# Rates Paid for Custom Work in South Dakota

SOUTH DAKOTA  
STATE UNIVERSITY  
FEB 08 1983  
LIBRARY

Ron Thaden,  
Extension area farm specialist, and  
Wallace G. Aanderud,  
Extension farm management specialist

To reduce the amount of money tied up in machinery, many operators consider hiring some of their work done. Custom hire enables farmers to obtain the benefits of high cost, specialized machines without incurring the ownership costs that are difficult to justify on the basis of low annual use.

Owners of these machines and those who hire the use of them are interested in knowing what rates are fair to both parties. One guide is the typical or customary rate that is currently being charged.

This publication shows average rates and the rates most frequently reported for the major custom operations performed on farms and ranches in the state. These are shown for the state as a whole and for six economic areas (see map).

The counties in each economic area have similar agricultural, demographic, and climatic conditions, a logical breakdown to survey custom rates.

Custom rate information was compiled from a detailed questionnaire mailed

through county Extension agents to selected farm operators throughout the state.

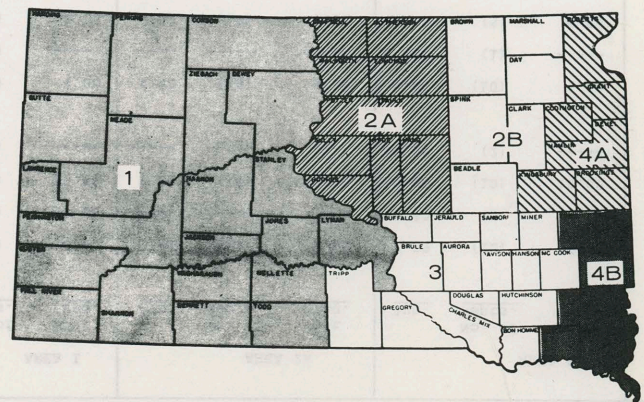

Custom rates include the charges made for the use of the machine, the time of the operator, necessary mechanical power, other supplies furnished--such as tractor fuel, wire or twine for the baler--plus an allowance for risk and overhead. The cost of any material applied (such as seed, chemicals, or fertilizer) is not included.

Custom rates vary considerably, often influenced by the time required to perform the operation. This in turn often depends on:

1. Size, shape, and topography of field.
2. Differences in size and type of equipment.
3. Crop condition and yield.
4. Weather during the season.
5. Competition for custom work in area.
6. Distance to job.
7. Profits expected by custom operator.

The number of reports received for each custom operation is also included in the tables, and by comparison, reflects the extent of custom hire for the different farm operations.

This report makes no attempt to evaluate the fairness of rates currently being charged, nor is it an attempt to establish custom rates for any area of the state. It should be used only as a guide in arriving at a rate agreeable to the custom operator and the farmer who hires his services.

Economic areas of South Dakota for calculating custom hire rates.
