About the Transition Institute

The Transition Institute was co-founded by Social Enterprise London and NESTA in May 2010. Our mission is to support a growing network of extraordinary organisations and individuals at the cutting edge of forming exceptional new public services that deliver real social value.

We aim to:

- inspire a new generation of public service providers that blend the best of the public, private and social economy in the way they provide public services
- build a community of people engaged in the formation of these new organisations
- share what works, while being informed and grounded by real-world examples.

The Transition Institute supports the emergence of public sector staff setting up and then spinning out independent organisations to deliver innovative and effective public services. Often public sector staff spin-out their services not simply to reduce costs but also to protect the rich history they have developed with local communities and to build on it.

We are at the forefront of this new wave of public service reform and through our research programme and series of publications we intend to unpick the issues and complexities involved in this shift. This survey builds upon the data collected in the 2013 'State of the Sector' research to provide a rich picture of the needs and wants of UK spin-outs in 2014. For further details on publications, case studies and policy documents, please visit the Knowledge Hub section of our website:

www.transitioninstitute.org.uk/knowledge-hub

Acknowledgements

This report has been the result of considerable hard work and dedication. We would like to thank the following people for their input.

- Collaborate at London South Bank University.
- The University of Northampton's Professor Simon Denny and Vice-Chancellor Professor Nick Petford.
- Rory Swinson-Reid for actively securing responses for and managing the survey.
- The members of the Transition Institute's board for their advice and support.
- Dr Simon Griffiths of Goldsmiths, University of London, for peer reviewing the report.
- Finally, we would like to thank all the spin-outs who completed the survey and shared their insights and experiences of the spinning out process. We are hopeful that their 'case histories' will prove highly valuable to other organisations wanting to do the same in the years in come.

Foreword

Providing Quality Care

Firstly it is a great privilege to have been firstly considered and then asked to write this forward to what is a great piece of sector research that I hope you will agree continues the great outputs we have seen over the years from the Transition Institute. All forms of enquiry that add to the body of evidence for the spin-out sector's future sustainability and prosperity are very much required to gain the credibility we all need to demonstrate not just our individual worth but also our collective contribution to the wider wellbeing and prosperity of the UK's economy. I believe such diverse and in some cases very mature organisations offer all political parties solutions to the question of how sustainable, efficient and productive publically funded services can be delivered now and in the future.

Practically one can say that here at City Health Care Partnership CIC (CHCP CIC), our co – owned for better profit business, is nothing like the organisation that we spun out from, never mind the organisation that we were in those heady early days. Now near four years old we have seen growth of around **10%** per year, delivered year on year **4%** efficiency plus a **3%** profit target of which **65%** has been invested into frontline service development. Our current externally validated social return on investment (SROI) is **£33 for every £1** invested now through our year old charity, a figure that has increased year on year since leaving the NHS. We are in many respects now a group of companies with majority shareholding in four "for profit businesses" that deliver everything from pharmacy through to Risk and Contingency cover whilst we also hold an equal share with four other spin out colleagues in the likes of Albion Health Alliance Ltd which has been set up as a vehicle to help invest in businesses looking to develop health improving ideas and products. Our patient survey

showed that **98%** of respondents had trust and confidence in the person they saw. In addition, since leaving the NHS we have seen a 14% increase in people rating our services as 'excellent'. I am delighted that **93%** of staff tell us that their role makes a difference to patients and **87%** of staff would be happy for a relative or friend to receive treatment from CHCP CIC.

Anyway, enough from me, I recommend that you read this report and I hope you will agree the facts are starting to speak for themselves. I know I feel liberated, able to do my job better by being part of a vibrant and successful spin out, where we can treat people as individuals, responding to their needs as people, and not just patients.

Andrew Burnell

Chief Executive, City Health Care Partnership

University of Northampton – Some thoughts

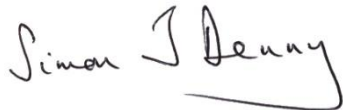

All UK governments have said they want new and profitable businesses that innovatively improve performance and quality, and that create hundreds of new jobs. The good news is that they have them in the shape of public sector spin-outs. What the 'Public Service Spin-Outs: Needs and Wants' report clearly shows is that, when the people and the environment are right, spin-outs from local authorities, the NHS, and other parts of the public sector are successful, vibrant and dynamic businesses. Some of the findings of this report would, perhaps, be counter-intuitive to many ill-informed people. We often read or hear in the media that our public services are over-staffed. However, the evidence shows that when they are spun-out the demands for these ex-public services is such that additional staff have to be taken on; so much for being over-staffed.

The picture is not all positive however. Although many spin-outs have been very successful to date, real concerns exist in four areas:

- the ways in which commissioning frameworks may not be suitable for treating spin-outs fairly;
- the ability of spin-outs to access finance when they need it;
- the lack of all-party political support, committed to maintaining spin-outs as a part of the UK economic 'mix';
- the time it takes spin-outs to become sustainable and reach the take-off point for growth.

We are fortunate that organisations such as the Transition Institute commission and publish research such as this report. The evidence based conclusions provide policy makers, and would-be policy makers, with the facts they need to make decisions that will affect all our futures.

I very much hope that this report gets the attention it deserves, and that the evidence it presents helps to address the four concerns noted above. It is not often that the UK has such a genuine success story as that presented by the public sector spin-outs covered by this research; we should ensure that this success is built on.

A handwritten signature in black ink that reads "Simon J Denny". The signature is written in a cursive style with a long horizontal flourish at the end.

Professor Simon Denny

Director of Enterprise, Development and Social Impact at the University of Northampton.

Section 1 – Executive summary

The spinning-out of public services into mutuals and/or social enterprises represents one of the most ambitious aspects of public service reform in the UK over the past two decades. However, the impact that this has had on stakeholder participation; service design, quality, provision and sustainability; as well as on the local communities that they serve is to date limited. This is to be expected due to the newness of the spin-out sector and the relatively recent academic interest in the field. The research reported in this paper is the result of collaboration between the Transition Institute and the University of Northampton, and builds upon the 'State of the Sector' report that the two organisations jointly published in 2013.

Specifically, the research aimed to assess the:

- **current state** of the spin-out sector
- **key triggers** for public services spinning-out
- **longitudinal importance** of different **stakeholder groups** within the spin-out process
- **main issues** that spin-outs feel should shape the future of the sector (needs and wants) and what policy approaches they would like to see in the 2015 election manifestos of the main political parties.

The research adopted a quantitative methodology that utilised a questionnaire that was completed either online or over the telephone by participants. A review of secondary literature identified 201 potential spin-out organisations and these were all approached and asked to participate in the research. In total 66 organisations responded giving the research a response rate of 32.84%. Statistical analysis was completed on the data gathered including descriptive statistics, chi-squared analysis, ANOVAs and correlations (further explanation of these tests are provided in the methodology and results sections).

The research outlined in this report has identified that the spin-out sector is experiencing sustainable growth in relation to turnover, profits and staffing levels. Indeed, this growth is driving both increased service provision and employment, which is being delivered at local

levels. However, this is not to suggest that the spin-out sector does not face challenges. Indeed, the participants in this research identified a number of serious concerns relating to the future sustainability of the sector. These include:

- commissioning frameworks and their suitability for fairly treating spin-outs
- access to finance both in securing contracts and seeking investment
- a lack of perceived political support for spin-outs
- the time taken to become sustainable and deliver growth

The research also identified that spin-outs appear to operate as partnerships and/or multi-stakeholder collaborations and that the importance of various stakeholders changes over time. This has important implications for those public services exploring the option of spinning-out as it provides a potential roadmap of the partnerships that they should be forming at different stages of the process, and the importance of different triggers in creating and driving the opportunity to spin-out.

Finally, the research data has led to the creation of three core spin-out '**needs and wants**' in relation to the 2015 UK general election, as well as two further policy recommendations. These are:

1. UK general election 2015:

- i. Commissioning reform** so that spin-outs can compete on a level playing field.
- ii. Political support** for the spin-out sector and a commitment to innovation within the delivery of public services.
- iii. Public Funding** streams for spin-outs in order to grow the sector, similar to the 'Social Enterprise Investment Fund' (SEIF) that operated in the health and social care sectors.

2. Access to finance: Support to assist spin-outs to become more investment ready is needed. However, there also needs to be work done on the supply-side to ensure that investors are more open to investing in the sector.

3. Partnerships: Policy frameworks, roadmaps and toolkits that acknowledge the partnership element of spin-out journeys will greatly assist the development of the spin-out sector.

Section 2 – Background

2.1 – Overview

Over the last two decades government policy towards public service reform has included extensive changes to both the supply and demand sides of the market. This has led to a ‘marketisation’ of the public sector in which public services at both a national and local level have effectively been opened up to competition from the private and third sectors (Hall *et al.*, 2012b; Simmons, 2008). This market-based reform of public services has been implemented due to a desire to create more cost-efficient services and has been based upon the mantra that market mechanisms are the most effective means of delivering this goal. They include reforms around legislation and funding and in implementing them, successive UK governments have encouraged the transfer of local authority staff into new employee-owned mutual organisations (also known as ‘spin-outs’).

‘Public service mutuals’ have been defined as ‘...organisations which have left the public sector i.e. spun out, but continue to deliver public services and in which employee control plays a significant role in their operation’ (LeGrand and Mutuals Taskforce, 2012:9). However, at the present time there remains a paucity of research (and specifically quantitative data) into the spin-out sector in the UK that identifies the triggers for spinning-out, stakeholder engagement, the demographics of the sector and the needs and wants of spin-outs moving forwards. This is particularly pertinent at the current time as a general election is imminent. Indeed, current and reliable data can assist all political parties to make informed choices on the future of public service delivery when writing their election manifestos. This research reports survey data captured from spin-out organisations between November 2013 and March 2014 in an attempt to fill this knowledge gap.

2.2 – Background and triggers for spin-outs

During the late 1980s and early 1990s there was considerable debate amongst academics and policy-makers about the need for government to become more ‘entrepreneurial’, as it

was felt that this would make government more democratic, less risk-averse and more dynamic (Osbourne and Gaebler, 1992). In the UK this led to the creation of Housing Associations in the late 1980s and New Leisure Trusts in the 1990s. Over the last decade there has been a desire to involve the third sector (and more specifically social enterprises) in the delivery of public services through what was termed the 'third-way' of welfare delivery (Haugh and Kitson, 2007). This has led to a growth in the number of public sector mutuals and social enterprises that deliver public services. Indeed, the English government is investing in public service mutuals (hereon in referred to as 'spin-outs') through programmes such as the £10 million 'Mutuals Support Programme' and its precursor the Mutuals Pathfinder Programme (Le Grand and Mutuals Taskforce, 2012; Cabinet Office, 2011). There has also been specific support to the health and social care sectors through the 'Right to Request' and 'Right to Provide' initiatives (Department of Health, 2008a; 2009, 2011a). Indeed, the spin-out survey conducted by the Transition Institute in 2013 identified these two particular policy initiatives as the most effective in growing the spin-out sector (Hazenberg et al., 2013).

There have also been other legislative changes introduced in recent years designed to effect the procurement and commissioning elements of public service delivery. The Localism Act 2011 (effective from April 2012) has provided opportunities for community groups to take over and run their local services (DCLG, November 2011). In addition, the passing of the Public Services (Social Value) Act into legislation (effective from January 2013) seeks to ensure that public procurement processes include provisions relating to social value (Teasdale *et al.*, 2012). Such policies do not, however, directly prioritise social enterprises or mutuals over other providers; although they may indirectly prioritise them by providing performance related contract provision that is aligned with the triple-bottom line (economic, social and environmental) of third sector organisations.

Nonetheless, the aforementioned marketisation of the public sector means that spin-outs must compete with private and third sector organisations for contracts to deliver services. This competition leads to spin-out organisations having to engage with a multitude of stakeholders to be able to successfully compete in the marketplace and often involves the development of partnerships with these stakeholders (for example service-users). The need to engage in partnership building also occurs internally with the engagement of the service

staff, which can include formally involving them in decision-making processes (Cabinet Office, 2011; Alcock et al., 2012; Miller et al., 2012a). This emphasis on partnership building means that a focus on multi-stakeholder partnerships is important in explaining the spin-out process.

2.3 – Partnerships in spin-outs

The focus on the Big Society and the need to create a robust and large civil society has meant that partnership formation and collaboration in the delivery of public services have become popular in recent years (Fenwick et al., 2012). A partnership is a non-hierarchical relationship (at least formally) that involves common ownership over problems and a commitment to improve the efficiency of the organisations involved (Coulter, 1999; Gallant et al., 2002). Partnerships can either involve a binding legal status that delineates set actions and outcomes (Rose, 1994) or can be based on more informal arrangements (Domberger et al., 1997). The main benefit of a partnership arrangement is that it provides mutually-reinforcing skillsets that can be utilised by partners in the collective solving of a problem, and as such partnerships are viewed as highly dependent relationships (Steijn et al., 2011). Prior research has also identified that partnerships allow multiple stakeholders to input into the running of the organisation (Roche, 2009).

In the UK partnerships have been used as a way to solve complex social problems, increase efficiency or develop more responsive public services (Hazenberg and Hall, In Press). However, partnerships are formed not only with other organisations but also with service-users. Cahill (1996) argues that partnerships with service users/clients are based on a continuum that ranges from 'involvement' through to 'partnership'. Whilst 'Partnership' is arguably where all public services should seek to aim in relations with their beneficiaries, such a goal is often an overly idealised state that can be impracticable with the day-to-day running of a public service. Prior research has also sought to explain partnerships in relation to their origins, processes and governance (see: Lober, 1997; McQuaid, 2000; Savas, 2000; Takahashi and Smutny, 2002; Steijn et al., 2011; Cornforth et al., 2013; Hazenberg and Hall, In Press). Indeed, Steijn et al. (2011) states that public/private partnerships are characterised by mutual coordination; shared risk and profit-making; and an organisational arrangement that facilitates such co-operation. These allow partnerships to make fiscal savings by

becoming more efficient (McQuaid, 2000; Savas, 2000); creating added value through the joint enhancement of products/services (Steijn et al., 2011); and greater innovation through shared skills and expertise (Parker and Vaidia, 2001; Huxham and Vangen, 2005). The features of partnerships outlined by the research described above are also characteristic of spin-outs and as such in attempting to understand spin-outs we should examine the partnerships that establish them.

Managing these partnerships over time is key to the success of a spin-out (Hazenberg and Hall, 2013; Hazenberg and Hall, In Press) with different stakeholders having fluctuating importance in the spin-out during its transition from the public to the third sector. In theorising this transition, Hazenberg and Hall (In Press) built upon prior research into partnership governance by Takahashi and Smutny (2002) and Cornforth et al. (2013) to develop a model of the spin-out process based upon research with local authorities (see Figure 2.1 below). In this model a variety of trigger streams provide a window of opportunity for a public service to spin-out from the public sector. These triggers include the social problem requiring intervention (problem); the policy frameworks currently in place such as 'Mutual Pathfinders' (policy); the contemporary environmental context such as the current global recession (political/social/economic) and impact of government austerity measures on public spending; and the relevant local authority being open to spin-outs ('organisation'). These triggers create the opportunity space for spin-outs that is then seized upon and led by the social entrepreneurs within the service. The social entrepreneurs negotiate with and utilise the skills of various stakeholders to create a partnership that eventually leads to the design and spinning-out of a public service that subsequently succeeds or fails. In this model Hazenberg and Hall (In Press) theorise that the organisation trigger (local/parent authority) is the most important in the decision to spin-out, but that this importance relative to the other trigger streams diminishes within the partnership as the spin-out transitions out and becomes increasingly independent.

Figure 2.1 – Organisational change in the spin-out of public services

Taken from Hazenberg and Hall (In Press).

2.4 – Summary

The prior research outlined has provided a theoretical overview of the spin-out sector in the UK (for more information see the 'Background' section of the Transition Institute's 2013 survey report 'The State of the Sector' available on the Transition Institute's website). This overview has identified that there are numerous triggers involved in the decision of whether to spin-out a public service and that these triggers are in flux over time. The research also identifies that once the decision to spin-out is made (and even before then) the importance of a multi-stakeholder approach to service design and delivery led by social entrepreneurs is crucial to the chances of success. However, there remains a gap in our knowledge of the relative importance of these stakeholders at different times in the journey, the role that service-users play and the types of nuanced outcomes that spin-outs encounter (over and above success or failure). This research sought to fill these gaps and to provide general data relating to the current state of the spin-out sector and its future needs.

Section 3 – Research aims and methodology

3.1 – Research aims

Based upon the literature outlined above and the survey conducted by the Transition Institute in 2013 the research study aimed to explore the following four main themes.

- What is the current state of the spin-out sector? Particularly in relation to organisational:
 - sector of operation
 - geographic reach
 - policy frameworks
 - turnover
 - profit margins
 - staffing
 - legal and governance forms.

- What are the key triggers for public services spinning-out? Particularly in relation to:
 - service closure/privatisation
 - budget cuts
 - service management/staff/users
 - political support/policy frameworks
 - service performance

- How important are different stakeholders on the spin-out process longitudinally? Particularly in relation to:
 - parent authorities
 - elected officials
 - service management
 - service staff
 - service users

- external experts
- What are the main issues that spin-outs feel should shape the future of the sector?
Particularly in relation to:
 - political support
 - access to finance
 - commissioning and contracting
 - research
 - policy frameworks
 - public awareness

3.2 – Research design and survey

The research adopted a quantitative methodology in which data was gathered from spin-out organisations through the completion of a survey by either an organisation's chief executive or other senior management staff. The survey was completed either online (n = 36 responses) or over the telephone (n = 30 responses). The survey was designed to capture data in relation to the research aims outlined in Section 3.1 and was in the field between November 2013 and March 2014, with the findings representing a snapshot of the spin-out sector between these dates.

3.3 – Participants

An intensive review of secondary data (website, online resources and publications) was conducted by staff at the Transition Institute in order to identify potential spin-out organisations that matched the Transition Institute's definition of a spin-out (see below). In total this review identified 201 organisations that were potential spin-outs, including housing associations and leisure trusts. An email explaining the purpose of the research and a link to the online survey was sent out to all of these organisations inviting them to participate. Follow-up emails were then sent to organisations that had not completed the survey and these were then followed up with telephone calls in order to further explain the purpose of the survey and to encourage participation. The survey invited the organisations

to self-define whether they were a spin-out organisation against the Transition Institute definition outlined below.

An organisation that has transitioned out of a public sector body to become an independent public service provider. Spin-outs tend to prioritise the maximisation of social value within their services and usually take the structure of a co-operative, mutual or social enterprise.

In total 66 organisations out of the 201 identified completed the survey. This gave a response rate of 32.84%¹ and of these 66 organisations, 28 had participated in the 2013 'State of the Sector' survey. This was an excellent return and a high response rate for survey-based research.

3.4 – Analysis

All questionnaire data was entered into Statistical Package for the Social Sciences (SPSS) version 20.0 and all analyses were conducted using this software. Descriptive statistics were sought from the data and relationships between the organisational demographic data captured were also explored using cross-tabulation chi-squared tests. Chi-squared tests were also used to explore the relationship between organisational variables and organisational perceptions of future challenges. The relationship between organisational demographics and scale variables (i.e. organisational staffing changes over time) were explored using one-way and two-way ANOVAs². Finally, bivariate correlations were also used to assess the relationships between factors relating to spin-out growth. These tests were used in order to explore the research data in relation to the four research questions outlined above in Section 3.1.

¹ Some respondents did not answer all the survey questions, so some analyses have a value of $N < 66$.

² Analysis of Variance (ANOVA) is a statistical test that is used to compare average scores (means) across more than two conditions (Field, 2009: 348).

Section 4 – Results

4.1 – Spin-out organisational data

As part of the survey, organisational demographic data was captured relating to the age of the spin-out and the organisation's sector and geographical scale of operation. An outline of this data is presented below in Table 4.1.

Category/Sub-category		N	Range	Mean
Age (months)		63	3-254	63.68
Category/Sub-category		N (Total)	N	Percentage
Sector	<i>Leisure</i>	66	21	31.8%
	<i>Health</i>		19	28.8%
	<i>Social care</i>		12	18.2%
	<i>Other</i>		5	7.6%
	<i>Employment</i>		3	4.5%
	<i>Education</i>		3	4.5%
	<i>Children & youth</i>		2	3.0%
	<i>Housing</i>		1	1.5%
Category/Sub-category		N (Total)	N	Percentage
Geographic scale	<i>Local</i>	66	29	43.9%
	<i>Regional</i>		25	37.9%
	<i>National</i>		6	9.1%
	<i>Multi-regional</i>		4	6.1%
	<i>International</i>		2	3.0%

NB. N < 66 as some questionnaire responses contained missing data.

The survey data reveals that the mean age of the spin-out organisation participants was nearly 64 months (5.3 years), although some organisations had existed since the early 1990s (the oldest organisation had been in existence for just over 21 years). A total of 47% of respondents operated in the health and social care sector, whilst a further 31.8% of the sample operated in the leisure sector. There were also a very small number of spin-out organisations in the children and youth services, employment, education, housing and 'other' sectors of public service delivery. The majority of respondents (81.8%) only operated at a local or regional level, which (as was identified in the 2013 survey) is understandable

given that many would have spun-out from local authorities, primary care trusts (PCTs) or NHS foundations.

Data was also captured from the participant organisations relating to their experience of the spin-out process. The data captured related to the originating parent authority, the policy framework followed in the spin-out (if any), the main triggers involved in spinning-out and the relative importance of various stakeholders at each stage of the spin-out process. This data is outlined below in Tables 4.2, 4.3 and 4.4.

Category/Sub-category		N (Total)	N	Percentage
Parent authority	1. Local authority	65	33	50.8%
	2. PCT		19	29.2%
	3. Central government		7	10.8%
	4. NHS Foundation Trust		3	4.6%
	5. Other		3	4.6%
Category/Sub-category		N (Total)	N	Percentage
Policy framework	1. None	66	30	45.5%
	2. Right to Request		18	27.3%
	3. Mutual pathfinders		11	16.7%
	4. Right to Provide		4	6.1%
	5. Other		3	4.5%

NB. N < 66 as some questionnaire responses contained missing data.

The data in Table 4.2 reveals that the majority of spin-outs had spun-out from local/regional bodies (84.6%), whilst nearly half had not followed any specific policy framework. Whilst this at first appears surprising it is in part related to the lack of spin-out policy frameworks prior to 2007 (RtR). If this is controlled for by excluding any organisations that spun-out prior to 2007 then the number of organisations not following a specific policy framework drops to only 20.5% (N = 44); hence, up to 4 out of 5 spin-outs happen as a result of a positive policy framework.

In relation to the 'triggers' for spinning-out, the participants were asked to rate the importance of each of the below 13 variables on a five-point Likert scale, ranging from 1 (no impact at all) through to 5 (very high impact). The results are presented below in Table 4.3.

Table 4.3 – Spin-out triggers

Trigger	N	Mean	SD
Service put out to tender	62	1.68	1.16
Service facing closure	64	2.27	1.44
Service restructuring	65	2.71	1.38
Budget cuts	63	3.21	1.42
Parent authority decision	65	3.05	1.58
Service management decision	63	3.37	1.38
Service staff decision	63	2.43	1.27
Service beneficiaries decision	65	1.91	1.20
Improve staff conditions	64	1.77	0.97
Policy framework	64	2.83	1.56
Government finance	63	2.63	1.34
Local political support	63	2.95	1.26
Service ineffective	60	2.18	1.21

NB. N < 66 as some questionnaire responses contained missing data. SD = Standard Deviation³.

The results shown above in Table 4.3 identify that the main triggers for spinning-out were budget cuts, a decision made by the parent authority and/or a service management decision. The need to restructure a service, the existence of policy frameworks and local political support also all scored highly.

In relation to the longitudinal importance of stakeholders in the spin-out process the participants were asked to rate the involvement of the parent authority, elected officials, service management, service staff, service-users and external stakeholders (e.g. consultancy firms) during the decision to spin-out, the design of the spin-out service, and in the strategic management of the spin-out. This allowed data to be captured in relation to the theoretical model proposed in Section 2 that provides an overview of the spin-out process (Figure 2.1 – Page 10). This was done utilising a five-point Likert scale that ranged from 1 (not involved at all) through to 5 (fully involved). Repeated measures ANOVAs were conducted to assess changes in the involvement of various stakeholders throughout the spin-out process in relation to strategic decision-making and the results are presented below in Table 4.4.

³ SD represents the measure of dispersion of the data away from the mean. In general a high SD means that the mean is less representative of the data (Field, 2009:39).

Table 4.4 – Stakeholder engagement

Stakeholder	N	Decision to spin-out	Design of spin-out	Strategic operation of spin-out	F
Parent authority	64	4.16	3.67	1.81	109.52 ***
Elected officials	64	3.16	2.64	1.87	26.29 ***
Service management	64	4.17	4.49	4.77	10.38 ***
Service staff	64	3.58	3.73	4.45	20.08 ***
Service-users	65	2.71	2.78	3.42	14.52 ***
External stakeholders	62	3.45	3.52	2.32	36.47 ***

NB. N < 66 as some questionnaire responses contained missing data. *** = $p < .001$. The scores at each stage are mean average values⁴.

The results outlined in Table 4.4 identify that the involvement of individual stakeholder groups throughout the spin-out process varied over time. During the decision to spin-out the parent authority and the service management were the most involved stakeholder groups. However, the parent authority's involvement in the spin-out declined over time ($p < .001$), whilst throughout the whole process the service management remained very involved ($p < .001$) and this level of involvement only increased once the service had spun-out. The same process also occurred for both the service staff ($p < .001$ - although their relative involvement was not as high as the service management) and service-users ($p < .001$ - although their involvement was less than the service staff). Finally, the involvement of external stakeholders such as consultancy firms also declined over time ($p < .001$).

The participants also provided information surrounding their sustainability in relation to their sources of income, turnover and profitability changes since leaving their parent authority. The participants were asked to provide turnover and profit margins as accurately as they could for both when they spun-out (Time 1) and the present time (Time 2). Participants were also asked to rank their income sources from 1 (main source of income) to 6 (least important source of income). An outline of this data is provided below in Table 4.5.

⁴ The F statistic identifies the ratio of the statistical model to its error, so the larger the F ratio the more variance there is in the mean scores (Field, 2009: 349).

Category/Sub-category		N	Mean		SD
Main sector of trade	1. Public	59	1.85		1.08
	2. Consumers	58	2.72		1.52
	3. Grants	56	3.05		1.74
	4. Private	52	3.67		1.61
	5. Third Sector	52	4.15		1.13
	6. Other SEs	50	4.92		1.07
Category/Sub-category		N	Mean at spin-out	Mean at present (2014)	Average change
Turnover (£)		51	£13.28m	£19.06m	+ £5.78m **
Category/Sub-category		N	Mean at spin-out	Mean at present (2014)	Average change
Profitability (£)		44	£169,356	£463,535	+ £294,179 **

NB. N < 66 as some questionnaire responses contained missing data. ** = $p < .01$.

The data in Table 4.5 shows that trade with the public sector remains the number one income source for spin-outs, with trade with consumers (i.e. personal budgets) and grant funding being the second and third most important. Interestingly, trade with other SEs or third sector organisations was the least important source of income on average for spin-outs. Paired sample t-tests were also conducted to assess the changes over time in organisational turnover and profitability since spinning-out. The results identify that on average spin-outs have increased their turnover by £5.78 million ($p < .01$) since spinning-out and that this has also led to an increase in profitability/surplus of £294.179 per annum ($p < .01$).

Data was also captured in relation to staffing levels. Paired-sample t-tests were undertaken to assess the longitudinal change in staffing levels since spinning-out for full-time, part-time and voluntary staff. An outline of this data is provided below in Table 4.6.

Category/Sub-category		N	Mean at spin-out	Mean at present (March 2014)	Average change
Staffing levels	Full-time	61	315.80	455.10	+ 139.30 (NS)
	Part-time	61	122.85	177.77	+ 54.92 (NS)
	Volunteers	57	42.63	74.58	+ 31.95**

NB. N < 66 as some questionnaire responses contained missing data. ** = $p < .01$; NS = non-significant.

The data provided in Table 4.6 identifies that on average spin-outs have considerably increased their staffing levels since spinning-out, with an average increase in staffing of 44.11% for full-time staff ($p = .14$); 44.70% for part-time staff ($p = .13$); and 74.94% for volunteer staff ($p < .01$). Whilst only the increase in volunteering was statistically significant, the data in Tables 4.5 and 4.6 suggests that spin-outs are substantially increasing their turnover, profit margins and staffing levels following spinning-out.

The respondents were also asked to provide data relating to their legal structure and governance model. This data is outlined below in Table 4.7.

Category/Sub-category		N (Total)	N	Percentage
Legal structure	1. CLG	65	25	38.5%
	2. CIC		22	33.8%
	3. CLS		8	12.3%
	4. IPS		8	12.3%
	5. Charity		2	3.1%
Category/Sub-category		N (Total)	N	Percentage
Governance model	1. BD with Community	64	26	40.6%
	2. BD with staff		16	25.0%
	3. BD External Stakeholders		11	17.2%
	4. BD (Management Only)		10	15.6%
	5. Shadow Board		1	1.6%

NB. N < 66 as some questionnaire responses contained missing data. CLG = company limited by guarantee; CLS = company limited by shares; CIC = community interest company; IPS = industrial provident society; BD = Board of Directors.

The data in Table 4.7 demonstrates that the majority of spin-outs classed themselves as either CLG or CLS organisations (50.8%), whilst those adopting the CIC organisation form increased from 2013 levels (11.6%) to 33.8% of all organisations sampled. Interestingly and unlike the data from the 2013 survey, the number of boards that involved the community (i.e. beneficiaries) had increased from 10.4% to 40.6% of respondents. This data suggests that new or existing spin-outs are adopting or changing to the CIC legal form and also adopting more open governance structures.

Data was also captured in relation to key organisational concerns, opinions of commissioning frameworks and of the impact that the Public Services (Social Value) Act would have on

commissioning. The respondents were asked to state their level of concern in relation to six statements on a five-point Likert scale ranging from 1 (not worried at all) through to 5 (it is my main concern). The participants were also asked to rate the commissioning framework's 'fit' with public service mutuals on a five-point Likert scale (1 = it does not capture it at all; 5 = it completely captures it); as well as their opinion of how much the Public Services (Social Value) Act would impact commissioning (1 = none; 5 = it will transform it). The data for this is displayed below in Table 4.8.

Table 4.8 – Key spin-out concerns and commissioning framework 'fit'						
Q: How would you value some of the challenges faced by current and prospective spin-outs?						
Statement	N	Not worried at all	A bit worried	Worried	Very worried	It's my main concern
1. Tendering under a PbR scheme	60	43.3%	30.0%	20.0%	5.0%	1.7%
2. Securing contracts	60	16.7%	26.7%	21.7%	16.7%	18.3%
3. Access to finance	61	24.6%	39.3%	11.5%	18.0%	6.6%
4. Measuring your social impact	61	49.2%	36.1%	9.8%	4.9%	0%
5. Transfer of personnel	62	46.8%	33.9%	9.7%	6.5%	3.2%
6. Consolidation and growth	61	27.9%	31.1%	13.1%	19.7%	8.2%
Q: To what extent do you consider that the current commissioning framework captures the potential for public service delivery of spin-outs?						
N	It does not capture it at all	It captures it a little	It captures it a fair amount	It captures it a lot	It captures it completely	
57	24.6%	49.1%	17.5%	8.8%	0%	
Q: To what extent do you think the Public Services (Social Value) Act 2012 will change commissioning practices in favour of spin outs?						
N	None	A little	A fair amount	A lot	It will transform it	
57	8.8%	56.1%	22.8%	10.5%	1.8%	

NB. N < 66 as some questionnaire responses contained missing data.

The data displayed above in Table 4.8 shows that securing contracts was the most significant worry for spin-outs (mean value = 2.93) followed by consolidation and growth (mean value = 2.49) and access to finance (mean value = 2.43). Interestingly, nearly three-quarters of respondents believed that the commissioning framework captured the potential for Public Service Mutuals either 'a little' or 'not at all', whilst over half felt that the Social Value Act would have limited impact on commissioning.

Participants were also asked to rate the impact that spinning-out from the public sector had had upon their services in relation to the five statements below ranging from 1 (a lot worse) through to 5 (a lot better). The data below in Table 4.9 outlines the findings from this.

Table 4.9 – Key spin-out concerns and commissioning framework ‘fit’

Q: How would you value some of the challenges faced by current and prospective spin-outs?						
Statement	N	A lot worse	A little worse	The same	A little better	A lot better
1. Financial success	63	3.2%	3.2%	7.9%	28.6%	57.1%
2. Staff engagement	62	0%	3.2%	6.5%	32.3%	58.1%
3. Service-user engagement	63	0%	1.6%	11.1%	39.7%	47.6%
4. Service reputation	62	0%	1.6%	4.8%	29.0%	64.5%
5. Measuring your social impact	62	0%	0%	8.1%	32.3%	59.7%

NB. N < 66 as some questionnaire responses contained missing data.

The data in Table 4.9 suggests that service performance and quality has significantly improved since spinning-out. The respondents stated that their service had improved its financial performance (85.7%); staff engagement (90.4%); service-user engagement (87.3%); service reputation (93.5%); and in measuring social impact (92%). However, caution needs to be applied to these findings as they involve senior managers of the spin-outs in question rating their own performance. Whilst the financial data outlined earlier would seem to bear out the statements made here in part, further research that explored these findings with service staff and service-users would be very beneficial.

Finally, the participants were asked what they would like to see in political parties General Election manifestos for 2015. This was done on a yes/no basis against the following seven statements. Table 4.10 outlines the findings.

Table 4.10 – Key spin-out concerns and commissioning framework ‘fit’

Q: How would you value some of the challenges faced by current and prospective spin-outs?			
Statement	N	Yes	No
2. More concrete support in the commissioning process for spin-outs	63	87.3%	12.3%
3. More political support for spin outs	59	84.1%	15.9%
4. More access to public funding for spin outs	64	76.6%	23.4%
5. More awareness in the public domain about spin outs	63	76.2%	23.8%
6. Development/promotion of policy frameworks	61	57.4%	42.6%
7. Development of road maps/toolkits for spinning out	63	50.8%	49.2%
8. More research into spinning out	62	41.9%	58.1%

NB. N < 66 as some questionnaire responses contained missing data.

The data in Table 4.10 identifies that the main areas that spin-outs want to see addressed are in relation to political support for spin-outs and more concrete support in the commissioning process. There was also support from around three-quarters of spin-outs for increased access to funding and a campaign to raise public awareness of spin-outs. Disappointingly for the author, nearly 60% of respondents did not think that further research into the sector was necessary!

4.2 – Relationship analysis

One-way ANOVAs were conducted in order to explore the relationship between ‘Main Sector of Trade’ (e.g. health), ‘Geographical Scale of Operation’ (e.g. local), ‘Policy Framework Adopted’ (e.g. RtR), ‘Organisational Legal Form’ (e.g. CIC) and ‘Governance Structure’ (e.g. board with staff representation), with changes in staffing, turnover and profitability. No statistically significant relationships were identified, suggesting that these were not important factors in shaping organisational growth.

The data from the 2013 survey had suggested that there was a link between the ‘Main Sector of Trade’ and growth in staffing levels. The 2014 survey had captured additional data in this area that broke staffing levels down into full-time and part-time staff, as well as volunteers. In addition, data was also captured relating to changes in turnover and profitability, which allowed for analysis to be conducted into the relationship between main sector of trade and these three variables. One-way ANOVAs were conducted to explore these relationships and Figures 4.1, 4.2 and 4.3 below outline the results.

Figure 4.1 – Staffing change over time by main sector of trade

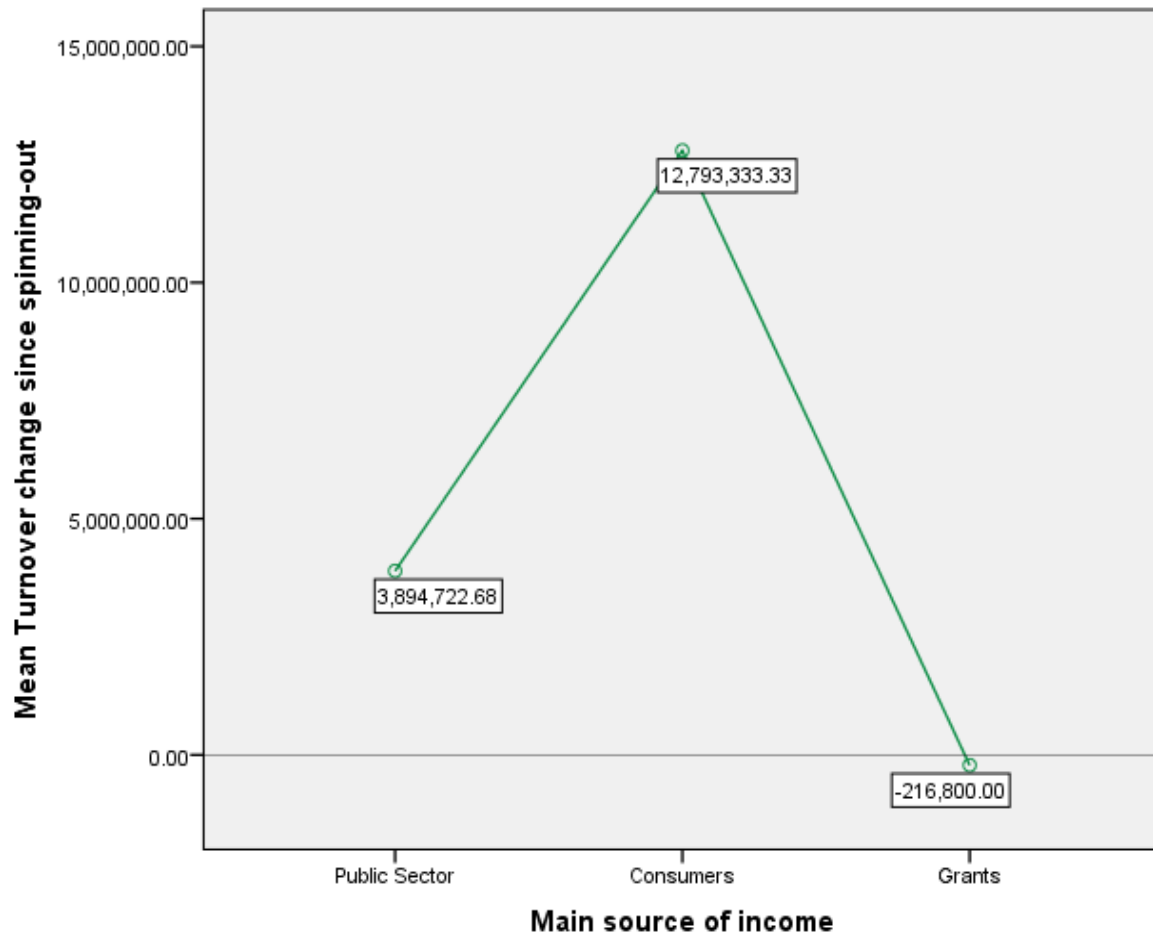

Key: ■ = FT Staff; ■ = PT Staff; ■ = Volunteers. NB. Organisations that trade with the private or third sectors were excluded from the analysis due to low sample numbers ($N > 5$).

Figure 4.1 illustrates that there was a relationship between the main sector of trade and growth in staffing levels, with spin-outs whose main source of income was from consumers having an average increase in staff (including volunteers) of 732. This compared with only 62.26 and 76.86 for those spin-outs that sourced their main income from trade with the public sector or grants respectively. However, caution needs to be applied here as the relationships for FT staff ($p = .31$; $N = 52$) and PT staff ($p = .22$; $N = 52$) were insignificant. In relation to volunteers the relationship was significant ($p < .05$; $N = 49$).

This analysis was repeated for changes in organisational turnover levels since spinning-out. Figure 4.2 below outlines the findings of this analysis.

Figure 4.2 – Turnover change over time by main sector of trade

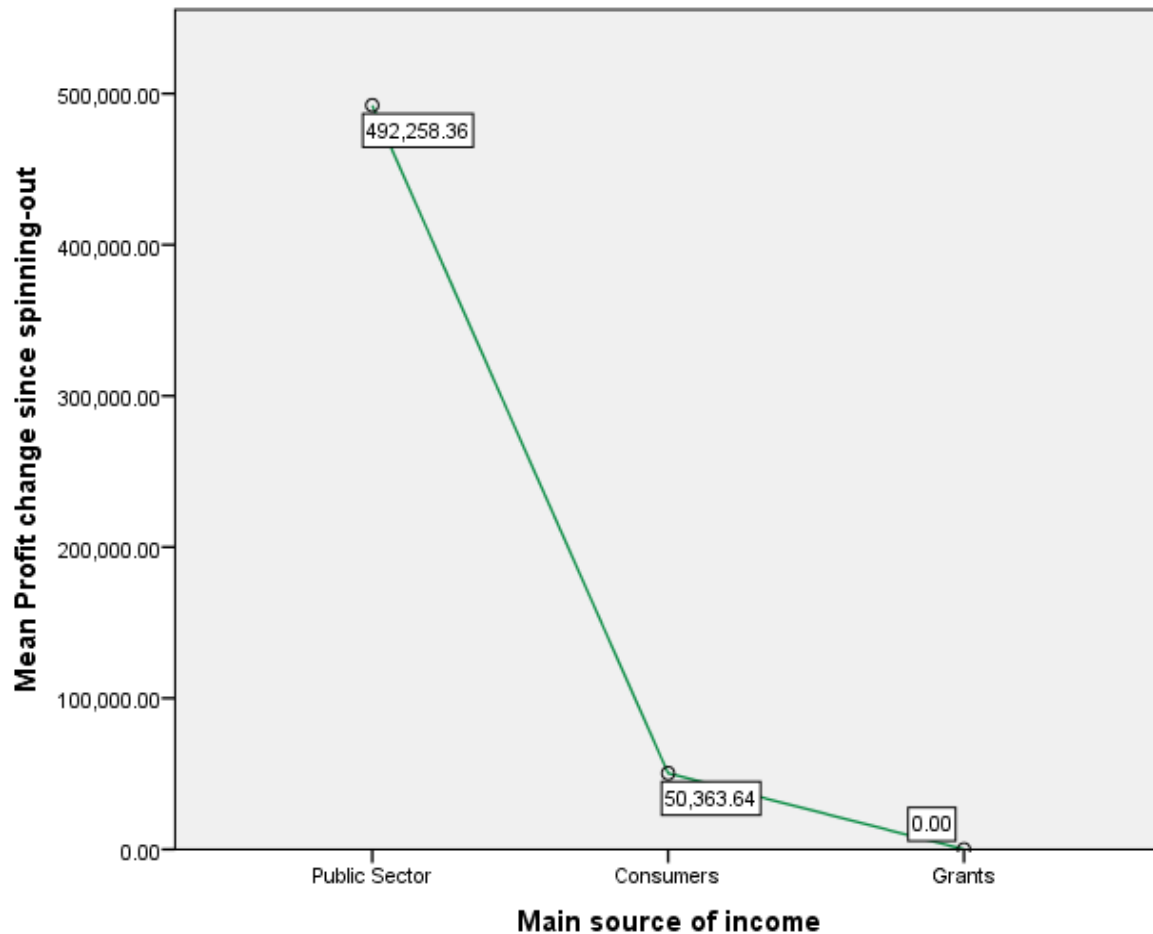

NB. Organisations that trade with the private or third sectors were excluded from the analysis due to low sample numbers ($N > 5$).

The results identified in Figure 4.2 show that spin-outs whose main source of income came from consumers had experienced greater turnover growth (+ £12.79 million) than spin-outs for whom the main source of income was public sector contracts (+ £3.89 million), or indeed grants (- £216,800) that had actually lost money. However, this relationship was not statistically significant ($p = .26$; $N = 45$) so caution needs to be applied when viewing these results.

This analysis was then repeated for changes in organisational profit levels since spinning-out and the results are presented below in Figure 4.3.

Figure 4.3 – Profit change over time by main sector of trade

NB. Organisations that trade with the private or third sectors were excluded from the analysis due to low sample numbers ($N > 5$).

Interestingly, and unlike the data outlined above in Figures 4.1 and 4.2, the analysis demonstrated in Figure 4.3 reveals that spin-outs whose main income came from the public sector had the largest profitability increase since spinning out (+ £492,258.36), compared with those spin-outs who derived the majority of their income from consumers (+ £50,363.64) or grants (no increase). This relationship was nearly statistically significant ($p = .05$; $N = 40$).

Bivariate correlational analysis was also undertaken in order to explore the relationships between organisational changes in staffing, turnover, profit levels and the length of time since spinning-out. The results are displayed below in Table 4.11.

Table 4.11 – Correlations for age and growth

Factor	Statistic	Age	FT Staff	PT Staff	Vol. Staff	Turnover	Profit
Age	<i>r</i>	1.000	.203	-.036	.356**	.462**	-.162
	<i>N</i>	63	58	58	55	48	41
FT Staff	<i>r</i>	.203	1.000	.271*	.376**	.531**	.251
	<i>N</i>	58	61	61	57	50	43
PT Staff	<i>r</i>	-.036	.271*	1.000	.346**	.100	.204
	<i>N</i>	58	61	61	57	50	43
Vol. Staff	<i>r</i>	.356**	.376**	.346**	1.000	.367*	-.002
	<i>N</i>	55	57	57	57	47	40
Turnover	<i>r</i>	.462**	.531**	1.000	.367*	1.000	.458**
	<i>N</i>	48	50	50	47	51	44
Profit	<i>r</i>	-.162	.251	.204	-.002	.458**	1.000
	<i>N</i>	41	43	43	40	44	44

NB. $N < 66$ as some questionnaire responses contained missing data. * = $p < .05$; ** = $p < .01$.

The results identified in Table 4.11 show that turnover was the most important factor in driving growth, and that it was positively correlated with organisational age ($r = .462$; $p < .01$). In addition, turnover drove staffing increases as it was positively correlated with changes in full-time staffing levels ($r = .531$; $p < .01$); and voluntary staffing levels ($r = .367$; $p < .05$). Unsurprisingly, increases in turnover were positively correlated with profit-levels ($r = .458$; $p < .01$), whilst changes in part-time staffing levels were also correlated with changes in full-time staffing levels ($r = .271$; $p < .05$). Finally, there was a positive correlation between organisation age and voluntary staffing levels, suggesting that the older a spin-out became, the more they utilised voluntary staff ($r = .356$; $p < .01$).

Analysis was also undertaken to explore the relationship between income and organisational perceptions of the challenges that they faced. Cross-tabulations using the chi-squared test were undertaken to explore the relationship between main source of financial income and the potential future organisational challenges listed below. Participants were asked to rate how concerned they were about the six proposed future challenges on a five-point Likert scale ranging from 1 (not worried at all) to 5 (it is my main concern). The only statistically significant result was in relation to access to finance. The results of this analysis are outlined below in Table 4.12.

- Challenge of PbR contracting.
- Challenge of securing future contracts.
- Access to finance.

- Measuring social impact.
- Transfer of personnel.
- Consolidation and growth.

Table 4.12 – Access to Finance

Main Sector of Income	N	Not worried at all (%)	A bit worried (%)	Worried (%)	Very worried (%)	It is my main concern (%)
Public Sector	29	37.9	41.4	0.0	20.7	0.0
Private Sector	4	25.0	75.0	0.0	0.0	0.0
Third Sector	1	0.0	100.0	0.0	0.0	0.0
Grant Funding	6	0.0	33.3	66.7	0.0	0.0
Consumers	18	16.7	27.8	16.7	22.2	16.7

NB. N = 58; any *p* values reported are based upon Fisher's Exact test due to the small sample size.

The data in Table 4.12 shows that those spin-outs for whom the main source of income was from consumers were the most worried in relation to access to finance, with 38.9% of organisations being at least 'very worried'. This compared with those spin-outs whose main source of income was from the public sector (79.3%), third sector (100%) and private sector (100%) being no more than 'a bit worried'. This result was statistically significant ($p < .01$).

Finally, cross-tabulations using the chi-squared test were undertaken to explore differences between different sectors of operation and the needs and wants specified by spin-outs in relation to the parties' General Election manifestos. Statistically significant results were identified in relation to 'public funding commitments' and 'commissioning reform'. Tables 4.13 and 4.14 below outline these findings.

Table 4.13 – More Public Funding

Agree	Leisure (%)	Health (%)	Social (%)	Housing (%)	Children & Youth (%)	Education (%)	Employment (%)	Other (%)
Yes	100.0	64.7	75.0	100.0	50.0	33.3	66.7	60.0
No	0	35.3	25.0	0	50.0	66.7	33.3	40.0

NB. N = 64; any *p* values reported are based upon Fisher's Exact test due to the small sample size.

Table 4.14 – Commissioning Reform

Agree	Leisure (%)	Health (%)	Social (%)	Housing (%)	Children & Youth (%)	Education (%)	Employment (%)	Other (%)
Yes	95.2	94.1	90.9	100.0	50.0	66.7	33.3	80.0
No	4.8	5.9	9.1	0.0	50.0	33.3	66.7	20.0

NB. N = 58; any *p* values reported are based upon Fisher's Exact test due to the small sample size.

The results in Table 4.13 identify that the issue of increased public funding for spin-outs splits the sector depending upon which area they operate in. For instance, at least 75% of spin-outs operating in the leisure, social care, and housing sectors wanted more public funding; whilst only 50% of children and youth spin-outs and 33.3% of education spin-outs wanted the same. This result was statistically significant ($p < .01$). Finally, the results shown in Table 4.14 demonstrate that there was also sectorial difference in relation to commissioning reform, with spin-outs operating in the leisure, health, social care and housing sectors being more supportive of reform than those operating in the children and youth, education and employment sectors ($p < .01$). However, caution needs to be heeded with these results due to the low sample-size and cell counts.

Section 5 – Discussion

The data analysis revealed some interesting findings in relation to the state of the spin-out sector in 2014, which offered support to the findings of the previous ‘State of the Sector’ survey in 2013. The on-going dominance of the leisure, health and social care sectors has continued into 2014, with 78.8% of spin-out respondents emerging from these sectors (2013 levels - 79.6%). As was noted last year, this is unsurprising considering the policy frameworks that have existed in these sectors, particularly the RtR and RtP initiatives. These results suggest public funding initiatives and policy frameworks can be very beneficial in driving the development of spin-outs (Hazenberg, 2013). The small number of spin-out respondents from the education, employment, housing, and children and youth sectors also points to a need to develop awareness (both politically and publically) of spin-outs in other service areas (Burns, 2012). In addition, the average age of the spin-out organisations was just over 5 years, an increase from the previous results of 6 months (understandable given that half of the 2013 respondents also contributed to this survey). This year-on-year growth and survey retention also demonstrates that many spin-outs are surviving their transition out of the public sector and becoming sustainable. This has political and economic implications for public services exploring spinning-out, particularly non-statutory services that otherwise might face privatisation or closure.

Over four-fifths of the spin-outs (81.8%) operated at a local or regional level. Again, and as was noted in last year’s survey this is understandable considering that most of the spin-outs (83.8%) had spun-out of Primary Care Trusts, NHS Foundation Trusts and local authorities. In an almost identical result to the 2013 survey (45.3%), 45.5% of respondents had not followed any specific policy framework in spinning-out (Hazenberg, 2013). However, this result was skewed by the high proportion of leisure spin-outs ($N = 21$) that participated in the study, many of whom had spun-out in the 1990s before any policy frameworks existed in relation to spin-outs. Indeed, when these organisations were removed from the dataset the number of organisations that spun-out without any policy assistance dropped to just over 20%. As was noted above, this suggests that the awareness of policy frameworks is generally good, but that more could be done to ensure that all public sector staff are aware of their

service delivery options (Burns, 2012). For those spin-outs that had followed a policy framework in spinning-out, over 90% had done so through the RtR, RtP and Mutual Pathfinders policy programmes, which lends support to prior research that identified the importance that intensive political and financial support can have in this area (Miller *et al.*, 2012a).

In relation to the 'triggers' for spinning-out, the survey data reveals that the most important factors in driving spin-outs were budget cuts, or a decision from the parent authority or service management. Perhaps surprisingly the threat of a service being put out to tender had not driven decisions to spin-out and nor had demand from service beneficiaries. This latter point is interesting as it suggests that decisions to spin-out are not made by service beneficiaries and offers support to prior research that questioned how much service beneficiaries are really engaged in the spin-out process (Simmons, 2008). However, the relative importance of and engagement of different stakeholders throughout the spinout process substantially changed over time, with parent authorities and elected officials becoming less important, whilst service staff and service-beneficiaries became increasingly important the further along the spin-out 'journey' the service was ($p < .001$).

This suggests that the prior research by Simmons (2008) and the data from last year's survey (Hazenbergh, 2013) that questioned the *de facto* involvement of service-users are not entirely accurate. Indeed, the situation is more nuanced than this. Beneficiaries and to a lesser extent service staff are less involved (or excluded) in the decision to spin-out, but once this decision is made they are increasingly involved in strategic decision-making. This offers support to prior research that identified the importance of engaging service staff but suggests that this need (and *de facto* engagement) may be in flux (Cabinet Office, 2011; Alcock *et al.*, 2012; Miller *et al.*, 2012a). Unsurprisingly, throughout the whole process of spinning-out, the service management remain the key decision-makers. However, the involvement of multiple stakeholders at different stages of the spin-out process demonstrates that spin-outs are operating as partnerships (Roche, 2009). Figure 5.1 below illustrates this.

Figure 5.1 – Stakeholder involvement in the spin-out journey

Key: SMT = Senior Management Team; LA = Local Authority; SU = Service-users; [dotted box] = Policy window.

Adapted from Hazenberg and Hall (In Press).

Figure 5.1 illustrates an adaptation to the model of the spin-out propose as originally proposed by Hazenberg and Hall (In Press). In this model Hazenberg and Hall (In Press)

propose that whilst wider macro-economic and socio-political factors influence the decision to spin-out, the final decision is driven by a number of 'triggers' that provide the 'collaborative window' of opportunity for social entrepreneurs within the public service to spin-out. This all takes place within a 'policy window' (Kingdon, 1995) in which policy frameworks exist that facilitate this type of collaborative action. The creation of these frameworks is often driven by wider exogenous factors (i.e. recessions and spending cuts) (Gray, 1989). The model also proposed that once this decision had been made, the parent authority and the triggers that drove the decision to spin-out became less important over time (Hazenberg and Hall, In Press). The data gathered in this research study suggests that the key triggers for most spin-outs are decisions made by parent authority and service management teams, which are often driven by budget cuts. Secondary to this the importance of existing policy frameworks (policy windows) and local political support for spinning-out are also important. The data also offers support to the model proposed by Hazenberg and Hall (In Press) by suggesting that the importance of the parent authority diminishes over time and that the key stakeholders within the spin-out become the service staff and beneficiaries, alongside the management. However, the degree to which service staff and particularly service-users become partners as opposed to merely being involved remains unclear (Cahill et al., 1996).

As in 2013, the survey data around trade income was very interesting and demonstrated that the primary source of income for the majority of spin-outs was the public sector through contracts. This was then followed by direct trade with consumers and grant funding. The figures in relation to turnover and profit making were also extremely insightful and demonstrated that the spin-out sector as a whole was in growth. Average turnover had increased since spin-out by £5.78 million ($p < .01$) and profit margins since spin-out had increased by an average of £294,179 ($p < .01$). This demonstrates that spin-outs have significantly grown their turnover since spin-out, at an average rate of +43.52%. When the average age of the spin-outs is taken into account (5.31 years) this represents an annual growth rate of 8.2%. Crucially, they are also delivering this turnover growth profitably. This growth in turnover and profits has also driven recruitment at the spin-outs, with an average increase in staffing (FT, PT and volunteers) of +234.04 persons. This was split between FT staff (+139.30, +44.11%), PT staff (+54.92, +44.70%) and volunteers (+31.95, +74.94%, $p < .01$). Whilst only the growth in volunteering was statistically significant, it still represents a

relatively large increase in employment per organisation of +66.86%. Unsurprisingly, analysis of the data also revealed that the age of a spin-out was a key determinant of the level of growth experienced, as it was positively correlated with turnover and voluntary staffing growth ($p < .01$).

The 2013 survey data had also suggested that those spin-outs that primarily sourced their income from consumer trade experienced higher growth than their counterparts (Hazenberg, 2013). The 2014 data in part backed this up, with consumer-trading spin-outs experiencing higher growth in FT staffing, PT staffing and volunteer staffing. However, only the latter relationship was statistically significant ($p < .05$). Consumer-trading spin-outs also delivered higher growth in turnover than their counterparts whose main income was derived from the public sector or through grant funding, with growth of +£12.79 million compared to public-trading (+£3.89 million) and grant-funded spin-outs (-£216,800). However, again this relationship was non-significant and so caution needs to be exercised in interpreting these results. However, contrary to the results outlined above it was those spin-outs that traded primarily with the public sector that experienced the greatest growth in profits (+£492,258), compared with consumer-trading spin-outs (+£50,364) and grant funded spin-outs that had delivered no profit increase ($p = .052$). It is difficult to explain why there may be this difference in growth for spin-outs with different primary income models. However, the much larger (and profitable) growth in turnover for consumer-trading spin-outs *suggests* that the need to be more demand-focused leads to greater service and income growth (and hence employment creation). However, this is only an assumption based upon non-statistically significant trends in the data.

The survey also captured data from participants about their legal structures and governance arrangements. The vast majority of spin-outs (84.6%) had adopted a company legal form (CLG, CLS or CIC). Whilst there was a growth in the number of organisations adopting the Social Enterprise specific legal form (CIC) from 24.5% (2013) to 33.8% (2014) this still represented only one-third of the sample, and suggests that the CIC legal form is not adopted by the majority of spin-outs (LGG, 2011). Whilst the 2013 survey had identified a distinct lack of beneficiary engagement at board level (10.4%), the current survey identified a growth in the number of boards that had service-user involvement (40.6%). In attempting to ascertain whether this was due to the new 2014 sample (only 42.42% had participated in

the 2013 survey), analysis was conducted on only those spin-outs that had participated in the 2013 survey ($N = 28$). The results identified that beneficiary involvement at board level had grown from 7.7% to 42.9%, suggesting that there had been a significant shift in governance structures at these organisations over the previous 12 months. This offers support to the model proposed by Hazenberg and Hall (In Press) and refined in this paper that service-user engagement increases as the spin-out matures. The result could also be related to a growing perception amongst spin-out management and staff that service-user engagement is important. It will be interesting to see in future years whether this trend continues.

The respondents were also surveyed about their concerns for the future in six areas. These were:

- PbR contracting
- the challenge of securing future contracts
- access to finance
- measuring social impact
- the transfer of personnel
- consolidation and growth

Finally, compared to the 2013 survey results there had been a shift away from concern about PbR contracting towards consolidation and growth, securing contracts and access to finance. This effectively shows that spin-outs are concerned about sustainability and their position in the market and offers support to prior research conducted in this area that identified similar trends (Hall *et al.*, 2012b; Tribal, 2009; Miller and Millar, 2011). These findings were also supported by the data relating to spin-out 'needs and wants' in 2015 General Election manifestos. The majority of spin-outs (75%+) were keen to see more support for spin-outs in commissioning (access to contracts) and more public funding for spin-outs (access to finance), as well as more political support for the spin-out sector.

Section 6 – Spin-out needs and wants

Based upon the discussion outlined above, the following three policy recommendations are proposed as a means of promoting the growth and sustainability of the spin-out sector. These are the key interventions requested by the spin-out sector in order for the sector to continue to grow and prosper.

1. **UK Election 2015:** Spin-outs would like to see more concrete support for the sector appearing in the election manifestos of political parties in the run-up to the 2015 General Election. Specifically, the sector feels that there needs to be manifesto commitments to:
 - i. **Commissioning reform** so that spin-outs can compete on a level playing field.
 - ii. **Political support** for the spin-out sector and a commitment to innovation within the delivery of public services.
 - iii. **Public Funding** streams for spin-outs in order to grow the sector, similar to the ‘Social Enterprise Investment Fund’ (SEIF) that operated in the health and social care sectors.
2. **Access to finance:** This remains a key concern for spin-out organisations, who often find it difficult to secure social or private sector investment due to a lack of track record, high balance sheet liabilities (e.g. pensions) and income sources that are not diverse. Support to assist spin-outs to become more investment ready is needed. However, there also needs work to be done on the supply-side to ensure that investors are more open to investing in the sector.
3. **Partnerships:** As this research and prior research has identified, spin-outs operate as partnerships and multi-stakeholder collaborations. Policy frameworks, roadmaps and toolkits that acknowledge this will greatly assist the ‘social entrepreneurs’ within public services to gain support for spinning-out their service and in achieving sustainably for their spin-out.

Section 7 – Summary

The spinning-out of public services in the UK presents one of the largest changes to UK public service delivery in the past two decades. Spin-outs are viewed as offering the potential to increase stakeholder participation; improve the breadth and quality of service delivery; reduce staff turnover levels; drive innovation in service design; and lead to more dynamic organisational decision-making structures (Addicott, 2011; Alcock *et al.*, 2012; Cabinet Office, 2011; Hall *et al.*, 2012b; Social Enterprise Coalition, 2011). However, to date there has been only limited research conducted that seeks to test these assumptions. The research outlined in this report has identified that the spin-out sector is experiencing sustainable growth in relation to turnover, profits and staffing levels. Indeed, this growth is driving both increased service provision and employment, which is being delivered at local and community levels. However, this is not to suggest that the spin-out sector does not face challenges. Indeed, the participants in this research identified a number of serious concerns relating to the future sustainability of the sector and felt that action was needed to remedy them. These include:

Table 7.1 – Needs and Wants

<i>Concern</i>	<i>Solution</i>
1. Commissioning frameworks and their suitability for treating spin-outs fairly	<ul style="list-style-type: none"> The reform of commissioning to reflect the unique situation of spin-outs. A more robust interpretation of the Public Services (Social Value) Act.
2. Access to finance both in securing contracts and seeking investment	<ul style="list-style-type: none"> Public funds to be introduced (similar to the SEIF) to support the sector. Greater understanding from social investors of the needs of the spin-out sector.
3. A lack of perceived political support for spin-outs	<ul style="list-style-type: none"> Increased recognition of the innovation being delivered by spin-outs. Increased public awareness.
4. The time taken to become sustainable and deliver growth	<ul style="list-style-type: none"> Recognition that turning a public service into a sustainable, commercial proposition takes time. Introduction of commissioning frameworks that understand this.

The research also identified that spin-outs appear to operate as partnerships and/or multi-stakeholder collaborations and that the importance of various stakeholders changes over time. This has important implications for those public services exploring the option of spinning-out as it provides a potential roadmap of the partnerships that they should be forming at different stages of the process, and the importance of different triggers in creating and driving the opportunity to spin-out. Finally, this survey provides useful evidence of the 'needs and wants' of the spin-out sector in 2014 and builds upon the work done by the Transition Institute and the University of Northampton in 2013. Whilst the sample-size is small⁵, the survey did capture information from around one-third of the sector and so provides useful insights into the ongoing development of spin-outs in the UK.

⁵ In statistical terms 66 participants is a small sample and so some caution should be exercised when seeking to generalise the findings of this research.
