## Preface

We are pleased to present the 17th volume of the University of Massachusetts Occasional Papers.

Ever since Pollock's (1989) work, what could be called the Split INFL Hypothesis has generated a great deal of interest in the structure of the inflectional system. This volume can be seen as an attempt at investigating issues related to this hypothesis. While each paper contained here explores a different angle, they all share the common goal of better understanding the nature of inflection, in terms of functional projections.

First and foremost we would like to thank the contributors to this volume for both the present work and for having helped to create a challenging intellectual atmosphere here at the Linguistics Department at UMass.

We would also like to thank the Graduate Linguistic Student Association (GLSA), and especially its manager Mercè González for her assistance in the production of this volume.

Last but not least, thanks to Kathy Adamczyk and Lynne Ballard who have made every possible problem less than a problem for us. And to Christine Bartels for editorial advice.

We hope that reading this volume is as enjoyable to you as putting it together was for us.

*The Editors.*
