. The registration in the fall of 1924 was over one thousand and the school building had been planed for only eight hundred.

The building had excellent janitor survice, and consequently was in good condition. For a modern high school it lacked proper lunch

(8) Ibi, 1926, pp. 7-9.

-72-

acconditions, adaptate assembly hall, granasium, laboratory familities, margancy rooms or for that matter enough rooms. The building was reported to be in such good condition on the outside and inside that by adding to either or both ends of the building on the original lot they could have had a school building shich would have been up to date and adequate in every way for years to come.

Should there not be public high school building spengh for the child of any citizen of Fitchburg? This was the cry in 1926.

Recrypnization of High School -- The high school was reorganized as a result of the fire of December 15, 1734 which leveled the high school building.

The old High School organization was transferred to new quarters and classes started on January 2, 1935 with a lass of only five school days.

Whe high acheal day began at 12:10 and unded at 5:20 P.M., with six thirty-five minute periods each day, and a double receas of fifteen minutes. Bix minutes was also allowed for passing at the close of each period.

In order to take care of the 1150 pupils in the Senior high school, it had been necessary to use all classes and special rooms in the D. F. Brown J.H.S. and all eight rooms in the Hantings School. This required that pupils go from one building to mather but by placing nearly all the English work in the upper building the traffic between the buildings was out to a minimum. Tables and are chairs were placed in all classrooms at the B. F. Broom School in order to increase the senting capacity and thereby take care of the larger number of pupils who were using the

-72-

building.

The school periods were only thirty-live minutes in length. This was approximately ten minutes shortor than the periods under the old conditions before the fire. This ment a loss on the average of forty minutes per day in class work and instruction on the part of every pupil. Ataly periods were also reduced proportionately.9

Because of lack of space and time it was not possible for teachers to give special help to pupils who may have needed it. Overcrowling made it measures to use the assembly hall for study classes. The light in the hall was not good and since there were no desks no written work could be done.

In order to provide room for typewriting classes it was necessary to deprive the boys of their lunch room. All the boys had to eat their lunch standing up in a rather narrow corridor in the base ent floor. All typewriting was conducted in one large room which was formerly the boys' lunch room. One hundred and ten pupils formed the class which was too large for one teacher to handle satisfactorily. The room was inadequately lighted.

There were no individual lockers for high school pupils in which to boop their coats and other clothing and no deaks in which to keep their books. There was a greater loss of books and clothing than formerly. A perious lack of storage space existed. Baily absences had nearly doubled since the fire. Formerly h0 to 50 pundle or about four per cent were absent each day while now there had been 50 to 90 or seven per cent absent each day. This sorious condition means a greater amount of make-up work on the part of teachers and supils and it very definitely hold back school

(9) Ibid, 1934, pp. 12-15.

progrees.

Classrooms were very shall and very bally overcrouded in mechanical organing, printing and scoping. A considerable loss of time such day took place in going week and forth between each building. Six full minutes were required to go from one building to another and in addition when vesther conditions were bad the health of the pupils was apt to suffer.

There are no scince laboratories. It was impossible for students in charistry physics or biology to do any individual laboratory work as required by colleges for admission. This was a serious handleap to those planning to go on to any institution of higher learning.

New Migh School Duilding -- The opening of a modern, up-to-date, well-equipped school building in September of 1936 began a new era in public secondary education in the city of Fitchburg.

In the spring of 1937 elective cards and programs of studies were issued to incoming freehran, to sophomores and juniors. As a result of their choices of studies the program cards were proposed during the summer so that each pupil concering the new high school building in the fell of 1937 was handed a card outlining his regular work thereby making it possible to start regular classes immediately.¹⁰

World Mar II Atmosphere - The war and its many ramifications had a pronounced effect on the high school. One hundred and ten pupils had last school since the opening of school in September of 1943. All ht boys had joined the enty, 19 the newy, 3 in the Army Air Corps, 1 in the Marines, 2 in the Marchant Marine Service. Minsteen boys and 14 girls

(10) School Committee Report of Fitchburg, Massachusetts, 1937, p. 23.

-75-

had left school to go to work. Seventeen boys and girls had left Fitchburg High School because their parents had moved out of town. Many of these, according to the records, had entered other high schools in these other commuties. Eleven pupils had transferred to Fitchburg High School from other cities because their parents had oved there to Fitchburg to take a ployment in the local industries. Continual readjust ant was and measure by this constant charging of the stadent emplitent. 11

The largest propertion of pupils in the history of the school was working part-time. Approximately four to five hundred were aiding in the nur effort by working afternoom outside of school hoars in the stores and as part-time employees in the war plants in the city and vicinity. The demand had been so great that there were no girls or boys available for employment. Every one who was willing to accept afternoon and laturday work was employed and the total wages earned was approximately 2500 to 3000 per week.

One-Hundbeigh Anniversary - One of the most outstanding phases of the school program during the year 1949 was the commonstion of the 100th Anniversary of the founding of the Fitchburg High School.12 The high school had its beninning in 1849. As early as 1830 a private school called the "Academy" had been actablished by a society called the High School Association of Fitchburg. This school had an attendance of about 50 students and bills there is no record of any person graduating from it, the standard of work was on a high level. It was in 1649 that the Youn of Fitchburg purchased a building for its first public high school.

- (11) Ibid, 1913, pp. 26-27.
- (12) Ibid, 1947, pp. 23-24.

-76-

There were no graduates until 1366 when one person graduated. In 1867, four persons graduated. In June, 1949, there were 242 in the graduating class, which was considered a s all class, because several years previous, when the enroll ent was high, there were 400 in the graduating classes.

By the way of commonstring this great event, the High School, through the efforts of students and teachers, originated a pageant depicting the various steps in the hundred years' growth of the High School. This pageant was presented to the entire student body and then to the alumni at their annual meeting on June 20, 1949.

To carry out further the importance of the occasion, a reception was held after the Baccalaureate Service on Sunday, June 19, 1949 for all meders (past and present) of the school.

The various steps of progress and growth of the High School connoted the growth and progress of our country. New inventions, new ways of living, and new problems all had their effect in the changes of the curriculum to meet the needs of each student.

Perhaps the most profound thing that affected changes in the entire educational program was the compulsory law, compelling children not interested in ecademic training and who would ordinarily leave school at the age of fourteen to remain in school until the age of sixteen. Concedently, a new approach and reorganization had to be made to meet the needs and interest of this group.

there were about 7200.

-77-

-78-

The first high school building was purchased by the torm for about 5,000 (must figure not known) while the present building which was hilt in 1937 cost over 1,200,000.

CHAPTER VII RECENT TRENDS

CUAPTER VII

DUCINT TRIDUG

misf History of Hursery School Moreant and Purpose -- As the significance of the period of growth faring the pro-school years becaus suparant, there developed an increasing interest in establishing nursery schools. Psychologists, physicians and educators agreed that the first six years of a child's life were the next important for the entire development of the individual. In these first six years, until recently, schildren have been in the home entirely. Hest parents did not have the time necessary to give to a child of this age, and even if they did there were very few via understood how to handle a child in the best way, because they had no training in parentheod. Euroscy achools were as much schools for the perents as for the children. The parental education movement and mineary school movements. Mursery schools gave parents the basefit of acientifically trained teachers; teachers who had training in all the many different phases of child life.¹

The pro-school and parental education novement was not purely modern, but was the outcome of the thought leaders in education during samy yourn. The first survey school was started in England in 1905 and was influenced by the kindergarten and Montescori's ideas, which were just developing at that time. The English survey schools, Freebelian kinderpartens, Montescari schools and progressive kinderpartens interacted in the development of the solars survey school. In the United States the first survey schools were started in 1921 in Boston. The

⁽¹⁾ School Committee Report of Fitchburg, Manachunette, 1930, pp. 12-15.

Manan's Manational and Industrial Union of Boston decided to starts a newsery school plong the lines of the English moreory school, and as there was as one in this country prepared to take charge of a school of this type, they sent Nice Abiguil Eliot to England to study the moreory achools there. When she returned she started the Ruggles Street Rowery School, which is now called the Norsery Training School of Norton.

At about the same time Teachers College, Coluctia University, sutherised the opening of a managery school. About 1922 the first nursery school to be used as a laboratory for the education of young girls in the cure and training of children was opened at the Nerril-Falmer Dahool of homomaking in Detroit. Following this, other similar laboratories for child study and care were opened in many home economics departments of land-grant colleges, the first one being at Iowa State College of Agriculture and Mechanics Arts in 1924. This one was followed the sect year by one at Cornell University and at Ohio State. The first surgery school for the not of high school students of homomaking was opened at Highlard Park, Michigan, in December, 1924.

Co-operative nurvery schools have developed in many citizs. The first one was started in Chicago by a group of faculty vives at Chicago University. In these co-operative nursery schools the acthers each had a turn at teaching and a turn at belowre time from their shildren. There was usually a well-trained worker at the head of a nurvery school of this type, and the mothers took turns in assisting her, in this way they gained valuable knowledge in child care.

Eursery schools as developed had many common objectives but still semenhat varied purposes. There were very few nursery schools in the

-111-

United States which were philanthropic in purpose, as were the inglish nursery acheols. Frectically all aimed to serve as a supplement to the here, rather than as a substitute for the home. The first purpose of nursery acheols in general was the scientific care and training of the precedeol child in all aspects of development, and the helping of parents to better understand the problem of care and training of young children. See of the main objectives of modern nursery schools were: To provide opportunities for controlled research, to establish experimental laboratories for the study of educational methods, to furnish facilities for training pre-school teachers, to provide for the cultural and general training of college usion, to train teachers of home economies, to deconstructe best whode of child care, to permit parents to participate in group care of little children, and to train junior and senior high school students.

The first nursery school opened in Fitchburg was at the D. M. Dillon School in the fall of 1930. Children of pre-school age, from two to four years, attended this school. Ten pupils registered the first year and were unitally regular in attendance.

Three different rooms, two for class work and one for a dining room,

A trained nursery school teacher was engaged as director. A cook was exployed from the beginning. One or two local Normal School stu-

Thring its first few manths of existence it was visited by many permute from the city and a great many teachers and adacators from outelde the city.

The catablisheant of mersory schools has been quite rapid since

-32-

this initial venture is nutsery schools on the local scene.

They were reopened in October.

The result of the training given in these schools was very marked. This was shown by the pupils when they entered the first grade. They were found to be much more advanced socially than the children without this training. They seemed to make very definite progress in the atmosphere and life of the school.

Coordination of Various Hements of the School System - One of the mode round in every city was that of co-ordination in the various parts of the school opeter. Fitchburg was no exception in this respect.³ The various grales and schools required greater uniformity in the courses of study, textbooks, and time schedules, in and between the schools of the city. With these needs in mind eleven committees of principals and teachers in grades one to six were formed for the purpose of studying and revising the curriculum in these grades.

Another important problem areas in connection with making provision for children the ware mentally retarded. Two special classes were already in emistance at the Opportunity School located in the Richardson

(2) Ochool Committee Report of Titchburg, Manuschwotts, 1934, pp. 6, 9.

(3) Ibid, 1936, pp. 9-16.

-13-

Read building. These classes, according to state regulations, could not small sure that thirty-rix pupils, a number quite insufficient to much the mod. A special class for younger children began operation in the full of 1935 in the Academy Street building. However, there was still a most for additional classes to take cars of these children in the public schools who were unable mentally to profit from group instruction as it was given in the regular school classes. A recent survey should that Fitchburg had approximately 123 children in the city who were retended three years or more mentally and only fifty were being cared for in the special classes.

The W. P. A. regulation that children must leave the nursery schools upon reaching their fifth birthday related the question of entrance age to the first grade. After some discussion of this matter the School Committee desided to minit to the schools where vacancies emisted children who were under the required age for entrance provided they were physically and untally able to profit from first grade work. As a result of this action mustal tests were given to fifty-four children, of when furty de constrated their readiness for first grade entrance. Reports later indicated their readiness for first grade work setiefieterily.

The organization of the teaching stall for the souly and revision of the elementary school curriculum was a major undertaking during the 1936 school year.¹ One important purpose of this work was the adeption of the school program to changes that were constantly taking place both in the shild's environment and in the matheds and means of instruction.

(4) Ibid, 1936, pp. 21-27.

-64-

A second major purpose was that of effecting accomment upon a basic plan of instruction in all schools of the city. This plan was to be submitted to the school authorities for adoption. Such a city-side plan of instruction was to be beneficial in several ways. It was to provide the necessary common ground on which the teachers of all schools could next for the purpose of making a continuous study, analysis and improvement of alms, content and withods as well as for the general purpose of matching and cultivating the professional interests of teachers. Also, a city-side basic program was to enable pupils to transfer from one school to another sithout a surious break in the continuity of their studies.

For the carrying lorward of these purposes, the following eleven study committees composed of fifty principals and teachers were formed:

Reading	Grades I-III
Reading and Litersture	Grades IV-VI
Initiatic	Grades I-III
Arithmic	Grades IV-VI
Langoago	Grades I-III
Language	Grades IV-VI
Social Studies	Grades I-III
History	Grades IV-VI
Reopraphy	Gredes IV-VI
Health Education	Gr de. I-VI
Science	Grades I-VI

One of the important automoths of the curriculum study was the adoption of a banks system of primery reading and its introduction into the primary prodes throughout the city. After a very careful consideration of many systems by the Committee on Primary Reading, the Elson-Gray

-35-

worken was recommended and morphod. This syntem was recognized as one of unneal marit is two respects: (1) The excellence of its plan for giving children the technical training required. (2) The Curriculum Foundation series of supplementary books that accompanied the basic readers and a smiller vocebulary and mabled primery children to gain through their our reading the elementary understandings in health, art, science, without a mit the social studies. The contents of each field had been prepared by subject experts and then adapted in vacabulary and concept to the reading ability and mental maturity of children at the different prede levels. The child geined information and enriched his understanding through a carefully planed curriculum at the same time he learned to read. This Curriculum Foundation series seemed to make a genuine contribution to the impreventant of primery education.

Tince the quality and quantity of textbooks available was recognized to of uch importance in providing and carrying out a sound program of studies on analysis of the textbooks used in grades one to six of all schools was also made at this time. The information included the name of the book, wither, publisher, date of publication, physical condition and maker in use.

The survey indicated that there was a wide variation mong the schools in the basel books, that many books had been in use for a long period and that a considerable short-ge of textbooks existed in the fields of spelling, history, hygione citisenship, science and dictionarises.

The variety of texts in use had arisen from the provide of placing upon each school the responsibility of selecting its textbooks. The shurtens is recently published textbooks was doubtless due to the fact

-36-

that Fitching, in common with many other cities, had not made in recent years the annual replacements that it might have made under eare prosper-

<u>Elecentary School Hours</u> -- In order to secure uniformity in the time of principals discussed the matter and recommended a uniform schedule, which was authorized and put into operation in September of 1937.⁵ The schedule put into operation was as follows:

	Grades 1-6	Grades 7 and 8
	Norming Session	
Warming Ball Opening Closing	8:30 8:40 11:40	8:15 8:25 11:40
	Afternoon . e sion	
Murning Dell Opening Closing	1:10 1:15 3:15	1:10 1:15 3:15
	Becses Pariods	
Norming Afternoon	15 intes 10 intes	15 minutes 5 minutes

Uniform echools have were also promulgated at this time for the junior and penior high schools of the city.

Education For The Montally Mondicapped - On October 19, 1940 the otate convention of opecial class teachers was held in Fitchburg. Many new ideas and suggestions were offered by the well planned program to train these handicapped children. The Einenthetic Mathed in reading was

(5) Sebool Committee Report of Fitchburg, Macsachusetts, 1937, FD. 12-13. demonstrated as a help to the slow reader.6

Special education for the mentally handlenpped was a part of the total educational program in Fitchburg and was required by state law. It was one of the means of adapting the educational program to meet the meets of the individuals who deviate so greatly below the average that their meets cannot be not by the program for average pupils.

It was reported that subnormal pupils fall at the lower end of the distribution of montal ability and range from about 35 I.Q. to about 50 I.Q. In the year 1940 Fitchburg had nearly two hundred such children in its schools of which one hundred and twenty five were in special classes. Experience had shown that many subnormal pupils could become socially and economically profitable citizens if they were given adequate training and guidance. Conditions surrounding their personalities were recognized as quite different from the normal pupils.

- 1. They had very limited ability in solving abstract problems.
- 2. They were unable to give close attention for the length of time that was typical of average students.
- 3. They had less than average ability to exercise what was commonly known as "good judgment."

The program had been carried on with the above thoughts in mind. Since it was known that these pupils, with a few exceptions, could not achieve abstract work beyond the fourth or fifth grade, the work was planned on a level wherein they could succeed in doing something. Roading was their chief difficulty and many hours of drill in short intervals of time were spent in trying to teach these pupils the basic elements of

(6) Ibid, 1910, pp. 16-17.

-88-

simple ronding.

The neutrally handle apped more considered a legal part of the city educal motor and city school population. They felt that all that was possible must be done to aid them in becoming useful citizens. As the mentally handle apped became older and achieved somewhere near their peak in tool subjects, nore explasis was placed upon projects of practical value such as house explasis was placed upon projects of practical value such as house explasis was placed upon projects of practical value such as house explasis. Many of these boys and girls found work in jobs such as the following after they had left schools; simple factory work, measurer service, household work of all kinds, farm labor, selling papers, truck driving, truck driver's helpers, delivering milk and assisting in lunch rooms.

-39-

The Manuation of Cifted and Talented Children⁷-- Parents and teachers always know that one child differed from another in many ways. Wise teachers always took these differences, insofar as they could observe them, into account. It was also realized that with scientific opportunities and endpoint for testing they could tell with a greater degree of accuracy the extent of these differences. It was further realized that children of 110 I.Q. or higher could do more work than the ordinary courses of study provided. It was not believed that these children shall ship a grade entirely or do double work in order to skip a grade. Rather, it was believed that the more netural method of procedure was to find more opportunities for them to do extra work and remain with their regular group by developing an enriched program for them, such as the following:

(7) Ibid, pp. 18-20.

1. Here leadership opportunities.

2. More music and art work.

3. Apply problem solving techniques to new experiences and the cries.

4. Here detailed work reports in English or more detailed descriptions of characters.

5. Making charts, models and diagrams to clarify certain subjects.

6. Participation in dramatics, debating, etc.

7. fore research activity by use of encyclopedias, maps, graps, etc.

 Making excursions to places for information-factories, Public library, rt Center, stores, etc.

9. Leaders in group discussions.

Ther ways other than the above could be found by teachers as a means of furnishing an enriched program.

Furthermore it was recognized that the mind of the superior child could to be endowed with certain special qualities easily recognized, mong which the most outstanding was great intellectual curiosity. In his intimized quest for knowledge and inderstanding, he not only acked vocally for information but also used every available source in acquiring the facts he needed. This type of child was rarely satisfied with a memory, superficial inster; he wanted all the facts he was capable of understanding and he was willing and eager to do his own research. It was the teachers' duty to guide and lead him into the proper channels.

The superior student in high school should deeper interest in his work; he absorbed knowledge readily; his responses were knowner and more vivid and he was able to concentrate for comparatively long periods of time. He employed excellent wethods of work under a minimum amount of direction and guidance. Generally speaking, he was not mechanically minded and was scattines careless in mechanics of spelling, writing, punctuation and computation, because of his speed to get things done. This weskness should have been given careful attention by the teacher.

In 1945 an efficial Guidance Department came into being.⁸ Through the Guidance Department they were able to administer aphitude tests and help been and girls to decide upon their future career. Not always me the right choice made, but it certainly was an improvement over the old hit-or-mins plan. Boys and girls made their own choices under the leadership and counceling service of the guidance directors who followed them through school and assisted in placing them after graduation. They contimued to follow them until they were definitely and happily placed in their life's work.

<u>Decodial Reading</u> -- A remedial reading program was begun in the city schools for the first time in its history in 1945. This program started in the privary grades under the direction of a trained and will equipped teacher. It was hoped that this new venture would help solve many probles in reading difficulties in the primary grades. Reading was felt to be the next important subject in school. A complete analysis of problems leading to reading difficulty were hoped to be made in this new program.

Urgent Present Day Issues -- Two of the next inportant issues facing the school system of the city were the building requirements and the need of a greater supply of well-qualified teachers.9

(0) Ibid, 1945, pp. 20-21.

(9) School Committee Maport of Fitchburg, Massachuretts, 1949, pp. 6-12.

-91-

They realized that good school buildings did not guarantee good mucation, but they helped a great deal. They wanted schools to be wholes on places for learning and growth. The surroundings were to be safe, comfortable, clean and attractive at all times. Fitchburg to date had been fortunate enough to have space enough to accommodate their children. However, the school buildings were old and required great care to run them and maintain them. In contrast to many new school buildings in other communities using oil burning equipment for heating, coal was used in most of the Fitchburg schools. Much of the custodians' time was used in taking care of the furnace. Time saved here, by having oil burning equipment, could have been used by the custodian in cleaning and performing other duties more efficiently.

The following is a brief surmary of the Fitchburg school buildings and their present needs:

1. The Academy street school has outlived its usefulness in meeting modern needs. It is one of the oldest schools in the city and should be replaced at the first opportunity. There are thirteen class rooms in this building, four on the top floor which cannot be used for classroom work. It was suggested that a new building be built in this area or an addition to the B. F. Brown School be made. The most economical plan would be to built an addition to the B. F. Brown School to house the grades of Academy Street School and the sixth grades in the Hastings School and also to allow for expansion of the B. F. Brown. This would require an addition of eighteen to twenty rooms. This plan offers many advantages: the children would have access to the Love Playround, whereas not the present situation is very unsafe as the Academy Street School is bounded on all mides by streets, heavily used by attembiles and true s;

-92-

also this addition would provide a mich needed recreation room, lunch room and backth suite to care for the wany children who remain at school during the moon hour. We should also plan space for the state clinic, principal's office, remedial reading room, and office for drawing supervisor.

The enrollment in this school is increasing y arly and the building is not used to capacity with the exception of the top floor. Since this building in deteriorating r pidly and is located in a danger some with many traffic hazards, it is hoped that serious thought will be given to this project at once. A building commission should be appointed to investigate the possibility of obtaining state aid in carrying out this project.

Another great advantage in building an addition or annex to the B. F. Iron School is the possibility of establishing the 6-3-3 plan. A section of the building - the top floor - could be used to house the ninth grade and it would be entirely separate from the elementary grades. So, that with the exception of Teachers' College Junior High School all of the seventh, eight and ninth grades would be housed at the B. F. Brown School.

2. The Ashburnham Street School, while not in the best of locations to met the growth in this area, is in fairly good condition.

3. The L. T. Brown School was built in 1924. It is a semi-fireproof building and in fairly good condition. During the past year a new intercommunicating and sound system along with a new clock system had been installed.

4. The Clarendon Street School upper building was reopened in 1949. The class rooms were being used and there of the rooms in the lower building were being used leaving three vacant rooms in this district. New lights had been installed and the grounds were put in good condition during the past summer. With a few minor repairs it was reported that the

-93-

harilday could be put in excellent condition.

5. The D. M. Dillon School, located on Day Street, contains ten class rooms and most of then were in use. It is one of the oldest buildings and moods much repair. The Coolidge Dental Clinic is located in this school and as a result many parents visit it. It is now being almost entirely used by Teachers College as a practice school and in view of its importance to this area, it would be advantageous to all concerned to have this building completely renovated.

6. The Goodrich Street School has been painted quite recently but there still is much to do. A new clock system is needed, new lighting, stair trends repaired and the school yard needs a binding material to make it suitable as a playground. The building has two vacant rooms.

7. The George H. Hastings School is one of the oldest buildings. It is basically in fair condition but needs some repair at once. It should be pointed inside and out. New window shades are needed, new lighting of star, relace and of a door and toilet seats and a sink and running star in the mop. Located in this school are two sixth grades, four special classes, and the General Vocational School for firls.

8. The new High School should function very well with very little expanse, but the building is very much in need of painting inside and out. The blaschers in the gromanium need repairing and refinishing. The range in the cafeteria need rubber mats or some other material to prevent alipping. A special fire alarm bell is needed in the woodworking shop. Stage righting needs inspection and renewel. Also, the stage curtains and window desperies need repairing and the mechanism checked. Last year this achool was given a new inter-communication and sound mystem, additional fire alarm bells and a new roof over the gymnatium.

-94-

9. The Accept F. Holfman School located on School Street is meeting all the requirements in this district for grades one to four. It can accomposite a few ore children but should it become overcrowded some terminiers can be made into the Academy Street School district. This building meeds printing inside and out. A new fence is very much needed around the front yard and the hedge should be replaced. The iron fence beeds repair and paint. Many desks need refinishing.

10. The Norman School has four empty class rooms, which will provide space enough for years to come. The building is in fairly good condition but needs painting inside and out. New lights have been installed and it is hoped that the building will be painted this year. New toilets are needed for both boyr and girls. The grounds of the building need attention badly.

11. The Laurel Street School was completely renovated this year on far an printing inside and out are concerned. This was a great enpende to the city owing to the dilapidated condition of the building. Nonever, teachers, children and parents look upon this building with greater pride than over before now that the work has been completed. The only mode at this school now are some new furnishings, window cords restared, new towal and scap containers, and toilet facilities checked.

12. The innerburg Street School is not in the best location to meet the mode of expansion towards Marshall Road. However, it is in fairly good condition and all four rooms are in use. The building needs painting inside and out, a new lighting system, several electric outlets is the class rooms and the playground needs resurfacing.

13. The Nolan School has five capty class rooms. It can care for

-95-

my increase in that locality for many years. The building is in fairly pool condition and serves as a community center. The gynnesium is used nearly every night by young people and several classrooms are used in evenings for abult education. The building needs painting inside and out. Some of the brick walls need repointing. The girls' playground needs resurfacing and the water sain entrance needs to be changed from low pressure to high pressure.

14. The Michardson Road School, which is now closed, is a two room building. It is not considered to be in the best location to care for the increasing population in that district but it could be used, at least temporarily, and can be reopened at very little expense. The children in this area are now attending the Academy Street School.

15. The South Fitchburg School has eight rooms and only four are in use. It is expected that there will be considerable increase in the school enrollment must year due to the completion of the new howsing project. There is ample room in this school to accommodate the anticinsted increase. The building needs painting inside and out, also a new lighting system, new front doors, window shades and a new hall floor. In electric offict is very much needed for audio-visual aids work.

16. The Wachusett School is in fairly good condition. New lights have been installed but the building still needs painting inside and out. This school yard needs attention as well as minor repairs on the inside of the building. This is a five room building with only two classrooms in use.

This remae of our schools in Fitchbury shows that most of thes are badly in coad of repair. This is partly due to the lack of labor and seterials during the war. It is suggested that definite plans be made

-26-

by the Billding Department for a five year program to put all of our schools in good condition by concentrating on three or four of them each year.

<u>CHAPTER VIII</u> SUMMARY

CH PTER VIII

SUITARY

Origin and Development of the Public School -- The Town of Fitchburg and the public school system of the town came into being during the same rear of 1764. For the remainder of the century the foundations for the infant town were laid and along with it the foundations for its school system.

During this period of foundation building the town was districted into several parts and schools were built for each of the districts.

The duties and powers of the School Committee were clearly defined chortly after the turn of the century and there hasn't been much change in the since. One major difference in this respect is the fact that clerry on were chosen as members of the School Committee whereas there is no instance of this today.

Around the middle of the mineteenth century Fitchburg began to row repidly with the attendent need of more housing and more teachers. The people became quite conscious of their educational needs and what was just as important they were willing to appropriate the money needed for this growth.

Also, at this time, printed school reports had their inception. They dealt chiefly with the defects of the school system of the years around 1850.

An attempt was made to redistrict the town for schools in 1846 but little change was made in this respect to the original districting of the town.

1950 along with alteration and repair of old ones. A good percentage

of these buildings are still serving their purpose.

From Town System to City System -- In 1872 Fitchburg became the City of Fitchburg. The school system embraced High, Gramar, Intermediste, Secondary, Primary and Ungraded Schools. The Grammar schools received the children from the smaller schools made up of the Ungraded, Primary, Secondary and Intermediate schools. The High School received the children producting from the Grammar schools which were strategically located throughout the city.

By the turn of the twentieth e ntury most of the major changes in the public school system of Fitchburg had taken place. The buildings, organization and traditions had been set. The estence of these are still with the system today along with the few modern buildings and innovations after the turn of the century.

Murrery schools and kinder artens came into being after 1900. The vocational school which had started as a continuation school found its roots after the turn of the twentieth century. The economic depression of 1930 was another reavakening of the people to the value of education.

The value of vocational school training is no longer doubted by thinking parents. This was especially evidenced right after World Var II when very many of the ex-service on sought admission in the Apprentice Training courses offered.

The various steps of progress and growth of the High School Collowed the growth and progress of our country. New inventions, new ways of living, and new problems all had their effect in the changes of the curriculum to meet the needs of each student.

The most profound thing that effected changes in the entire

-100-

to remain in school until the age of sixteen. A new approach and re-

Present Situation and Challenge -- Fitchburg has too many public school buildings based on the evidence that many of the buildings have one to three entra rooms that are not being used. Based on the opinion of the best athorities in education elementary schools can be nost afficiently administered with an enrollment of three hundred to five hundred students. Fitchburg's geographical area does not lend itself well for centralization to this extent but it might be well, however, for the board to make a complete survey of the school buildings from an scenamical view point.

Larger schools would furnish a better opportunity for the organization of classes in a more uniform menner and provide for a better health and anfaty program. Also, it would provide an excellent opportunity for providing and serving hot lunches. None of the small schools are equipted for a odern educational program. There are no recreational room, no sudio-visual aid rooms, no proper rest rooms for sick children, no munic room or art rooms and no proper meeting places for parents.

The challence which faces the Education Department of the City of Fitchburg is the task of helping all its citizens to equip the selves with the skills and knowledge to keep abreast of the constantly changing public scene, to participate in a democracy, to fulfill the responsibilities of family life and to find the means of constantly enriching their own lives and lives of others. The Education Department has been constantly attempting to meet the means of its

-101-

citizens and to expand the opertunities for learning and study.

An Area Vecational School adapt well be located in Fitchburg as many of the pupils case from surrounding towns. It should be possible to procure state and federal aid for such a school. A progressive Area Vecational School would be of service to the community in that it could supply skilled help to local industry and it would also serve as a factor in bringing new industries to the Fitchburg area.

APPENDICES

EXAMINATION FOR HIGH SCHOOL ADMISSION IN 1875 FITCHEURG HIGH SCHOOL COURSES OF STUDY OFFERED IN 1849 AND 1949

APPENDIX I

TXANDIATION FOR HIGH SCHOOL AD HISSION IN 1875

The following questions were submitted to the graduates from the range schools in Fitchburg who applied for admission to the high school in 1875. The questions were printed upon slips, and a copy of it is placed in the hands of each candidate and read as follows:

For Admission to the Fitchburg High School, July, 1875.

General G ography -- I and II. (... How many continents, and the lest (b.) The difference between an island and a continent; between trait and an isthmus; between a cape and a promontory; between a decree of latitude ad a degree of longitude? (c.) In our latitude, ould you prefer to walk over a degree of latitude or degree of longitude? and why?

III and IV. (a.) Does North America or Africa extend further south, and by how many degrees? (b.) Does North America or South America lie further east, and by how many degrees? (c.) that are the lar est river basins in the new world - by what large rivers are they drained, and what are the principal tributaries of those rivers: (d.) that are the rincipal mountain ranges in the new world, their general dir ction, their extent, and how do they compare with those of the old world

V. Name ten cities of the United States lying north of latitude 40, and five lying south.

VI. State what you can of France - its people and their occupations; its minerals, its productions and its cities.

VII. Mat do you know of Edinburgh? of London? of Madrid? of Rome? of Serdinia? of Berne of Vienna? of Athens? of Constantinople? of St. etersurg?

VIII. sia, in what zones? Its highest mountains - that and there? Its principle rivers - their names and their course. State but ou can of China.

Lond X. (a.) If you wished to secure a car o of oran es, bananas, cacho, pimento and indigo, to that cities of North America toul you go? (b.) If cargo of surar, molesses, coffee and tobacco, to it cities (c.) A ship cone into Boston harbor whose cargo consists in art of it only, huber, stuff, dicines and india ruber. For that port in South America did ship of ably sail? through that near only ass, if by that railroads could the car o be distributed (d.) Do the emorts and morts of a country help you to indice of the remotes and morts of a country help you to indice the remotes in indicatives of that country? If so, how? (.) If on eccunt of the failur of the crops in prope, you wined to there car o of the flour, where you'd you buy it, by it means bring it to tide ater, and to that port would you send it?

Mithatic -- (Give enough of the work to show the mode of reason-

I II. (a.) Then are numbers price to each other? (b.) Note to consider there which are rin to each other. (c.) What is the least common multiple of any three prime numbers? (d.) What factors is the least common multiple of several numbers contain? (e.) If in any iv new ple in division, the divisor be multiplied by three and the dividend be divided by five, precisely what will be the effect upon the quotient? Explain the last.

III d IV. (a.) If A can do a piece of work in three days, and four ays, after they have worked together one day, how long will it the C to finish the work, if he could have done the whole will in half d s? Explain. (b.) A fox is 60 rods in advance of a dog. If the do runs six rods while the for runs four, how far must the run to overtake the ox? Explain. (c.) I bound he can at the run to jects, and sold them at the rate of 3 for h cents, and 7 cents; how many lemons did I buy? Explain.

V and VI. (a.) If 2.3 of a poind cost 4-5 of a dollar, what will 3-b of a pound cost? (b.) What ill 3-h of a dollar buy: Analyze.

VII. A an began trade with a capital of 4000. The first year nimed 12 per cent, and added it to his capital. The next year he ained 8 per cent, and added as before. The next lost 10 per cent, and year phis sciness. That per cent did he gain in the three years?

VIII. What is the interest of 1734.72 for two years, 1 mo. 15 ds., at 8 per cent rate.

IX. I us a an 700, due in 4 months, without interest. Being in whit of any, he says that if I will ay him 300 today, I my keep the reminent till the interest upon it, at 6 per cent rate, would be 20. How long ay I cop it?

A rehant rishes to mark his cods so that then he falls off 10 per cent from his marked price and 10 percent more from sales that will be had debts he may still make 15 per cent. At what per cent adunce on the cost mark them?

(.) In the var. (b.) Under that sovercise. (c.) by that percents. (.) The let r alts? (e.) that places to be their names from the read of (f.) but on the start, in the read, of the E light claim (.) In the read of the start of the communication of the start of the

III and IV. Colonial Mistory .- (a.) What colony first settled?

-105-

(b.) Man? (c.) I that company, and with that results? (d.) that along not in order of time? its date (c.) By what company, and the set access? (f.) Passing over the third in the order of time, nee the ourth. (g.) State its complications with the Dutch, and it if iculties with the natives; and (h.) give anything of in ortance to either of these colonies.

VI. Contennial Years.- (a.) By is this year called a contennial? (b.) State the incidents and occurrences which give charct r to this contennial? (c.) State your idea of the bearing of those incident upon the country the next few years. (d.) At the battle incident upon the country the next few years. (d.) At the battle incident upon the country the next few years ago, who were accounted the victors? who are the real victors? (e.) If you think the next year shall or properly be called the contennial, ive your reasons, and in h of the history of that earlier year to justify your opinion.

VII and VIII. (a.) Name the first president of the United States, and the may the attention of the courtry was turned to him. (b.) in my other residents the were distinguished soldiers, and name the a., if for of the battles in thich they distinguished themselves. (c.) He cany of the presidents especially distinguished as states en, if two is ned the declaration of independence. (d.) Name the overnooid lientenant governor of Massachusetts, the president and ic president of the United States and the chief justice of the suprecourt.

IX. (a.) When and there was Washington inau ursted? (b.) How any recutive departments did congress then establish, and what were they (c.) to appointed the heads of the departments? Ho were the appointces, and what do such officers constitute?

. hat privileres were secured by the thirteenth, fourteenth

La use -- I and II. In the analysis of a sentence, what do you first collowing:

"But robin red-br ast builds his nest, Singing a on of the joy to come, And the oriole tri s his rolden vest, Glad to be back in his last year's home."

Purse the words italicised. That kind of a work is red-breast? That does BUT connect? Give the principal parts of the worb in first line.

TI and IV. White a sectore having a subject modified by two edjective elements and a company predicate, one of which, it least, whall have an objective modifier, and the other two adversal modifiers. Company the adjective, if companyies, new the connectives of the predicates, and parce one of the adverba. V and VI. Change the following, so much as should be changed, into direct quotation: The boy returned, and said that his father would call at moon.

the active volce: His father sent John to school in the early morning. The curringe was uppet by the driver, just as he turned the corner. Put the very turned, also, into mother form. Compare courageous; decline the; iv the symopols of the irregular verb to lie; and tell all you into a finh.
