

Cruise Report

Compiled by: Dr. Jan Dierking

R.V. Alkor

Cruise No.: AL 413

Dates of Cruise: 13.04. – 27.04.2013

Areas of Research: Physical, chemical, biological and fishery oceanography

Port Calls: Gdynia, Poland 19. – 21.04.2013

Institute: GEOMAR, FB3 (Marine Ecology, Evolutionary Ecology of Marine Fishes)

Chief Scientist: Dr. Jan Dierking

Number of Scientists: 12

Projects: CAVIAR, BIOACID II, POPDYN, BONUS, Fisheries Induced Evolution, Cod genome scan, others

Cruise Report

This cruise report consists of 19 pages including cover:

1. Scientific crew.....	2
2. Research programme.....	3
3. Narrative of cruise with technical details.....	4
4. Scientific report and first results.....	6
5. Scientific equipment	10
6. Acknowledgements.....	10
7. Appendix A: Station list.....	11

2. Research programme

This multidisciplinary cruise extended a long-term data series on (eco-) system composition and functioning of the Baltic Sea, with a focus on the deeper basins. The series has been collected in similar form since 1986 by the Helmholtz Centre for Ocean Research Kiel GEOMAR (former IFM-GEOMAR Kiel, former IfM Kiel), and provides measurements and samples for several ongoing and scheduled projects. A key characteristic of the cruise is the integration of oceanographic and biological information to enhance understanding of environmental and (fish) population fluctuations, and evolutionary processes in this system. The spatial focus lay on the Bornholm Basin (the most important spawning area of Baltic cod), but also included the Arkona and Gotland Basin and Gdansk Deep (Figure 1).

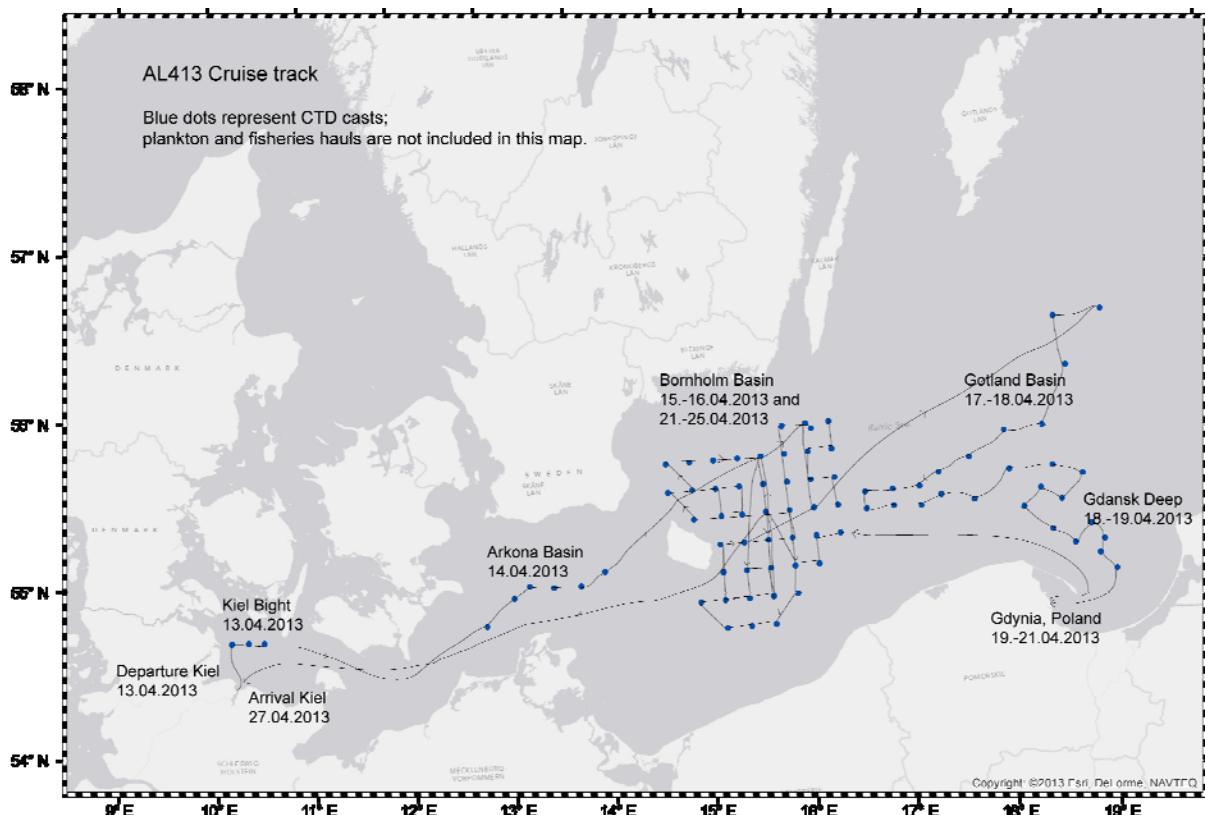

Figure 1 Cruise track of AL413. Blue circles denote CTD casts.

Specific investigations included a detailed hydrographic survey (oxygen, salinity, temperature, pH) of the Bornholm Basin (Figure 1), plankton surveys (zoo- and ichthyoplankton, with the goal to determine the composition and the abundance and vertical and horizontal distribution of species, and to take samples for later measurements of nutritional condition) (Figure 2), and pelagic fishery hauls for clupeid and gadoid fish (Figure 3, Table 1). The latter served to determine stock structure, gonadal maturation and egg production of sprat and cod, and to sample tissue for later genetic analyses and otoliths for age measurements of cod. The abundance and distribution of fish species in the investigated area was also assessed with hydroacoustic methods.

One additional component of the cruise were egg buoyancy experiments with flatfishes and cod and included the fertilization of eggs on board and measurements in density columns. This workline stood in the context of projects on mortality factors of early life stages, the role of ecological processes in the evolution of stock structure, and evolutionary selection pressures in Baltic fish species.

3. Narrative of cruise with technical details

Cruise AL 413 successfully accomplished all work and objectives that had initially been set, benefiting from good weather conditions and equipment that was functioning smoothly.

RV Alkor departed from GEOMAR pier as scheduled on April 13 2013 06:00 (all times UTC) heading to the first research area in the Kiel Bight. Over the duration of the cruise, hydroacoustic data obtained with four different echosounder frequencies (38, 70, 120 and 200 kHz) were continuously recorded. Station work started at 08:24, consisting of CTD, Bongo, Multinet MIDI (towed), Helgoländer Larvennetz, and pelagic fishery hauls in the Kiel Bight (April 13) and Arkona Basin (April 14), before transferring to Bornholm Basin. For the remainder of the cruise, following fishery hauls from which both ripe males and females of the same species were available, buoyancy experiments with fertilized eggs of flatfishes and cod were done. Similarly, following multinet MIDI or Helgoländer Larvennetz deployments from which developing cod eggs from the wild were recovered, buoyancy measurement with these eggs were done.

Station work in the main research area Bornholm Basin started on April 15 at 03:59 with fishery, CTD and Helgoländer larvae net hauls, followed by a 50 mile hydroacoustic and towed CTD transect during nighttime. Over the following 4 days, station work included CTD, Bongo (West of Stolpe trench)/IKS-80 (East of Stolpe trench), and pelagic fishery hauls in Bornholm Basin (April 16), Gotland Basin (April 17), Stolpe trench (April 18), and Gdansk Deep (April 19) during daytime and CTD and Bongo/IKS-80 hauls during nighttime. After completing the station grid in Gdansk Deep, RV Alkor entered Gdynia harbor on April 19 at 17:00. After debarking one scientist as scheduled on the morning of April 21, the vessel left port at 07:30 and steamed for Bornholm Basin. From April 21 17:40 until April 23 01:30, the Bornholm Basin station grid was covered with Bongo and CTD casts. In addition, on one station, the water sampler was deployed to obtain oxygen measurement with the Winkler method. The remaining pelagic fishery stations in Bornholm Basin were covered during the daytime, whereas the remaining stations of the Bongo and CTD grid were covered during nighttime of April 23 to 25.

Finally, from April 25 17:35 until April 26 06:13, the station BB23 in central Bornholm Basin was intensively sampled, including CTD measurements, use of the water sampler, and sampling of the distribution of ichthyoplankton and zooplankton with 6 hauls of the multinet MAXI covering the water column in 5 m layers, 7 hauls of the multinet MIDI covering the water column in 10 m layers, and 4 hauls each with the Apstein and WP2 net.

After completion of the research program, RV Alkor steamed for Kiel harbor and reached port on April 27 at 05:48. Compared to the initial cruise program, the only changes lay in some reorganization of the order of cruise legs to avoid bad weather conditions. The detailed timeline below, the cruise track (Figure 1), the station list (Appendix A) and an overview of gear deployments (Table 1) provide additional information regarding the cruise.

Detailed cruise timeline (all times board time):

Saturday 13/04/2013 0800 leaving GEOMAR-pier, heading with direction Kiel Bight.
1024 start of station work in Kiel Bight. CTD, Bongo, Helgoländer larvae net, MIDI multinet, pelagic fishery. 1729 end of fishery, transfer to Arkona Basin.

Sunday 14/04/2013 0556 start of station work in the Arkona Basin. CTD, Bongo, Helgoländer larvae net, pelagic fishery.

1552 completion of work in Arkona Basin: transfer to Bornholm Basin.

Monday 15/04/2013 0559 Start of station work in the Bornholm Basin. CTD, Helgoländer Larvennetz, pelagic fishery

1740 End of last haul.

1929 Start of hydro acoustic transect T2.

Tuesday 16/05/2013 0339 End of hydro acoustic transect T2.

0557 Start of pelagic fishery and CTD hauls on 5 stations along transect T2, plus Helgoländer larvae net on one station.

1521 End of last fishery haul and transfer to Gotland Basin.

Wednesday 17/05/2013 0601 Start of pelagic fishery, CTD and IKS-80 hauls on 5 stations, plus Helgoländer larvae net on one station.

1801 End of pelagic fishery, continuation of station work with CTD and IKS-80 working westwards towards Stolpe trench.

2314 Switch from IKS-80 to Bongo net, continuation of station work.

Thursday 18/05/2013 0559 Resuming with pelagic fishery work plus Bongo/IKS-80 and CTD during daytime, in addition Helgoländer larvae net haul on one station; station work with IKS-80 and CTD during nighttime.

Friday 19/05/2013 0604 Resuming with pelagic fishery work plus IKS-80 and CTD hauls on 5 stations, in addition Helgoländer larvae net on one station.

1507 End of station work; heading with direction Gdynia.

1900 entering Gdynia port.

Sunday 21/05/2013 0930 After scheduled debarking of one scientist, departure from Gdynia, heading to Bornholm Basin.

1940 Begin plankton work, Bongo and CTD hauls on Bornholm Basin station grid.

Monday 22/05/2013 Continuation of Bongo and CTD hauls on Bornholm Basin station grid; use of water sampler on one station.

Tuesday 23/05/2013 0558 Resuming pelagic fishery during daytime; continuation of Bongo and CTD hauls on station grid during day- and nighttime.

Tuesday 24/05/2013 Continuation of pelagic fishery during daytime; continuation of Bongo and CTD hauls on station grid during day- and nighttime.

Wednesday 25/05/2013 Completion of pelagic fishery work and of Bongo and CTD hauls on the remaining 5 stations of the Bornholm Basin Bongo station grid, end 1703.

1935 Begin of intensive sampling of central deep station BB23; CTD, water sampler, towed multinet MAXI, multinet MIDI, Apstein, WP-2.

Thursday 26/05/2013 0813 Completion of research program; steaming for Kiel.

Friday 27/05/2013 07:48 Arrival Kiel port, GEOMAR west shore berth.

1100 Unloading completed; end of cruise.

Table 1 Overview of gear deployment. Mesh size is given in brackets.

Gear	Deployments (n)
ADM-CTD	94
Towed CTD with hydro acoustic	1
Hydroacoustic transect (continuous along cruise track)	1
Watersampler + CTD	2
Bongo, Babybongo (150µ, 335µ, 500µ)	61
IKS80 (500µ)	21
WP2 (150µ)	4
Apstein (200µ)	4
Helgoländer Larvennetz (500µ)	11
Maxi Multinet horizontal (335µ)	6
Midi Multinet horizontal (50µ)	13
Midi Multinet vertical (50µ)	7
pelagic trawl (Jungfischtrawl)	45
Pelagic trawl (80-feet net)	2

4. Scientific report and first results

Ichthyo- and zooplankton sampling

Bongo- and Babybongo hauls covered Kiel Bight (3 hauls), Arkona Basin (6 hauls), and Bornholm Basin including the western part of the Stolpe Trench (52 hauls) (Figure 2). All Bongo samples were immediately checked for the presence of the invasive combjelly *Mnemiopsis leidyi*, but no specimens were discovered. Larvae of cod (*Gadus morhua*), sprat (*Sprattus sprattus*), and flounder (*Platichthys flesus*) were picked from the 500µ bongo-samples and conserved at -80 °C for subsequent RNA/DNA analysis. The 335µ bongo samples will be used for the determination of species composition and abundance of ichthyoplankton. Preliminary results indicate that flounder eggs and larvae were most abundant, followed by sprat. Cod larvae were only sporadically present in the samples.

Stations in the eastern part of Stolpe trench and the Gdansk Deep and Southern Gotland Basin were covered with IKS-80 instead of Bongo hauls (Figure 2) to ensure compatibility of data with a long-term IKS-80 sampling series maintained by the Latvian Fish Resources Agency (LATFRA; Andrei Makarcuks).

Helgoländer larvae net (500µ) hauls coupled with CTD deployments were used to obtain live eggs for buoyancy experiments over the cruise duration (11 hauls in total).

On April 25-26, on one central, deep station in the Bornholm Basin, MAXI (335µ, towed, sampling of the water column in 5 m layers) and MIDI (50µ, vertical, sampling of the water column in 10 m layers) type multinet (HYDROBIOS, Kiel) casts were performed to reveal the vertical distribution of ichthyoplankton and zooplankton. In addition, WP-2 (150µ) and Apstein (200µ) nets were deployed to obtain additional samples for DTU-AQUA in the context of the BONUS BIO C-3 project funded for 2014 (Dr. Jörg Dutz).

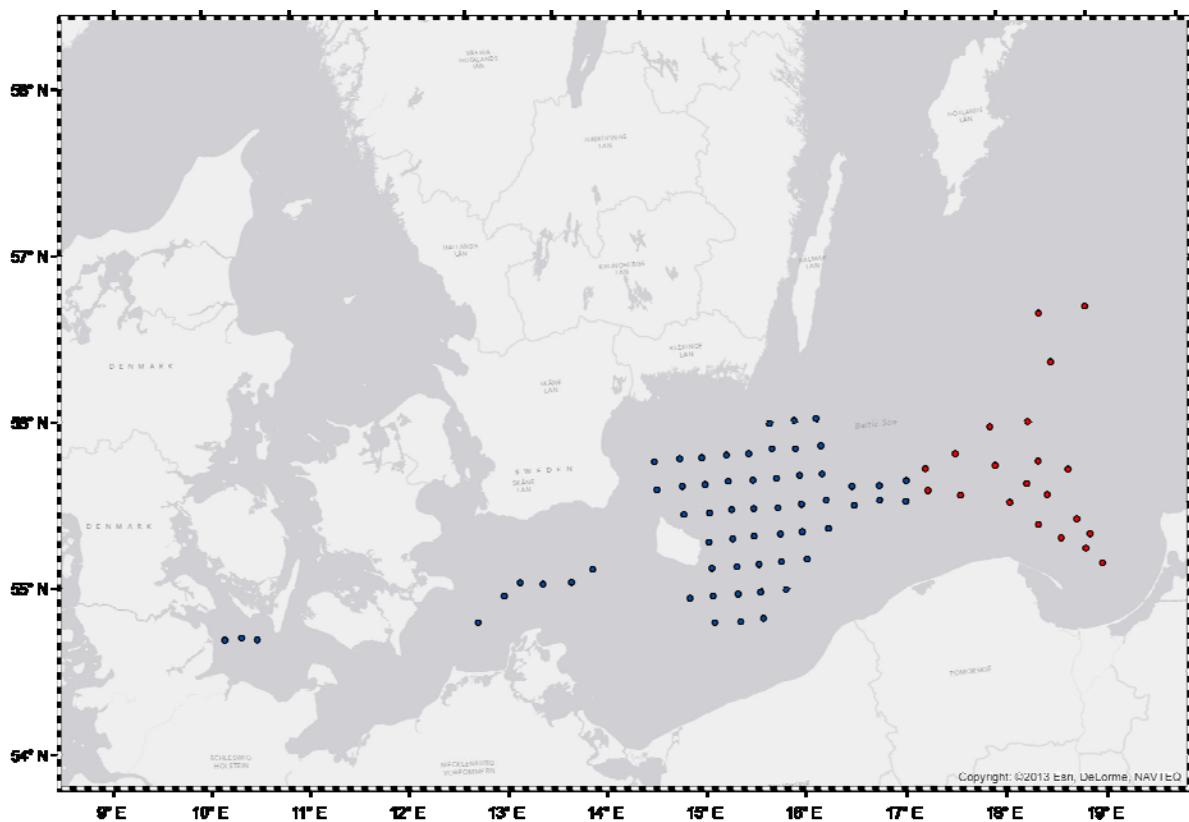

Figure 2 Plankton sampling with Bongo (blue circles) and IKS-80 (red circles) net casts during AL413. A CTD profile was also obtained at each of these locations (see cruise track in Figure 1).

Fishery

During the cruise, pelagic fishery was conducted in the Kiel Bight (2 hauls), Arkona Basin (4 hauls), Bornholm Basin (25 hauls), Stolpe Trench (3 hauls), Gotland Basin (5 hauls) and Gdansk Deep (5 hauls) (Figure 3). In parallel to the fishery hauls fish distribution patterns were detected by means of hydro acoustic measurements. Catches in the Bornholm Basin were dominated by sprat, followed by herring, cod, and flatfishes (mainly flounder (*Platichthys flesus*)), but also, common dab (*Limanda limanda*), plaice (*Pleuronectes platessa*), and long rough dab (*Hippoglossoides platessoides*). Some whitings (*Merlangius merlangus*) occurred in particular in Arkona Basin. Sticklebacks (Four mackerels (*Scomber scombrus*), 2 pollocks (*Pollachius virens*), and 2 fourbeard rocklings (*Ciliata mustela*) completed the catches. An impression of fish biodiversity observed on a deep station in Bornholm Basin is given in Figure 4. Regarding cod, it was noticeable that higher catches could only be accomplished if the nets were towed close to the bottom, indicating a near benthic distribution and oxygen levels sufficiently high for cod in the bottom layers. Regarding the species composition, the occurrence of rarely caught mackerels and pollocks, which at present very likely represent migrants from the North Sea and not self-sustaining populations, are of interest. In the context of global change, trends in the occurrence of North Sea species and potential indications for establishing populations in the Baltic Sea will be of interest in the future.

For each haul and the entire catch, catch weight and length frequencies of all species (illustrated in Figure 5 for cod) were taken. Stomach samples were taken from sprat (min 10 per 1cm length class) and herring (min 10 per 2 cm length class). For cod, single fish data (length, weight, sex and maturity stage) and samples (otoliths, fin clips for genetic analysis, stomachs and gonads) were obtained for each individual (see Figure 6 for illustration).

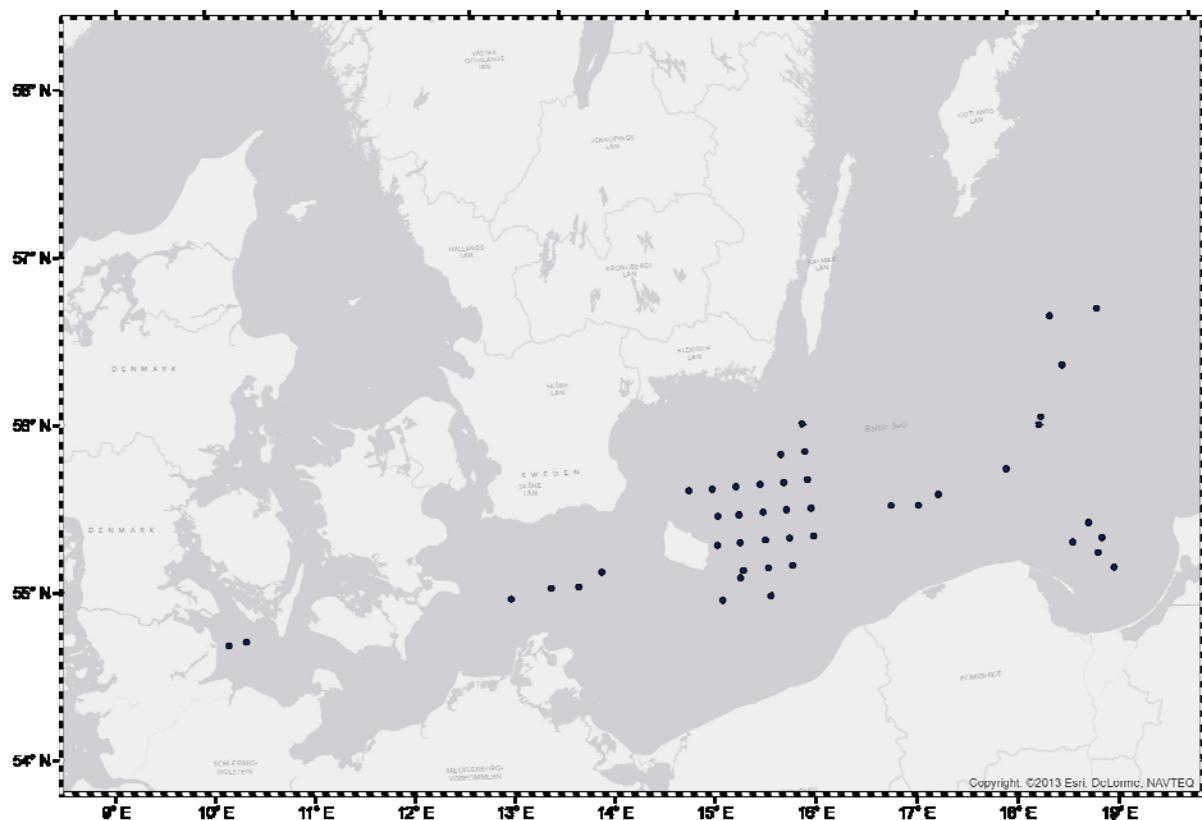

Figure 3 Fishery stations covered during AL413 with pelagic trawls (blue dots).

Figure 4 Baltic fish biodiversity. Different fish species caught during one fishery haul in central Bornholm Basin. Note that most hauls are characterized by lower biodiversity, with catches limited to sprat, herring and cod in many locations. Top: Cod; Left top to bottom: Herring, sprat, flounder; Right: mackerel, foubeard rockling.

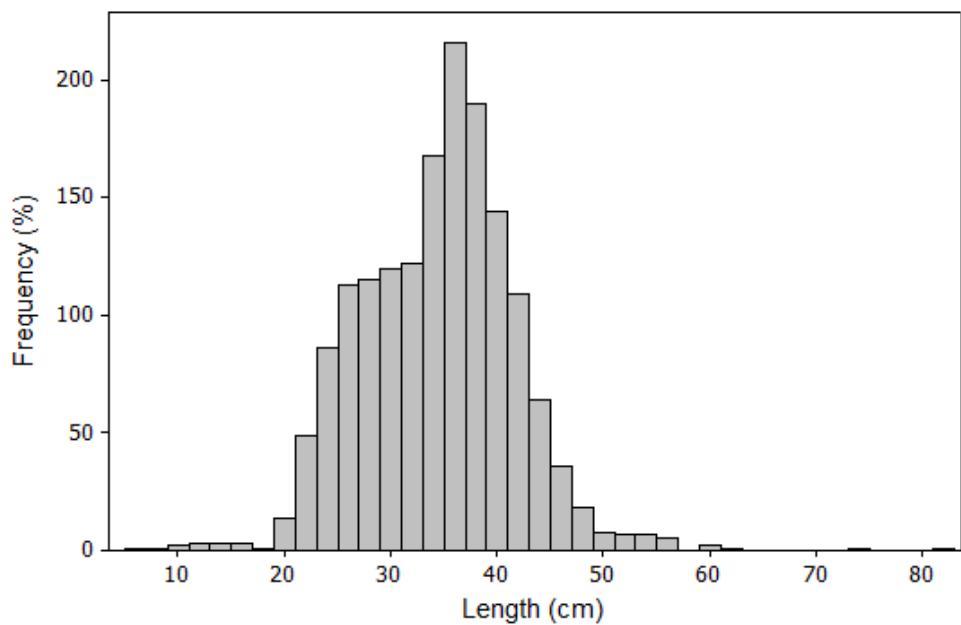

Figure 5 Relative length frequency distribution of cod catches during AL413 ($n = 1610$).

Figure 6 Samples (otoliths, fin clips, stomach contents, gonads) and measures (total length, weight, gutted weight, liver and gonad weight) taken from each cod individual during the cruise (illustrated here for a 38 cm female, maturity stage IV, with full stomach, from Bornholm Basin).

Hydrography

In total, CTD profiles were obtained from 96 stations with the ADM-CTD and the HYDROBIOS water sampler with attached CTD (Figure 1). Conditions varied depending on the basin and location of the Baltic sampled, and will be analyzed in depth in context of the long-term data series on hydrographic conditions. In general, Bornholm Basin stations were characterized by a permanent halocline in ca. 60 m depth, with sharply increasing salinity and decreasing oxygen levels below. However, oxygen near the bottom in many locations still exceeded 2.5 to 3 ml/l, which pointed to some inflow over the winter/early spring 2012/2013, and is sufficient for the (at least temporary) presence of cod adults. This agrees with observations from fishery hauls, which showed increased catches with increasing proximity of the trawl to the bottom.

Additionally, a towed CTD system was deployed to obtain a high resolution of the hydrographic situation on one North-South transect across Bornholm Basin.

5. Scientific equipment: instruments and gear

Hydrography:

- ADM-CTD with additional pH and O₂ sensor
- Hydrobios Water Sampler with CTD, pH and O₂ sensor

Zooplankton:

- Baby Bongo-Net (150 µm)
- Bongo-Net (335µm)
- Bongo Net (500µm)
- WP2 (150µm)
- Apstein net (200µm).

Ichthyoplankton:

- Bongo-Net (335µm and 500 µm)
- Hydrobios Multinet MAXI (335µm horizontal tows)
- Hydrobios Multinet MIDI (50µm horizontal tows and vertical hauls)
- IKS80 (500µm)
- Helgoländer Larvennetz (500µm)

Fish:

- Jungfisch Trawl and 80-feet net (both pelagic trawls)

Hydroacoustic:

- 38, 70, 120 and 200 kHz-echosounder EK60

6. Acknowledgements

Thanks to Captain Lass and the entire crew of RV Alkor for their outstanding support during the cruise!
