The authors regret <that there was an error in the transcribing process of Equation 20, found in section 2.1.7. of the article. The corrected equation, with added parentheses for further clarity, is as follows:

$$C_0 = (\gamma D_*)^{-0.695} \times g[(\omega/D_r)^{1.9}] \times T/d \quad (20)$$

All computation results, analysis, discussion and conclusions presented throughout the paper already reflect the findings based on the correct formula, with the only error being with the transcribing of Eq.20>.

The authors would like to apologise for any inconvenience caused.
