## KATA PENGANTAR

Puji syukur kehadirat Allah SWT atas segenap limpahan rahmat, anugerah dan karunia-Nya sehingga penulis dapat menyelesaikan skripsi yang berjudul **“ISOLASI DAN IDENTIFIKASI BAKTERI SELULOLITIK JERAMI PADI (*Oryza sativa L.*) DAN KAJIAN TEORITIS OPTIMASI PRODUKSI ENZIM SELULASE”**. Skripsi ini diajukan untuk memenuhi salah satu syarat memperoleh gelar Sarjana Sains pada Program Studi Biologi Strata Satu (S1), Fakultas Pendidikan Matematika dan Ilmu Pengetahuan Alam, Universitas Pendidikan Indonesia.

Penulis menyadari bahwa skripsi ini tidak akan terselesaikan tanpa bantuan dari berbagai pihak. Untuk itu, penulis mengucapkan terima kasih dan memberikan penghargaan sebesar-besarnya kepada pihak-pihak yang telah memberikan pengarahan, bantuan dan motivasi kepada penulis. Penulis ucapan terima kasih dengan segala kerendahan hati kepada:

1. Ibu Dr. Hj. Peristiwati, M.Kes. selaku Dosen Pembimbing I yang dengan sabar telah memberikan bimbingan, masukan, saran, dan motivasi selama kegiatan penelitian hingga penyusunan skripsi.
2. Ibu Dr. Hj. Diah Kusumawaty, M.Si. selaku Ketua Program Studi Biologi FPMIPA UPI dan Dosen Pembimbing II yang dengan sabar telah memberikan bimbingan, masukan, saran, dan motivasi selama kegiatan penelitian hingga penyusunan skripsi.
3. Bapak Dr. Bambang Supriatno, M.Si. selaku Ketua Departemen Pendidikan Biologi FPMIPA UPI.
4. Ibu Dr. Hj. Any Fitriani, M.Si. selaku Dosen Wali yang telah membimbing dan memberikan dukungan serta arahan selama perkuliahan.
5. Bapak Prof. Topik Hidayat, M.Si., Ph.D. selaku Kepala Laboratorium Biologi FPMIPA UPI yang telah banyak memberi bimbingan, fasilitas, dan dukungan selama penelitian.
6. Bapak Rahadian Deden Juansah, S.Pd. selaku pranata laboratorium di Laboratorium Riset Bioteknologi yang telah membimbing dan memfasilitasi selama penelitian.

7. Seluruh Dosen Departemen Pendidikan Biologi FPMIPA UPI atas semua ilmu, bimbingan, dan pengalaman yang telah diberikan selama perkuliahan.
8. Seluruh Staf Departemen Pendidikan Biologi FPMIPA UPI atas semua ilmu, bimbingan, dan pengalaman yang telah diberikan kepada penulis selama perkuliahan.

Selain pihak diatas, penulis juga mengucapkan terima kasih kepada kedua orang tua, Ayah Yuyu Rachmat Tayubi, Ibu Emma Maemunah dan Bibi Oom yang selalu memberikan dukungan baik secara moril maupun materil kepada penulis selama melaksanakan Pendidikan di Universitas Pendidikan Indonesia hingga memperoleh gelar Sarjana Sains. Rekan seperjuangan di Laboratorium Riset Bioteknologi FPMIPA UPI, khususnya kepada tim jerami padi (Risya Silky Lutfiyyah, Raden Denisa Artistika, dan Nuraini Mardiyah) untuk segala bantuan, dukungan, dan kerjasama yang telah diberikan kepada penulis selama penelitian dan penyusunan skripsi. Selain itu, teman-teman kelas Biologi C 2016 yang telah bersama-sama selama empat tahun dan telah hadir memberikan kenangan indah dan pertemanan yang sangat berharga.

Penulis menyadari bahwa skripsi ini masih terdapat banyak kekurangan dalam penulisan karena berbagai keterbatasan yang dimiliki. Oleh karena itu, kritik dan saran yang membangun sangat diharapkan demi penyempurnaan dalam penulisan skripsi ini. Namun penulis berharap hasil skripsi ini dapat memberikan manfaat dan sumbangan ilmu pengetahuan yang berguna untuk kemajuan ilmu pengetahuan dan teknologi bagi pembaca.

Bandung, Juli 2020

Penulis

**ISOLASI DAN IDENTIFIKASI BAKTERI SELULOLITIK JERAMI PADI  
(*Oryza sativa L.*) DAN KAJIAN TEORITIS OPTIMASI PRODUKSI  
ENZIM SELULASE**

**ABSTRAK**

Enzim selulase merupakan enzim komersial yang banyak digunakan dalam bidang industri dengan jumlah banyak sehingga mengakibatkan kebutuhan akan enzim selulase terus meningkat dengan rata-rata 5-7% per tahun. Pembuatan enzim selulase diperlukan substrat yang mengandung bahan selulosa, salah satunya berasal dari limbah jerami padi. Selain itu, mikroorganisme yang mampu memproduksi enzim selulase disebut bakteri selulolitik. Bakteri selulolitik ini dapat ditemukan pada jerami padi, karena mendukung lingkungan tempat hidup dan nutrisi bagi bakteri, sementara bakteri dalam mencerna selulosa dengan menghasilkan enzim selulase. Bakteri yang ditemukan pada jerami padi yaitu *Bacillus* sp. dan *Pseudomonas* sp. Pada penelitian ini telah dilakukan identifikasi dan karakterisasi bakteri selulolitik yang berhasil diisolasi dari jerami padi (*Oryza sativa L.*). Seleksi bakteri selulolitik dilakukan dengan menggunakan medium selektif *carboxymethyl cellulose* (CMC) dengan indikasi keberadaan zona bening di sekitar koloni pada bakteri selulolitik. Hasil penelitian diperoleh 4 isolat bakteri selulolitik yaitu isolat J-1, J-2, J-4, dan J-5 yang merupakan bakteri *Pseudomonas* sp. Produksi enzim selulase maksimum akan sangat bergantung pada pH dan suhu optimum bakteri selulolitik *Bacillus* sp. dan *Pseudomonas* sp. Tujuan penelitian studi literatur ini adalah untuk mengetahui pH dan suhu optimum yang dapat menghasilkan enzim selulase tertinggi oleh bakteri selulolitik. Berdasarkan hasil studi literatur, pH optimum bakteri selulolitik *Bacillus* sp. yaitu 6,5 dan suhu optimum 60°C yang menghasilkan aktivitas enzim selulase tertinggi 0,85 U/mL, sedangkan pH optimum bakteri selulolitik *Pseudomonas* sp. adalah 5 dan suhu optimum 37°C yang menghasilkan aktivitas enzim selulase (CMCase) maksimum berkisar 0,48 U/mL.

**Kata Kunci:** Enzim selulase, jerami padi, lignoselulosa, bakteri selulolitik, aktivitas selulolitik

# ISOLATION AND IDENTIFICATION OF CELLULOLYTIC BACTERIA IN RICE STRAW (*Oryza sativa L.*) AND THEORY OF OPTIMIZATION CELLULASE ENZYME PRODUCTION

## ABSTRACT

Cellulase enzymes are commercial enzymes that are widely used in industrial fields with large quantities resulting in the need for cellulase enzymes to continue to increase by an average of 5-7% per year. Cellulase enzyme making is needed substrate containing cellulose material, one of which is derived from rice straw waste. In addition, microorganisms that are able to produce cellulase enzymes are called cellulolytic bacteria. Cellulolytic bacteria can be found in rice straw, because it supports a living environment and nutrients for bacteria, while bacteria digest cellulose by producing cellulase enzymes. Bacteria found in rice straw are *Bacillus* sp. and *Pseudomonas* sp. In this study identification and characterization of cellulolytic bacteria have been isolated from rice straw (*Oryza sativa L.*). Cellulolytic bacterial selection is carried out using a selective *carboxymethyl cellulose* (CMC) medium with an indication of the presence of clear zones around the colony in cellulolytic bacteria. The results obtained by 4 isolates of cellulolytic bacteria namely isolates J-1, J-2, J-4, and J-5 which are *Pseudomonas* sp. Maximum cellulase enzyme production will depend on the optimum pH and temperature of the cellulolytic bacteria *Bacillus* sp. and *Pseudomonas* sp. The purpose of this literature study was to determine the optimum pH and temperature that can produce the highest cellulase enzymes by cellulolytic bacteria. Based on the results of literature studies, the optimum pH and temperature of cellulolytic bacteria *Bacillus* sp. were 6.5 and 60°C which produces the highest cellulase enzyme activity 0.85 U/mL, while the optimum pH of cellulolytic bacteria *Pseudomonas* sp. was 5 and the optimum temperature was 37°C which produces maximum cellulase (CMCase) enzyme activity ranging from 0.48 U/mL.

**Key Words:** Cellulase enzyme, rice straw, cellulolytic bacteria, *pretreatment*, CMCase
