

Cruise Report: 11.05. – 24.05.2013

R.V. Alkor

Cruise No.:AL 415

General subject of research: Physical, chemical, biological and fishery oceanography

Port calls: Visby, Sweden 18.05.2013 – 19.05.2012

Helmholtz Centre for Ocean Research Kiel GEOMAR: Marine Ecology, Evolutionary Ecology of Marine Fishes (FB3)

Chief Scientist: Dr. Holger Haslob

Number of Scientists: 11

Projects: CAVIAR, BIOACID II, DFG-Mnemiopsis, POPDYN, BONUS, others

Research programme

This multidisciplinary cruise was conducted within the framework of several on-going research projects and to maintain a monitoring time series which is conducted in the Bornholm Basin and adjacent areas since 1986 by the Helmholtz Centre for Ocean Research Kiel GEOMAR (former IFM-GEOMAR Kiel, former IfM Kiel). Research activities were conducted in the Kiel Bight, Arkona Basin, Gdansk Deep and Southern Gotland Basin (Fig. 1). Investigations considered hydrographic measurements, ichthyo- and zooplankton distributions, and the distribution and abundance of pelagic clupeid and gadoid fish species. The physical measurements conducted in the Bornholm Basin were designed to investigate the quasi-synoptic three-dimensional distribution of temperature, salinity and oxygen (CAVIAR). Further, a pH-sensor was attached to the CTD to address acidification of the water column (BIOACID II). An 8 x 10 nm station grid (45 stations) was covered with CTD casts in the Bornholm Basin. On the same stations Bongo-casts were conducted in order to assess the abundance, biomass, production and nutritional condition of zoo- and ichthyoplankton. In the Southern Gotland Basin and the Gdansk Deep IKS-80 and CTD casts where performed. Further, emphasis was given on the meso- to small-scale horizontal distribution of their main vertebrate and invertebrate predators (DFG-Mnemiopsis/DTU-AQUA). Pelagic fishery hauls were conducted to collect clupeid stomachs and cod single fish data (DTU-AQUA). Stock structure, gonadal maturation and egg production of sprat and cod was investigated (POPDYN).

Gears used

Hydrography: ADM-CTD with pH and O₂ sensor, Hydrobios Water Sampler with CTD

Zooplankton: Baby Bongo-Net (150 µm), Bongo-Net (335µm), Bongo Net (500µm), WP2 (150µm), Apstein net (50µm).

Ichthyoplankton: Bongo-Net (335µm and 500 µm), Hydrobios MAXI Multinet (335µm horizontal tows), Hydrobios MIDI Multinet (50µm), IKS80 (500µm)

Fish: Jungfisch Trawl (pelagic trawl)

Hydroacoustic: 38, 70, 120 and 200 kHz-echosounder EK60

Scientific crew:

- Holger Haslob	(Chief Scientist)	Thünen Institute SF	whole cruise
- Svend Mees		GEOMAR, Kiel	whole cruise
- Andrea Franke		GEOMAR, Kiel	Visby - Kiel
- Burkhard von Dewitz		GEOMAR, Kiel	whole cruise
- Malte Heuer		HYDROBIOS, Kiel	Kiel - Visby
- Martin Grimm		CAU, Kiel (student)	whole cruise
- Lili Beckmann		CAU Kiel, (student)	whole cruise
- Clarissa Mohm		CAU Kiel, (student)	whole cruise
- Svantje Gottschlich		CAU Kiel, (student)	whole cruise
- Jonas Drescher		CAU Kiel, (student)	whole cruise
- Jörg Dutz		DTU-AQUA, Copenhagen	whole cruise

Summary of cruise

The cruise started as scheduled, RV Alkor left Kiel 11th May 09:00 heading to the research area of the Bornholm Basin. The station work started 12th May 01:00 UTC. The next two days the Bornholm Basin station grid was covered with Bongo and CTD casts. On one station in the central basin additional hauls with WP2, Apstein net, and water sampler was performed. After the completion of the standard station grid several multicasts were performed in the central basin. Due to technical problems with the on-board internet connection the research program was interrupted after the multinet station for approximately 4 h, and a technician was picked up at Nexø roads (14th May 20:00). The research program was then continued with hydro acoustic/towed CTD transects during the night and fishery hauls on the same transects during the day. When the first fisheries transect was completed on the 15th May, Alkor sailed back to Nexø roads to debark the technician. The research program was continued on 15th May 19:05. On the 17th May three fishery hauls were performed, before the fishery winch broke down during the fourth haul. Unfortunately, it was not possible to fix the winch and all planned fishery operations had to be cancelled for the rest of the cruise. The hydro acoustic transect was finished without further fishery hauls and at 18:05 RV Alkor sailed with direction to Visby. Visby port was reached 18th May 08:00. The next day one person was debarked and one embarked, before Alkor left Visby at 18:00. On 20th May 06:00 the first station in the Gotland Basin was reached and the station work was continued. For the next two days different plankton gears (IKS-80, WP-2, Bongo) and the CTD was deployed on stations in the Gotland Basin, Gdansk Deep, and Slupsk Farrow. During the 22th May the night and day distribution of ichthyoplankton, zooplankton, and pelagic fish was investigated in the central Bornholm Basin. For this purpose the multinet MAXI and multinet MIDI were deployed on the same station during complete darkness and during the daytime. Fish distribution during darkness and daylight in relation to hydrographic parameters was investigated by means of a hydro acoustic / towed CTD transect. After the operations in the Bornholm Basin were finished with additional WP2 and Apstein net casts in the central basin, it was again necessary to pick up a technician at Nexø roads to fix the board internet, which was not operating stable yet. The research program was continued on 23th May in the Arkona Basin with Bongo and CTD casts. In the early morning hours of the same day the station work was interrupted because of bad weather condition for 3.5h. The last station was performed 24th May at 00:36 after which Alkor sailed back to Kiel. Kiel port (Seefischmarkt) was reached 24th May 12:00. The ship was unloaded and shifted to the west shore pier where the cruise ended, two days before the planned end of the cruise.

Due to the failure of the fishery winch, the cruise was only in parts successful. Five days (60%) of fishery operations had to be cancelled. Until then, all the planned work was accomplished without problems. During the second cruise leg planned and additional casts with several plankton nets and an additional hydro acoustic transect were performed. Another problem during this cruise was the instable internet connection which could not be solved totally till the end of the cruise.

A cruise track (Fig. 1), an overview of gear deployments (Tab. 1) and a detailed station list (Tab. 3) is given below. Thanks to Captain Lass and his crew of RV Alkor for an outstanding support during the whole cruise!

Tab. 1: Overview of gear deployment. Mesh size is given in brackets.

Gear	Number of deployments
ADM-CTD	106
Towed CTD with hydro acoustic	4
Watersampler	11
Bongo- Babybongo (150 μ , 335 μ , 500 μ)	69
WP2 (200 μ)	12
Maxi Multinet horizontal (335 μ)	10
Midi Multinet (50 μ)	10
IKS80 (500 μ)	25
pelagic trawl (Jungfischtrawl)	14

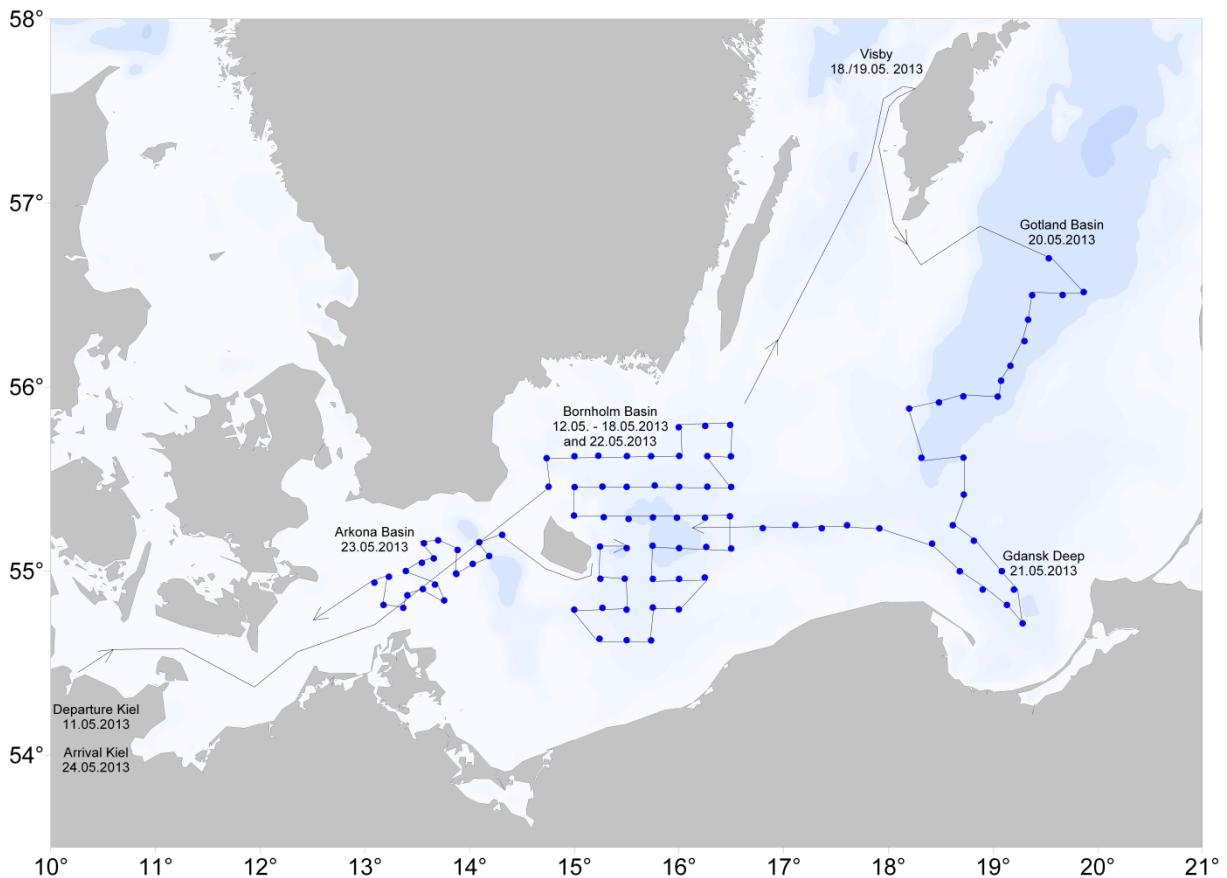

Fig. 1: Cruise track AL415. Red circles denote CTD casts.

Ichthyo- and zooplankton sampling

Bongo- and Babybongo casts were performed in the Bornholm Basin (45 hauls), Slupsk Farrow (4 hauls), and Arkona Basin (19 hauls) (Fig. 2). All Bongo samples were immediately checked for the presence of *Mnemiopsis leidyi*. No specimens of this invasive ctenophore were found in the investigation areas. Larvae of cod (*Gadus morhua*), sprat (*Sprattus sprattus*), and flounder (*Platichthys flesus*) were picked from the 500 μ bongo-samples for subsequent RNA/DNA analysis. The 335 μ bongo samples will be used for abundance determination of ichthyoplankton. Preliminary results indicate that flounder eggs and larvae

were most abundant, followed by sprat. Cod larvae were only sporadically present in the samples. Stations in the Gdansk Deep and the Southern Gotland Basin were covered with IKS-80 casts (Fig. 2). IKS-80 samples were taken in cooperation with Latvian Fish Resources Agency (LATFRA; Andrei Makarcuks). On one central station in the Bornholm Basin MAXI (335μ , towed) and MIDI (50μ , vertical) type multinet (HYDROBIOS, Kiel) casts were performed to reveal the vertical distribution of ichthyoplankton and zooplankton. These hauls were performed by total darkness as well as during daylight to reveal vertical migration patterns. WP-2 (150μ) and Apstein (50μ) nets were deployed on a central, deep station in the Bornholm Basin at the beginning and towards the end of the cruise to get additional information on the seasonal dynamics of zooplankton (Fig. 2). Several WP2 nets were deployed to sample live material for copepod broodstocks which will be established at DTU-AQUA within the BONUS project (Dr. Jörg Dutz).

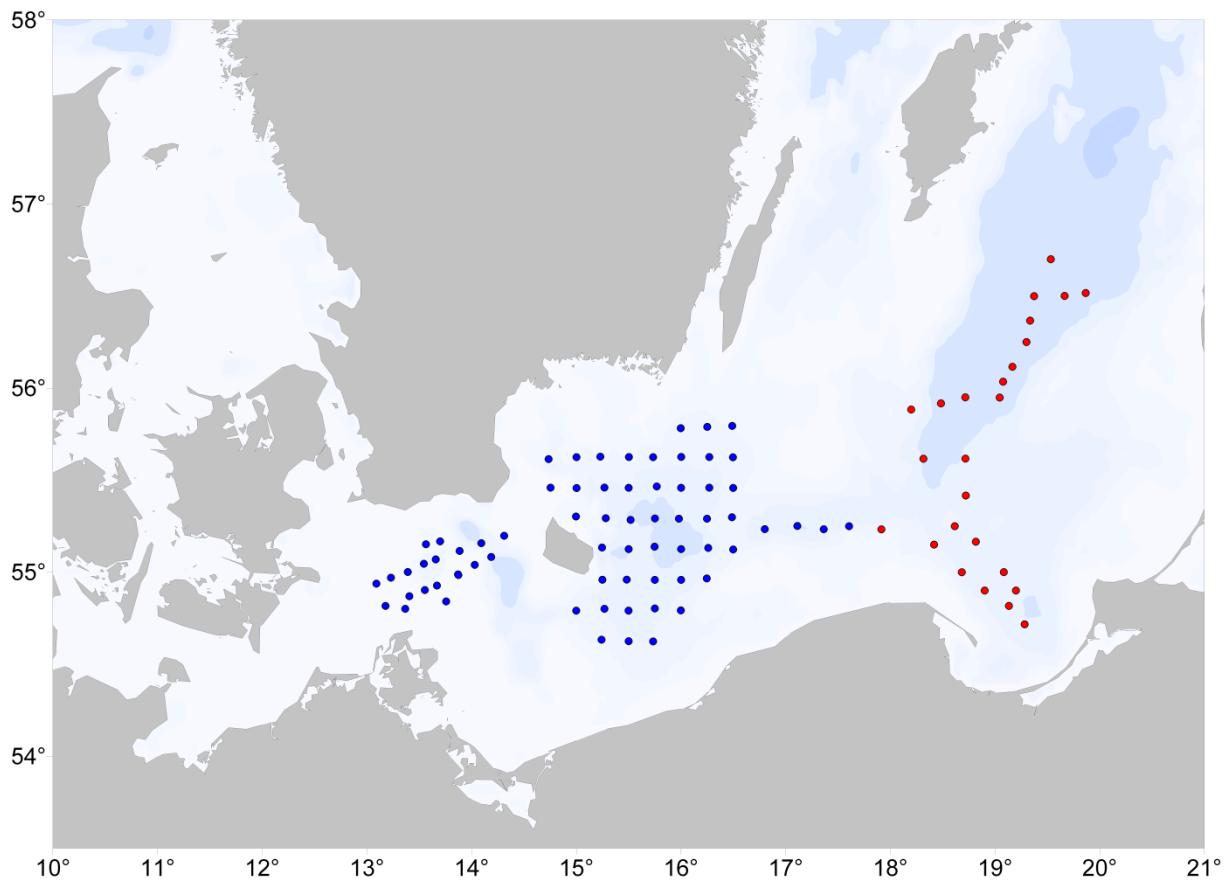

Fig. 2: Bongo, IKS-80, CTD casts during AL415. Blue circles = bongo and CTD, red circles = IKS-80 and CTD.

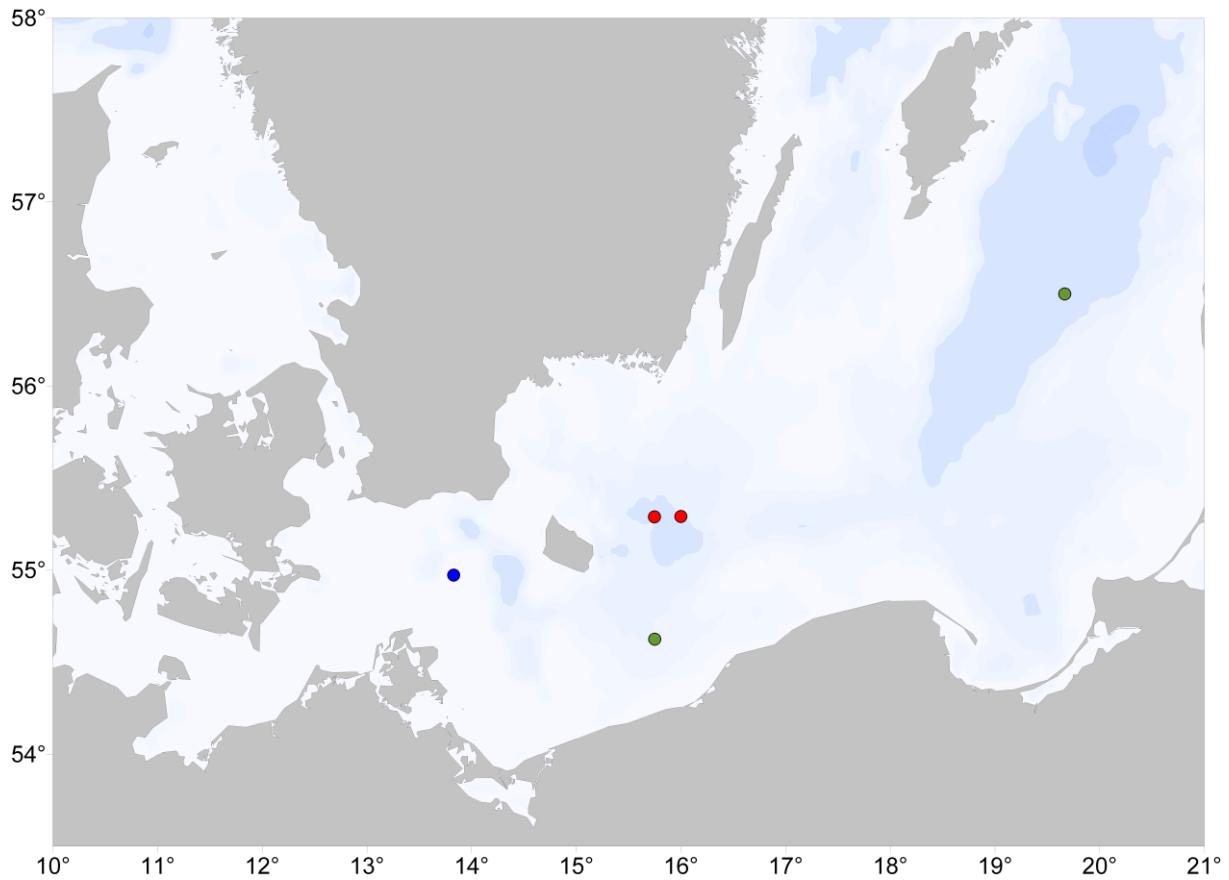

Fig. 3: Multinet, WP-2, and Apstein net casts during AL415. Blue circle = Multinet MAXI; green circles = WP-2; red circles = Multinet MAXI and Midi, WP-2, Apstein.

Fishery

During the cruise pelagic fishery was conducted in the Bornholm Basin only (14 hauls; Fig. 4). Planned fishery hauls in all other areas (Arkona Basin, Gdansk Deep, and Southern Gotland Basin) had to be cancelled because of the fishery winch failure. In parallel to the fishery hauls fish distribution patterns were detected by means of hydro acoustic measurements. Catches in the Bornholm Basin were dominated by sprat, followed by herring and cod. Very few whitings (*Merlangius merlangus*) and flounders occurred in the catches also. Compared to previous years the cod catches were extremely low.

From all hauls species composition, catch weight and length frequencies of all species were taken (Fig. 5). Stomach samples were taken from sprat (min 10 per 1cm length class) and herring (min 10 per 2 cm length class). For cod single fish data, otoliths, and fin clips for genetic analysis were sampled from each individual.

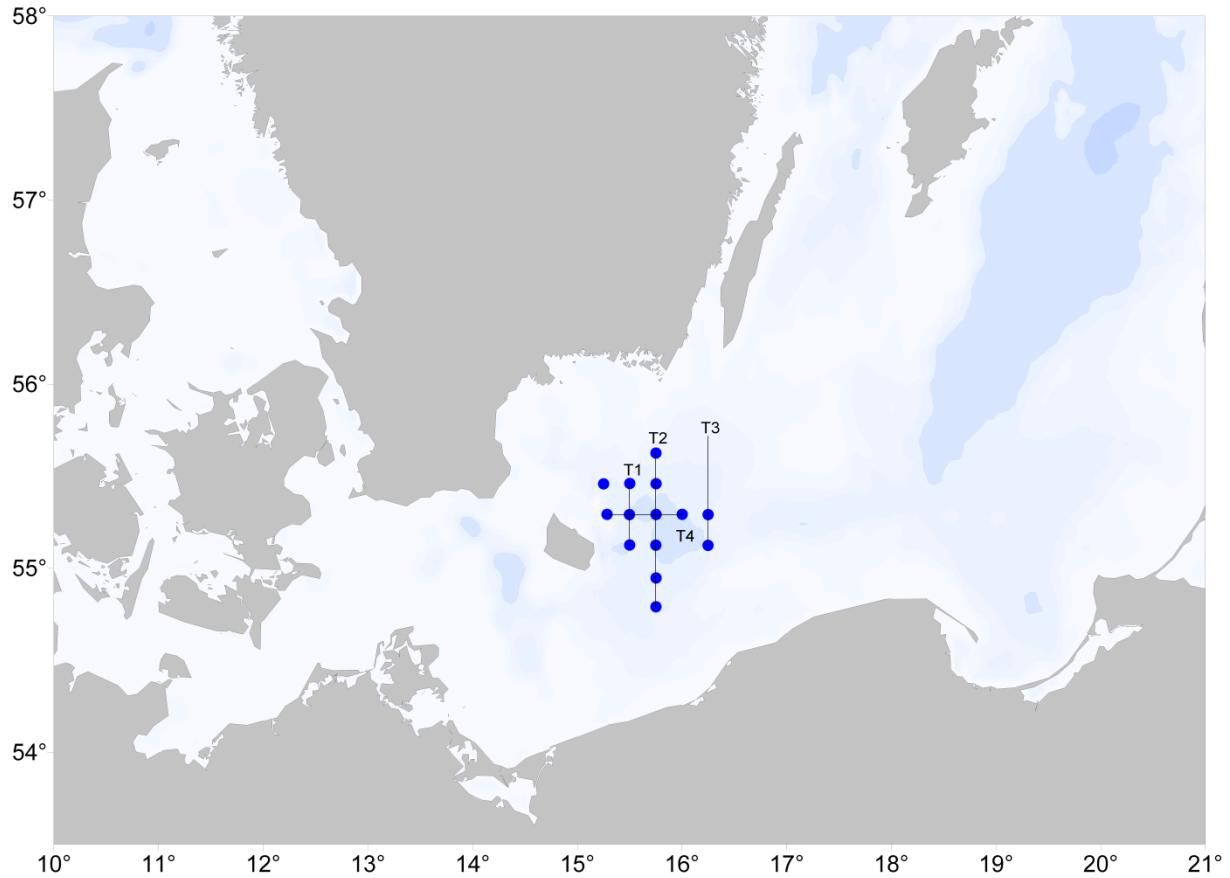

Fig. 4: Fishery stations covered during AL415 with the Jungfisch-Trawl. Lines denote hydro acoustic transects covered with a towed CTD system (T1, T2, T3, T4).

Tab. 2: Catch in numbers and weight (kg) of the target species cod, sprat, and herring for each haul.

Species	1	2	3	4	5	6	7	8	9	10	11	12	13	14	sum	
Cod (<i>Gadus morhua</i>)	n kg	3 0.7	0 0.9	3 0.3	1 0.3	2 1.2	2 0.5	2 0.9	2 1.4	42 14.0	20 4.4	35 13.6	6 3.3	1 0.2	121 41.6

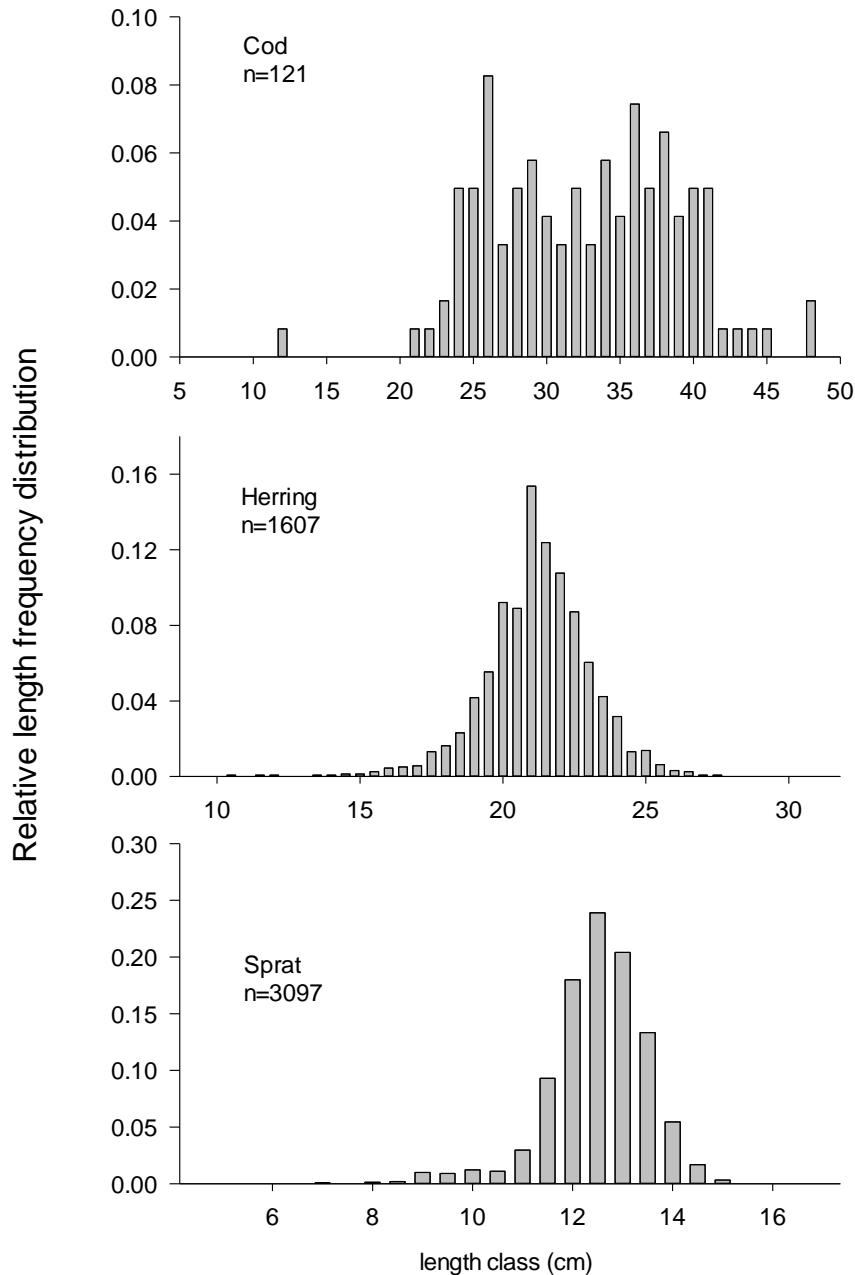

Fig. 5: Relative length frequency distribution of cod, herring, and sprat in the Bornholm Basin.

Hydrography

117 CTD casts (ADM-CTD and HYDROBIOS water sampler) were performed. Temperature profiles revealed 6.7 °C from the surface down to 14 m water depth (Fig. 6). Below this mixed surface layer temperatures declined below 2.0 °C. Below the halocline temperatures reached up to 5.7 °C in the central Bornholm Basin. The permanent halocline was located in ca. 60 m depth. Maximum salinity values near the bottom reached 16.7 in the Bornholm Basin. Oxygen decreased from surface to bottom depth. However, oxygen was detected at the bottom of the Bornholm Basin with values up to 3.7 ml/l. These results indicate an inflow event of oxygenated North Sea water into the Bornholm Basin in winter 2012/2013.

Additionally, a towed CTD system was deployed to obtain a high resolution of the hydrographic situation on selected transects (Fig. 4).

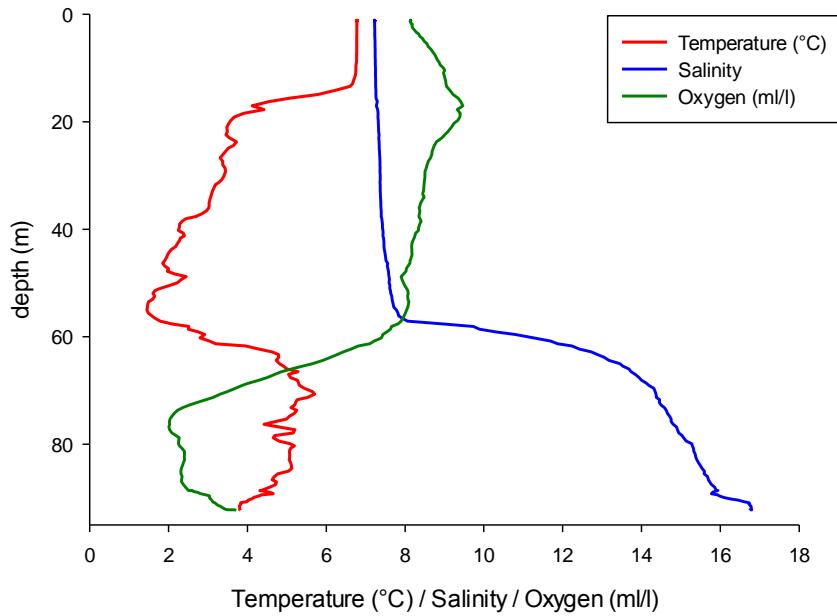

Fig. 6: Hydrography on a central station in the Bornholm Basin (St. 301 55°17.5'N 015° 45.0'E, bottom depth 93m).

Report of cruise AL415 with technical details (board time)

Saturday	11/05/2013	0900	leaving IfM-pier, heading with direction Bornholm Basin.
Sunday	12/05/2013	0300	beginning plankton station work in the Bornholm Basin. CTD, Bongo, WP2, Apstein, MIDI and MAXI multinet.
Tuesday	14/05/2013	1813	End of plankton station Bornholm Basin. Sailing to Nexø roads to pick up technician.
		2203	Start of hydro acoustic transect T1.
Wednesday	15/05/2013	0410	End of hydro acoustic transect T1.
		0601	Start of pelagic fishery, 5 hauls on transect T1.
		1445	End of pelagic fishery. Sailing to Nexø roads to debark technician.
		1904	CTD and water sampler station.
		2025	Start of hydro acoustic transect T2.
Thursday	16/05/2013	0428	End of hydro acoustic transect T2.
		0600	Start pelagic fishery on transect T2, 6 hauls.
		1702	End of pelagic fishery on T2.
		1904	Start of hydro acoustic transect T3.
Friday	17/05/2013	0441	End of hydro acoustic transect T3.
		0603	Start of pelagic fishery on transect T3. Only 3 successful hauls due to technical problems with the fishery winch.

		1607	Fishery aborted definitely. The rest of T3 is covered with hydro acoustic.
		1805	End of T3. Leaving investigation area with direction to Visby.
Saturday	18/05/2013	0800	Arrival at Visby port.
Sunday	19/05/2013		Exchange of staff.
		1800	Leaving Visby port, heading with direction Southern Gotland Basin.
Monday	20/05/2013	0600	Beginning plankton station work in the Southern Gotland basin. CTD, IKS-80, WP2.
Tuesday	21/05/2013	0411	First plankton station Gdansk Deep.
		1537	First plankton station Slupsk Farrow.
		2356	multinet station in the central Bornholm Basin, night casts.
Wednesday	22/05/2013	0252	Start of hydro acoustic transect T4.
		1233	End of hydro acoustic transect T4.
		1243	Multinet station in central Bornholm Basin, day casts. Additional WP2, Apstein net casts.
		1839	End of station work in the Bornholm Basin. Sailing to Nexø roads to embark technician staff.
		2130	Leaving Nexø roads, heading with direction Arkona Basin.
Thursday	23/05/2013	0202	Beginning with plankton station work in the Arkona Basin. CTD, Bongo, multinet MAXI.
		0500	Interruption of station work due to bad weather conditions.
		0826	Continuing of station work.
Friday	24/05/2013	0049	last station completed, leaving research area with direction Kiel.
		1148	arrival Kiel port, Seefischmarkt. Ship is unloaded.
		1230	arrival west shore berth, end of cruise.
