Dedicatoria

Este trabajo que representa la culminación de un proceso académico importante para el desarrollo de mi vida profesional, es dedicado a mi esposa e hija, madre, padre, quienes me dieron su apoyo incondicional en todo momento y que creyeron en mi para llevar a cabo este proyecto de formación que por diferentes motivos se prolongó más de lo estipulado.

También se lo dedico a mis compañeros y tutores quienes me acompañaron en el desarrollo de este diplomado el cual será una base para nuestro futuro profesional.

Agradecimientos

Primordialmente, agradezco a Dios por sus bendiciones que cada día me da para crecer como persona y profesional, con el fin de servir y ser mejor.

A toda la familia que me han dado su apoyo en los buenos y malos momentos.

De igual forma a los tutores que estuvieron siempre al pendiente de mi proceso y que me brindaron todos los conocimientos y sabiduría necesaria para poder llegar a término de esta formación con total éxito.

RESUMEN

Cisco Systems es una empresa global con sede en San José, California, Estados Unidos, principalmente dedicada a la fabricación, venta, mantenimiento y consultoría de equipos de telecomunicaciones. Es mundialmente conocida por ser líder en el mundo de redes de datos y TI, fabrica componentes de red, como routers, firewalls de hardware, productos de telefonía IP, entre otros, estos dispositivos son bastante robustos y conocidos en todo el mundo.

La Certificación Cisco es un plan de capacitación en tecnología de redes informáticas que la empresa Cisco ofrece. Se divide en tres niveles, de menor a mayor complejidad: Cisco Certified Network Associate, Cisco Certified Network Professional y Cisco Certified Internetwork Expert, más conocidos por sus siglas: CCNA.

Packet Tracer es la herramienta de aprendizaje y simulación de redes interactiva para los instructores y alumnos de Cisco CCNA. Esta herramienta les permite a los usuarios crear topologías de red, configurar dispositivos, insertar paquetes y simular una red con múltiples representaciones visuales.

ABSTRACT

Cisco Systems is a global company based in San José, California, United States, primarily engaged in the manufacture, sale, maintenance and consulting of telecommunications equipment. It is known worldwide for being a leader in the world of data networks and IT, manufactures network components, such as routers, hardware firewalls, IP telephony products, among others, these devices are quite robust and known throughout the world.

The Cisco Certification is a computer network technology training plan that the Cisco company offers. It is divided into three levels, from least to greatest complexity: Cisco Certified Network Associate, Cisco Certified Network Professional and Cisco Certified Internetwork Expert, better known by its acronym: CCNA.

Packet Tracer is the interactive networking simulation and learning tool for Cisco CCNA instructors and students. This tool allows users to create network topologies, configure devices, insert packages and simulate a network with multiple visual representations.

INTRODUCCION

Estamos viviendo en una época en la cual la tecnología es parte indispensable de la vida cotidiana, las telecomunicaciones y las nuevas técnicas de información y comunicación han tomado un inalcanzable avance siendo papel indispensable para el desarrollo de la humanidad.

Para el crecimiento de cualquier tipo de empresa, ya sea mediana o grande, el envío de información digital y conectividad de todos sus computadores sin importar la presencia física o geográfica es sumamente importante que tengan recurrir a la tecnología como un medio confiable, seguro y eficaz para interconectar todas sus sedes.

En esta prueba de habilidades tiene como fin hacer un recorrido por las temáticas vistas previamente en el diplomado y busca identificar el grado de desempeño adquirido en estas competencias y demostrar las habilidades o destrezas que se adquirieron durante del desarrollo del mismo.

Para el desarrollo de los escenarios planteados recurri al software packet tracer con el cual durante todo el tiempo del diplomado interactuamos con él para la realización de los trabajos colaborativos y el cual es fundamental para poder aplicar todos los temas aprendidos.

OBJETIVOS

- Diseñar la topología de red y crear el correspondiente desarrollo de acuerdo a los requerimientos de cada uno de los escenarios planteados en la prueba de habilidades.
- Desarrollar la prueba de habilidades aplicando los conocimientos teórico prácticos adquiridos durante las etapas del curso CCNA1 y CCNA2.
- realizar el desarrollo de los escenarios propuestos con el programa de simulación packet tracer y la correspondiente documentación solicitada en el presente taller.

DESARROLLO ESCENARIO 1

Una empresa posee sucursales distribuidas en las ciudades de Bogotá, Medellín y Cali en donde el estudiante será el administrador de la red, el cual deberá configurar e interconectar entre sí cada uno de los dispositivos que forman parte del escenario, acorde con los lineamientos establecidos para el direccionamiento IP, protocolos de enrutamiento y demás aspectos que forman parte de la topología de red.

Topología de red

Los requerimientos solicitados son los siguientes:

Parte 1: Para el direccionamiento IP debe definirse una dirección de acuerdo con el número de hosts requeridos.

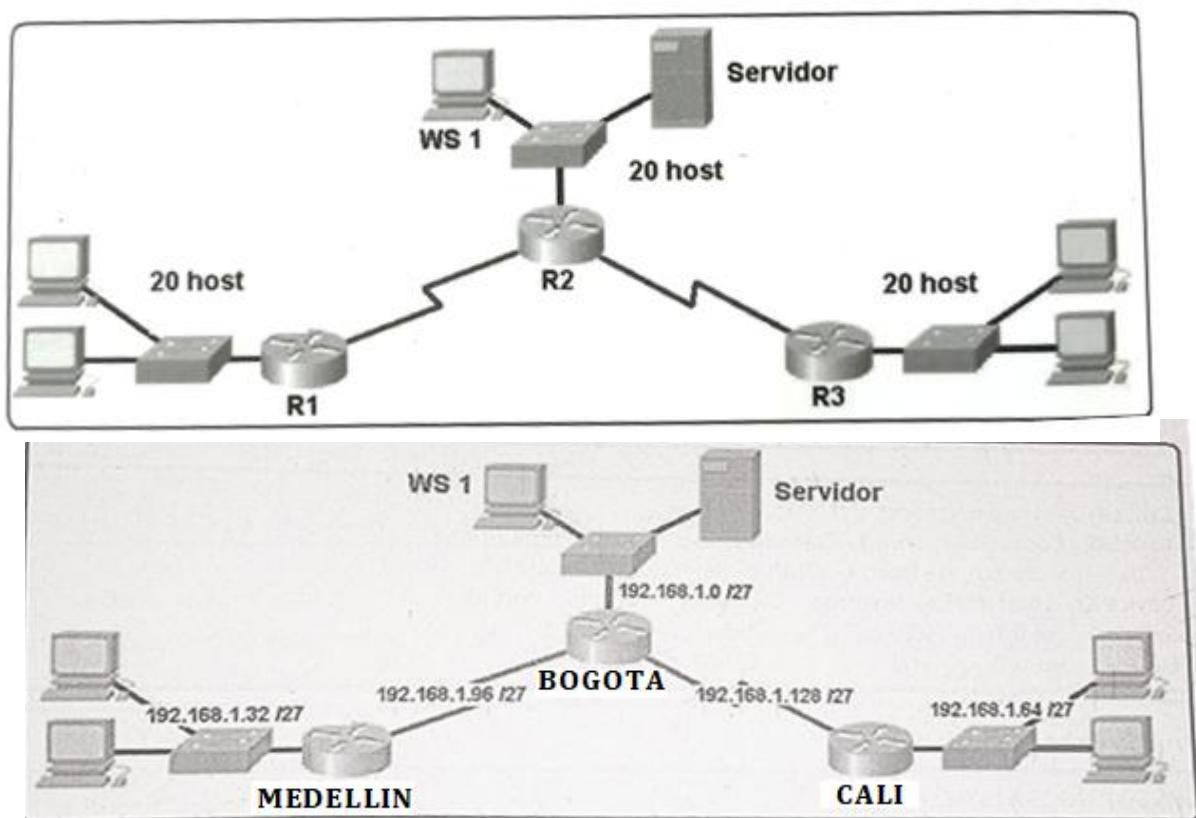

Parte 2: Considerar la asignación de los parámetros básicos y la detección de vecinos directamente conectados.

Parte 3: La red y subred establecidas deberán tener una interconexión total, todos los hosts deberán ser visibles y poder comunicarse entre ellos sin restricciones.

Parte 4: Implementar la seguridad en la red, se debe restringir el acceso y comunicación entre hosts de acuerdo con los requerimientos del administrador de red.

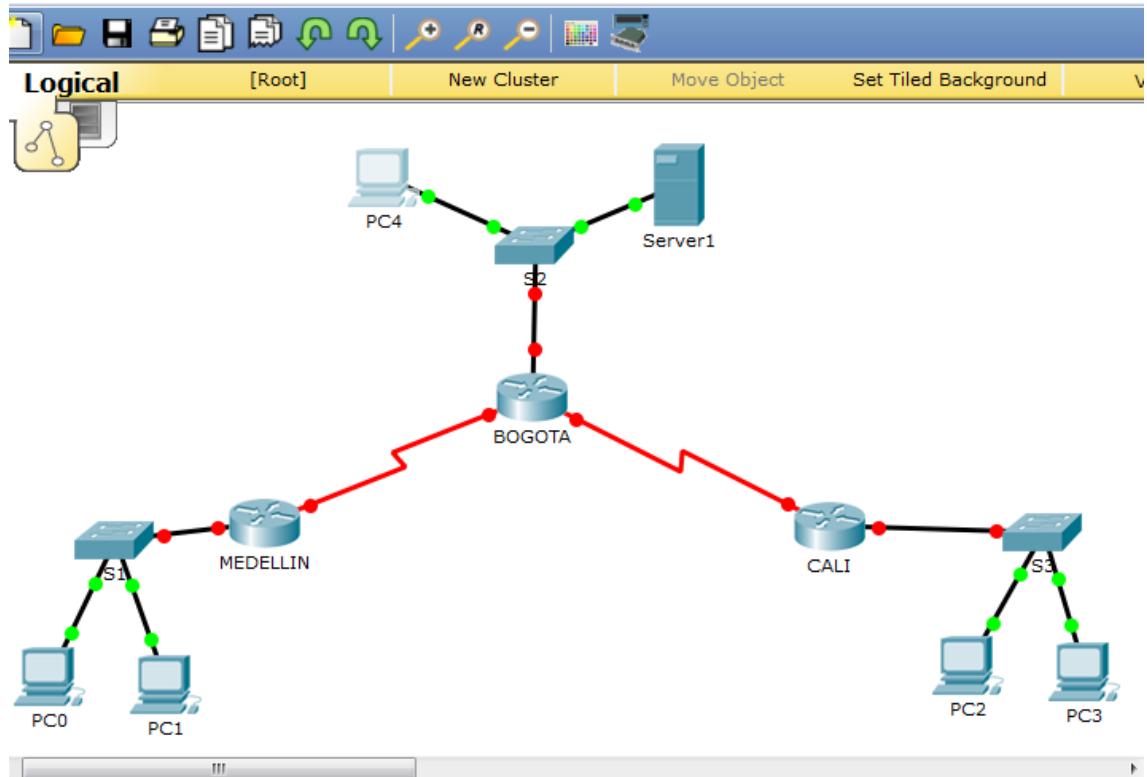

Parte 5: Comprobación total de los dispositivos y su funcionamiento en la red.

Parte 6: Configuración final.

- Desarrollo Escenario 1 Para comenzar identificamos los dispositivos que vamos a utilizar para llevar a cabo los requerimientos de la empresa
 - 3 routers 1941
 - 2 switches 2960
 - 5 pc de escritorio genéricos
 - 1 server -tp

- Realizar la topología según los requerimientos de la empresa

- Paso 3 Apagamos el primer router y agregamos una interfaz WIC-2T, para disponer de puertos suficientes para interconectar los routers, luego volvemos a encender, repetimos este paso en los 2 de 3 routers restantes agregando esta interfaz en cada uno.
- Configuración de los routers
 - Router Medellín

```

Router>enable
Router#conf t
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#hostname Medellin
Medellin(config)#enable secret cisco
Medellin(config)#service password-encryption
Medellin(config)#banner motd "solo se permite el acceso autorizado"
  
```

```
Medellin(config)#line console 0
Medellin(config-line)#password class
Medellin(config-line)#login
Medellin(config-line)#exit
Medellin(config)#line vty 0 15
Medellin(config-line)#password class
Medellin(config-line)#login
Medellin(config-line)#end
Medellin#

PC>
```

Ping realizado de pc0 y pc1 perteneciente a medellin hacia pc4 y server perteneciente a Bogotá.

The screenshot shows a network simulation interface titled "PC0". At the top, there are tabs: Physical, Config, Desktop, and Custom Interface. Below the tabs, there are icons representing network components like switches and hosts. A window titled "Command Prompt" is open, displaying the output of ping commands. The first command is "PC>ping 192.168.1.3", which shows four replies from 192.168.1.3 with times ranging from 1ms to 2ms and TTL=126. It also provides ping statistics: Sent = 4, Received = 4, Lost = 0 (0% loss), with approximate round trip times (Minimum = 1ms, Maximum = 10ms, Average = 3ms). The second command is "PC>ping 192.168.1.2", which shows four replies from 192.168.1.2 with times ranging from 5ms to 16ms and TTL=126. It also provides ping statistics: Sent = 4, Received = 4, Lost = 0 (0% loss), with approximate round trip times (Minimum = 2ms, Maximum = 16ms, Average = 6ms). The prompt "PC>" is visible at the bottom of the window.

```
PC>ping 192.168.1.3
Pinging 192.168.1.3 with 32 bytes of data:
Reply from 192.168.1.3: bytes=32 time=1ms TTL=126
Reply from 192.168.1.3: bytes=32 time=10ms TTL=126
Reply from 192.168.1.3: bytes=32 time=2ms TTL=126
Reply from 192.168.1.3: bytes=32 time=1ms TTL=126

Ping statistics for 192.168.1.3:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 1ms, Maximum = 10ms, Average = 3ms

PC>ping 192.168.1.2
Pinging 192.168.1.2 with 32 bytes of data:
Reply from 192.168.1.2: bytes=32 time=5ms TTL=126
Reply from 192.168.1.2: bytes=32 time=2ms TTL=126
Reply from 192.168.1.2: bytes=32 time=2ms TTL=126
Reply from 192.168.1.2: bytes=32 time=16ms TTL=126

Ping statistics for 192.168.1.2:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
Approximate round trip times in milli-seconds:
    Minimum = 2ms, Maximum = 16ms, Average = 6ms
```

The screenshot shows a software interface for managing network devices. At the top, there's a menu bar with tabs: Physical, Config, Desktop, and Custom Interface. Below the menu is a toolbar with icons. The main area is titled "Command Prompt". Inside the command prompt window, the user has entered several ping commands:

```
PC>ping 192.168.1.3
Pinging 192.168.1.3 with 32 bytes of data:
Reply from 192.168.1.3: bytes=32 time=3ms TTL=126
Reply from 192.168.1.3: bytes=32 time=1ms TTL=126
Reply from 192.168.1.3: bytes=32 time=1ms TTL=126
Reply from 192.168.1.3: bytes=32 time=10ms TTL=126

Ping statistics for 192.168.1.3:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 1ms, Maximum = 10ms, Average = 3ms

PC>ping 192.168.1.2
Pinging 192.168.1.2 with 32 bytes of data:
Reply from 192.168.1.2: bytes=32 time=2ms TTL=126
Reply from 192.168.1.2: bytes=32 time=1ms TTL=126
Reply from 192.168.1.2: bytes=32 time=1ms TTL=126
Reply from 192.168.1.2: bytes=32 time=10ms TTL=126

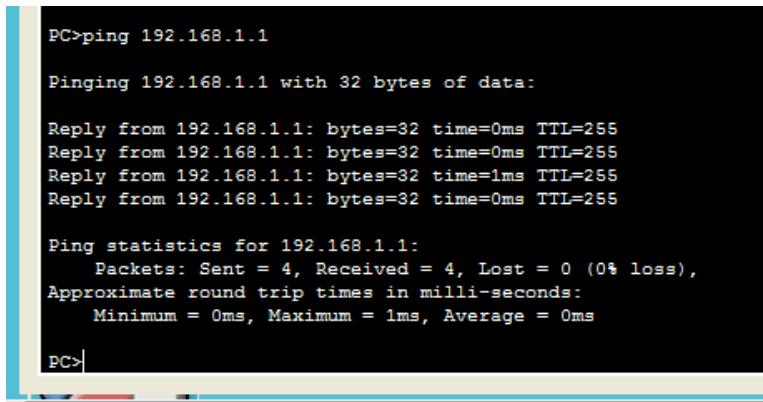

Ping statistics for 192.168.1.2:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 1ms, Maximum = 10ms, Average = 3ms

18. IMAGEN FINAL DE PACKET TRACER ESCENARIO 1

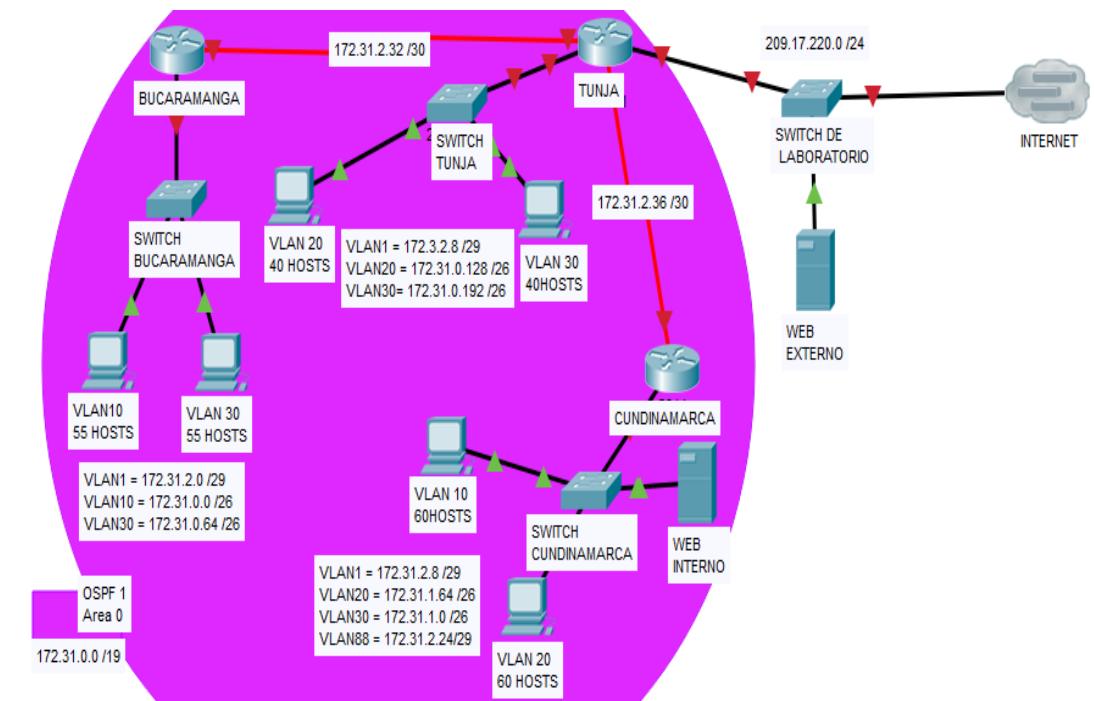

19. Versión de packet tracer

DESARROLLO ESCENARIO 2

Una empresa tiene la conexión a internet en una red Ethernet, lo cual deben adaptarlo para facilitar que sus routers y las redes que incluyen puedan, por esa vía, conectarse a internet, pero empleando las direcciones de la red LAN original.

Desarrollo

Los siguientes son los requerimientos necesarios:

Todos los routers deberán tener los siguiente:

- Configuración básica.
- Autenticación local con AAA.
- Cifrado de contraseñas.
- Un máximo de internos para acceder al router.
- Máximo tiempo de acceso al detectar ataques.
- Establezca un servidor TFTP y almacene todos los archivos necesarios de los routers.

- [1. Configuracion Routers](#)
- Router Cundinamarca

```

Router>en
Router#conf t
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#hostname CUNDINAMARCA
CUNDINAMARCA(config)#no ip domain-lookup

8. Versión de packet tracer para el escenario 2

CONCLUSIONES

- Mediante el desarrollo del diplomado logramos aprender los beneficios de las redes de datos para estar a la vanguardia de la tecnología y estar en la capacidad de dar soluciones a cualquier requerimiento en nuestra vida profesional que tenga que ver con los problemas logísticos de comunicación que se tienen actualmente en las empresas.
- Estos simuladores como lo es packet tracer, el cual utilizamos para desarrollar los trabajos colaborativos anteriores, nos ayudan a evaluar casos de la vida real que nos encontraremos en nuestro entorno profesional dando respuestas acertadas en un entorno seguro como si manejáramos equipos reales.
- Gracias al desarrollo de este taller hemos logrado Identificar cada uno de los dispositivos que intervienen en el proceso de configuración del sistema de redes y su implementación de acuerdo a los requisitos establecido en la guía de actividades prácticas.
- Se logró la configuración de la topología sugerida en la prueba de habilidades, aplicando los conocimientos y habilidades obtenidas durante el Diplomado.
- Mediante la configuración de las listas de acceso, pudimos permitir o denegar el acceso de hosts a algunos servicios ofrecidos en red.
