Chapter 1: Interpersonal Communication Processes

Chapter 1: Interpersonal Communication Processes

Taking an interpersonal communication course as an undergraduate is what made me change my major from music to communication studies. I was struck by the clear practicality of key interpersonal communication concepts in my everyday life and in my relationships. I found myself thinking, "Oh, that's what it's called!" or "My mom does that to me all the time!" I hope that you will have similar reactions as we learn more about how we communicate with the people in our daily lives.

## 1.1 Principles of Interpersonal Communication

---

Learning Objectives

1. Define interpersonal communication.
2. Discuss the functional aspects of interpersonal communication.
3. Discuss the cultural aspects of interpersonal communication.

In order to understand interpersonal communication, we must understand how interpersonal communication functions to meet our needs and goals and how our interpersonal communication connects to larger social and cultural systems. **Interpersonal communication** is the process of exchanging messages between people whose lives mutually influence one another in unique ways in relation to social and cultural norms. This definition highlights the fact that interpersonal communication involves two or more people who are interdependent to some degree and who build a unique bond based on the larger social and cultural contexts to which they belong. So a brief exchange with a grocery store clerk who you don't know wouldn't be considered interpersonal communication, because you and the clerk are not influencing each other in significant ways. Obviously, if the clerk were a friend, family member, coworker, or romantic partner, the communication would fall into the interpersonal category. In this section, we discuss the importance of studying interpersonal communication and explore its functional and cultural aspects.

Why Study Interpersonal Communication?

Interpersonal communication has many implications for us in the real world. Did you know that interpersonal communication played an important role in human evolution? Early humans who lived in groups, rather than alone, were more likely to survive, which meant that those with the capability to develop interpersonal bonds were more likely to pass these traits on to the next generation (Leary, 2001). Did you know that interpersonal skills have a measurable impact on psychological and physical health? People with higher levels of interpersonal communication skills are better able to adapt to stress, have greater satisfaction in relationships and more friends, and have less depression and anxiety (Hargie, 2011). In fact, prolonged isolation has been shown to severely damage a human (Williams & Zadro, 2001). Have you ever heard of the boy or girl who was raised by wolves? There have been documented cases of abandoned or neglected children, sometimes referred to as feral children, who survived using their animalistic instincts but suffered psychological and physical trauma as a result of their isolation (Candland, 1995). There are also examples of solitary confinement, which has become an ethical issue in many countries. In "supermax" prisons, which now operate in at least forty-four states, prisoners spend 22.5 to 24 hours a day in their cells and have no contact with the outside world or other prisoners (Shalev, 2011).
Solitary confinement is common in supermax prisons, where prisoners spend 22.5 to 24 hours a day in their cells.

Jmiller291 – Solitary Confinement, Old Geelong Gaol 7 – CC BY 2.0.

Aside from making your relationships and health better, interpersonal communication skills are highly sought after by potential employers, consistently ranking in the top ten in national surveys (National Association of Colleges and Employers, 2010). Each of these examples illustrates how interpersonal communication meets our basic needs as humans for security in our social bonds, health, and careers. But we are not born with all the interpersonal communication skills we'll need in life. So in order to make the most out of our interpersonal relationships, we must learn some basic principles.

Think about a time when a short communication exchange affected a relationship almost immediately. Did you mean for it to happen? Many times we engage in interpersonal communication to fulfill certain goals we may have, but sometimes we are more successful than others. This is because interpersonal communication is strategic, meaning we intentionally create messages to achieve certain goals that help us function in society and our relationships. Goals vary based on the situation and the communicators, but ask yourself if you are generally successful at achieving the goals with which you enter a conversation or not. If so, you may already possess a high degree of **interpersonal communication competence**, or the ability to communicate effectively and appropriately in personal relationships. This chapter will help you understand some key processes that can make us more effective and appropriate communicators. You may be asking, "Aren't effectiveness and appropriateness the same thing?" The answer is no. Imagine that you are the manager of a small department of employees at a marketing agency where you often have to work on deadlines. As a deadline approaches, you worry about your team's ability to work without your supervision to complete the tasks, so you interrupt everyone's work and assign them all individual tasks and give them a bulleted list of each subtask with a deadline to turn each part in to you. You meet the deadline and have effectively accomplished your goal. Over the next month, one of your employees puts in her two-weeks' notice, and you learn that she and a few others have been talking about how they struggle to work with you as a manager. Although your strategy was effective, many people do not respond

well to strict hierarchy or micromanaging and may have deemed your communication inappropriate. A more competent communicator could have implemented the same detailed plan to accomplish the task in a manner that included feedback, making the employees feel more included and heard. In order to be competent interpersonal communicators, we must learn to balance being effective and appropriate.

Functional Aspects of Interpersonal Communication

We have different needs that are met through our various relationships. Whether we are aware of it or not, we often ask ourselves, "What can this relationship do for me?" In order to understand how relationships achieve strategic functions, we will look at instrumental goals, relationship-maintenance goals, and self-presentation goals.

What motivates you to communicate with someone? We frequently engage in communication designed to achieve instrumental goals such as gaining compliance (getting someone to do something for us), getting information we need, or asking for support (Burleson, Metts, & Kirch, 2000). In short, instrumental talk helps us "get things done" in our relationships. Our instrumental goals can be long term or day to day. The following are examples of communicating for instrumental goals:

- You ask your friend to help you move this weekend (gaining/resisting compliance).
- You ask your coworker to remind you how to balance your cash register till at the end of your shift (requesting or presenting information).
- You console your roommate after he loses his job (asking for or giving support).

When we communicate to achieve relational goals, we are striving to maintain a positive relationship. Engaging in relationship-maintenance communication is like taking your car to be serviced at the repair shop. To have a good relationship, just as to have a long-lasting car, we should engage in routine maintenance. For example, have you ever wanted to stay in and order a pizza and watch a movie, but your friend suggests that you go to a local restaurant and then to the theatre? Maybe you don't feel like being around a lot of people or spending money (or changing out of your pajamas), but you decide to go along with his or her suggestion. In that moment, you are putting your relational partner's needs above your own, which will likely make him or her feel valued. It is likely that your friend has made or will also make similar concessions to put your needs first, which indicates that there is a satisfactory and complimentary relationship. Obviously, if one partner always insists on having his or her way or always concedes, becoming the martyr, the individuals are not exhibiting interpersonal-communication competence. Other routine relational tasks include celebrating special occasions or honoring accomplishments, spending time together, and checking in regularly by phone, e-mail, text, social media, or face-to-face communication. The following are examples of communicating for relational goals:

- You organize an office party for a coworker who has just become a US citizen (celebrating/honoring accomplishments).
- You make breakfast with your mom while you are home visiting (spending time together).
- You post a message on your long-distance friend's Facebook wall saying you miss him (checking in).

Gathering to celebrate a colleague's birthday is a good way for coworkers to achieve relational goals in the workplace.

Twingly – Happy b-day – CC BY 2.0.

Another form of relational talk that I have found very useful is what I call the **DTR talk**, which stands for "defining-the-relationship talk" and serves a relationship-maintenance function. In the early stages of a romantic relationship, you may have a DTR talk to reduce uncertainty about where you stand by deciding to use the term *boyfriend, girlfriend,* or *partner*. In a DTR talk, you may proactively define your relationship by saying, "I'm glad I'm with you and no one else." Your romantic interest may respond favorably, echoing or rephrasing your statement, which gives you an indication that he or she agrees with you. The talk may continue on from there, and you may talk about what to call your relationship, set boundaries, or not. It is not unusual to have several DTR talks as a relationship progresses. At times, you may have to define the relationship when someone steps over a line by saying, "I think we should just be friends." This more explicit and reactive (rather than proactive) communication can be especially useful in situations where a relationship may be unethical, inappropriate, or create a conflict of interest—for example, in a supervisor-supervisee, mentor-mentee, professional-client, or collegial relationship.

We also pursue self-presentation goals by adapting our communication in order to be perceived in particular ways. Just as many companies, celebrities, and politicians create a public image, we desire to present different faces in different contexts. The well-known scholar Erving Goffman compared self-presentation to a performance and suggested we all perform different roles in different contexts (Goffman, 1959). Indeed, competent communicators can successfully manage how others perceive them by adapting to situations and contexts. A parent may perform the role of stern head of household, supportive shoulder to cry on, or hip and culturally aware friend to his or her child. A newly hired employee may initially perform the role of serious and agreeable coworker. Sometimes people engage in communication that doesn't necessarily present them in a positive way. For example, Haley, the oldest daughter in the television show *Modern Family*, often presents herself as incapable in order to get her parents to do her work. In one episode she pretended she didn't know how to crack open an egg so her mom Claire

would make the brownies for her school bake sale. Here are some other examples of communicating to meet self-presentation goals:

- As your boss complains about struggling to format the company newsletter, you tell her about your experience with Microsoft Word and editing and offer to look over the newsletter once she's done to fix the formatting (presenting yourself as competent).

- You and your new college roommate stand in your dorm room full of boxes. You let him choose which side of the room he wants and then invite him to eat lunch with you (presenting yourself as friendly).

- You say, "I don't know," in response to a professor's question even though you have an idea of the answer (presenting yourself as aloof, or "too cool for school").

"Getting Real"

Image Consultants

The Association of Image Consultants International (AICI) states that appearance, behavior, and communication are the "ABC's of image." Many professional image consultants are licensed by this organization and provide a variety of services to politicians, actors, corporate trainers, public speakers, organizations, corporations, and television personalities such as news anchors.[1] Visit the AICI's website (http://www.aici.org/About_Image_Consulting/Image_Consulting.htm) and read about image consulting, including the "How to Choose," "How to Become," and "FAQs" sections. Then consider the following questions:

1. If you were to hire an image consultant for yourself, what would you have them "work on" for you? Why?
2. What communication skills that you've learned about in the book so far would be most important for an image consultant to possess?
3. Many politicians use image consultants to help them connect to voters and win elections. Do you think this is ethical? Why or why not?

As if managing instrumental, relational, and self-presentation goals isn't difficult enough when we consider them individually, we must also realize that the three goal types are always working together. In some situations we may privilege instrumental goals over relational or self-presentation goals. For example, if your partner is offered a great job in another state and you decided to go with him or her, which will move you away from your job and social circle, you would be focusing on relational goals over instrumental or self-presentation goals. When you're facing a stressful situation and need your best friend's help and call saying, "Hurry and bring me a gallon of gas or I'm going to be late to work!" you are privileging instrumental goals over relational goals. Of course, if the person really is your best friend, you can try to smooth things over or make up for your shortness later. However, you probably wouldn't call your boss and bark a request to bring you a gallon of gas so you can get to work, because you likely want your boss to see you as dependable and likable, meaning you have focused on self-presentation goals.

The functional perspective of interpersonal communication indicates that we communicate to achieve certain goals in our relationships. We get things done in our relationships by communicating for instrumental goals. We maintain positive relationships through relational goals. We also strategically present ourselves in order to

---

1. "About Image Consulting," Association of Image Consultants International webpage, accessed June 3, 2011, http://www.aici.org/About_Image_Consulting/ Image_Consulting.htm.

be perceived in particular ways. As our goals are met and our relationships build, they become little worlds we inhabit with our relational partners, complete with their own relationship cultures.

Cultural Aspects of Interpersonal Communication

A side from functional aspects of interpersonal communication, communicating in relationships also helps establish relationship cultures. Just as large groups of people create cultures through shared symbols (language), values, and rituals, people in relationships also create cultures at a smaller level. **Relationship cultures** are the climates established through interpersonal communication that are unique to the relational partners but based on larger cultural and social norms. We also enter into new relationships with expectations based on the schemata we have developed in previous relationships and learned from our larger society and culture. Think of **relationship schemata** as blueprints or plans that show the inner workings of a relationship. Just like a schematic or diagram for assembling a new computer desk helps you put it together, relationship schemata guide us in how we believe our interpersonal relationships should work and how to create them. So from our life experiences in our larger cultures, we bring building blocks, or expectations, into our relationships, which fundamentally connect our relationships to the outside world (Burleson, Metts, & Kirch, 2000). Even though we experience our relationships as unique, they are at least partially built on preexisting cultural norms.

Some additional communicative acts that create our relational cultures include relational storytelling, personal idioms, routines and rituals, and rules and norms. Storytelling is an important part of how we create culture in larger contexts and how we create a uniting and meaningful storyline for our relationships. In fact, an anthropologist coined the term *homo narrans* to describe the unique storytelling capability of modern humans (Fisher, 1985). We often rely on relationship storytelling to create a sense of stability in the face of change, test the compatibility of potential new relational partners, or create or maintain solidarity in established relationships. Think of how you use storytelling among your friends, family, coworkers, and other relational partners. If you recently moved to a new place for college, you probably experienced some big changes. One of the first things you started to do was reestablish a social network—remember, human beings are fundamentally social creatures. As you began to encounter new people in your classes, at your new job, or in your new housing, you most likely told some stories of your life before—about your friends, job, or teachers back home. One of the functions of this type of storytelling, early in forming interpersonal bonds, is a test to see if the people you are meeting have similar stories or can relate to your previous relationship cultures. In short, you are testing the compatibility of your schemata with the new people you encounter. Although storytelling will continue to play a part in your relational development with these new people, you may be surprised at how quickly you start telling stories with your new friends about things that have happened since you met. You may recount stories about your first trip to the dance club together, the weird geology professor you had together, or the time you all got sick from eating the cafeteria food. In short, your old stories will start to give way to new stories that you've created. Storytelling within relationships helps create solidarity, or a sense of belonging and closeness. This type of storytelling can be especially meaningful for relationships that don't fall into the dominant culture. For example, research on a gay male friendship circle found that the gay men retold certain dramatic stories frequently to create a sense of belonging and to also bring in new members to the group (Jones Jr., 2007).

We also create personal idioms in our relationships (Bell & Healey, 1992). If you've ever studied foreign languages, you know that idiomatic expressions like "I'm under the weather today" are basically nonsense when

translated. For example, the equivalent of this expression in French translates to "I'm not in my plate today." When you think about it, it doesn't make sense to use either expression to communicate that you're sick, but the meaning would not be lost on English or French speakers, because they can decode their respective idiom. This is also true of idioms we create in our interpersonal relationships. Just as idioms are unique to individual cultures and languages, **personal idioms** are unique to certain relationships, and they create a sense of belonging due to the inside meaning shared by the relational partners. In romantic relationships, for example, it is common for individuals to create nicknames for each other that may not directly translate for someone who overhears them. You and your partner may find that calling each other "booger" is sweet, while others may think it's gross. Researchers have found that personal idioms are commonly used in the following categories: activities, labels for others, requests, and sexual references (Bell & Healey, 1992). The recent cultural phenomenon *Jersey Shore* on MTV has given us plenty of examples of personal idioms created by the friends on the show. *GTL* is an activity idiom that stands for "gym, tan, laundry"—a common routine for the cast of the show. There are many examples of idioms labeling others, including *grenade* for an unattractive female, *gorilla juice head* for a very muscular man, and *backpack* for a clingy boyfriend/girlfriend or a clingy person at a club. There are also many idioms for sexual references, such as *smush,* meaning to hook up / have sex, and *smush room,* which is the room set aside for these activities (Benigno, 2010). Idioms help create cohesiveness, or solidarity in relationships, because they are shared cues between cultural insiders. They also communicate the uniqueness of the relationship and create boundaries, since meaning is only shared within the relationship.

Routines and rituals help form relational cultures through their natural development in repeated or habitual interaction (Burleson, Metts, & Kirch, 2000). While "routine" may connote boring in some situations, **relationship routines** are communicative acts that create a sense of predictability in a relationship that is comforting. Some communicative routines may develop around occasions or conversational topics.

For example, it is common for long-distance friends or relatives to schedule a recurring phone conversation or for couples to review the day's events over dinner. When I studied abroad in Sweden, my parents and I talked on the phone at the same time every Sunday, which established a comfortable routine for us. Other routines develop around entire conversational episodes. For example, two best friends recounting their favorite spring-break story may seamlessly switch from one speaker to the other, finish each other's sentences, speak in unison, or gesture simultaneously because they have told the story so many times. **Relationship rituals** take on more symbolic meaning than do relationship routines and may be variations on widely recognized events—such as birthdays, anniversaries, Passover, Christmas, or Thanksgiving—or highly individualized and original. Relational partners may personalize their traditions by eating mussels and playing Yahtzee on Christmas Eve or going hiking on their anniversary. Other rituals may be more unique to the relationship, such as celebrating a dog's birthday or going to opening day at the amusement park. The following highly idiosyncratic ritual was reported by a participant in a research study:

I would check my husband's belly button for fuzz on a daily basis at bedtime. It originated when I noticed some blanket fuzz in his belly button one day and thought it was funny…We both found it funny and teased often about the fuzz. If there wasn't any fuzz for a few days my husband would put some in his belly button for me to find. It's been happening for about 10 years now (Bruess & Pearson, 1997).

A couple may share a relationship routine of making dinner together every Saturday night.

Free Stock Photos – Cooking – public domain.

Whether the routines and rituals involve phone calls, eating certain foods, or digging for belly button fuzz, they all serve important roles in building relational cultures. However, as with storytelling, rituals and routines can be negative. For example, verbal and nonverbal patterns to berate or belittle your relational partner will not have healthy effects on a relational culture. Additionally, visiting your in-laws during the holidays loses its symbolic value when you dislike them and comply with the ritual because you feel like you have to. In this case, the ritual doesn't enrich the relational culture, but it may reinforce norms or rules that have been created in the relationship.

Relationship rules and norms help with the daily function of the relationship. They help create structure and provide boundaries for interacting in the relationship and for interacting with larger social networks (Burleson, Metts, & Kirch, 2000). Relationship rules are explicitly communicated guidelines for what should and should not be done in certain contexts. A couple could create a rule to always confer with each other before letting their child spend the night somewhere else. If a mother lets her son sleep over at a friend's house without consulting her partner, a more serious conflict could result. Relationship norms are similar to routines and rituals in that they develop naturally in a relationship and generally conform to or are adapted from what is expected and acceptable in the larger culture or society. For example, it may be a norm that you and your coworkers do not "talk shop" at your Friday happy-hour gathering. So when someone brings up work at the gathering, his coworkers may remind him that there's no shop talk, and the consequences may not be that serious. In regards to topic of conversation, norms often guide expectations of what subjects are appropriate within various relationships. Do you talk to

your boss about your personal finances? Do you talk to your father about your sexual activity? Do you tell your classmates about your medical history? In general, there are no rules that say you can't discuss any of these topics with anyone you choose, but relational norms usually lead people to answer "no" to the questions above. Violating relationship norms and rules can negatively affect a relationship, but in general, rule violations can lead to more direct conflict, while norm violations can lead to awkward social interactions. Developing your interpersonal communication competence will help you assess your communication in relation to the many rules and norms you will encounter.

Key Takeaways

- Getting integrated: Interpersonal communication occurs between two or more people whose lives are interdependent and mutually influence one another. These relationships occur in academic, professional, personal, and civic contexts, and improving our interpersonal communication competence can also improve our physical and psychological health, enhance our relationships, and make us more successful in our careers.

- There are functional aspects of interpersonal communication.

  ◦ We "get things done" in our relationships by communicating for instrumental goals such as getting someone to do something for us, requesting or presenting information, and asking for or giving support.

  ◦ We maintain our relationships by communicating for relational goals such as putting your relational partner's needs before your own, celebrating accomplishments, spending time together, and checking in.

  ◦ We strategically project ourselves to be perceived in particular ways by communicating for self-presentation goals such as appearing competent or friendly.

- There are cultural aspects of interpersonal communication.

  ◦ We create relationship cultures based on the relationship schemata we develop through our interactions with our larger society and culture.

  ◦ We engage in relationship storytelling to create a sense of stability in the face of change, to test our compatibility with potential relational partners, and to create a sense of solidarity and belonging in established relationships.

  ◦ We create personal idioms such as nicknames that are unique to our particular relationship and are unfamiliar to outsiders to create cohesiveness and solidarity.

  ◦ We establish relationship routines and rituals to help establish our relational culture and bring a sense of comfort and predictability to our relationships.

Exercises

1. Getting integrated: In what ways might interpersonal communication competence vary among academic, professional, and civic contexts? What competence skills might be more or less important in one context than in another?

2. Recount a time when you had a DTR talk. At what stage in the relationship was the talk? What motivated

you or the other person to initiate the talk? What was the result of the talk?

3. Pick an important relationship and describe its relationship culture. When the relationship started, what relationship schemata guided your expectations? Describe a relationship story that you tell with this person or about this person. What personal idioms do you use? What routines and rituals do you observe? What norms and rules do you follow?

1.2 Conflict and Interpersonal Communication

<div>

Learning Objectives

1. Define interpersonal conflict.
2. Compare and contrast the five styles of interpersonal conflict management.
3. Explain how perception and culture influence interpersonal conflict.
4. List strategies for effectively managing conflict.

</div>

Who do you have the most conflict with right now? Your answer to this question probably depends on the various contexts in your life. If you still live at home with a parent or parents, you may have daily conflicts with your family as you try to balance your autonomy, or desire for independence, with the practicalities of living under your family's roof. If you've recently moved away to go to college, you may be negotiating roommate conflicts as you adjust to living with someone you may not know at all. You probably also have experiences managing conflict in romantic relationships and in the workplace. So think back and ask yourself, "How well do I handle conflict?" As with all areas of communication, we can improve if we have the background knowledge to identify relevant communication phenomena and the motivation to reflect on and enhance our communication skills.

Interpersonal conflict occurs in interactions where there are real or perceived incompatible goals, scarce resources, or opposing viewpoints. Interpersonal conflict may be expressed verbally or nonverbally along a continuum ranging from a nearly imperceptible cold shoulder to a very obvious blowout. Interpersonal conflict is, however, distinct from interpersonal violence, which goes beyond communication to include abuse. Domestic violence is a serious issue and is discussed in the section "The Dark Side of Relationships."

Interpersonal conflict is distinct from interpersonal violence, which goes beyond communication to include abuse.

Conflict is an inevitable part of close relationships and can take a negative emotional toll. It takes effort to ignore someone or be passive aggressive, and the anger or guilt we may feel after blowing up at someone are valid negative feelings. However, conflict isn't always negative or unproductive. In fact, numerous research studies have shown that quantity of conflict in a relationship is not as important as how the conflict is handled (Markman et al., 1993). Additionally, when conflict is well managed, it has the potential to lead to more rewarding and satisfactory relationships (Canary & Messman, 2000).

Improving your competence in dealing with conflict can yield positive effects in the real world. Since conflict is present in our personal and professional lives, the ability to manage conflict and negotiate desirable outcomes can help us be more successful at both. Whether you and your partner are trying to decide what brand of flat-screen television to buy or discussing the upcoming political election with your mother, the potential for conflict is present. In professional settings, the ability to engage in conflict management, sometimes called conflict resolution, is a necessary and valued skill. However, many professionals do not receive training in conflict management even though they are expected to do it as part of their job (Gates, 2006). A lack of training and a lack of competence could be a recipe for disaster, which is illustrated in an episode of *The Office* titled "Conflict Resolution." In the episode, Toby, the human-resources officer, encourages office employees to submit anonymous complaints about their coworkers. Although Toby doesn't attempt to resolve the conflicts, the employees feel like they are being heard. When Michael, the manager, finds out there is unresolved conflict, he makes the anonymous complaints public in an attempt to encourage resolution, which backfires, creating more conflict within the office. As usual, Michael doesn't demonstrate communication competence; however, there are career paths for people who do have an interest in or talent for conflict management. In fact, being a mediator was

named one of the best careers for 2011 by *U.S. News and World Report*.[1] Many colleges and universities now offer undergraduate degrees, graduate degrees, or certificates in conflict resolution, such as this one at the University of North Carolina Greensboro: http://conflictstudies.uncg.edu/site. Being able to manage conflict situations can make life more pleasant rather than letting a situation stagnate or escalate. The negative effects of poorly handled conflict could range from an awkward last few weeks of the semester with a college roommate to violence or divorce. However, there is no absolute right or wrong way to handle a conflict. Remember that being a competent communicator doesn't mean that you follow a set of absolute rules. Rather, a competent communicator assesses multiple contexts and applies or adapts communication tools and skills to fit the dynamic situation.
Conflict Management Styles

Would you describe yourself as someone who prefers to avoid conflict? Do you like to get your way? Are you good at working with someone to reach a solution that is mutually beneficial? Odds are that you have been in situations where you could answer yes to each of these questions, which underscores the important role context plays in conflict and conflict management styles in particular. The way we view and deal with conflict is learned and contextual. Is the way you handle conflicts similar to the way your parents handle conflict? If you're of a certain age, you are likely predisposed to answer this question with a certain "No!" It wasn't until my late twenties and early thirties that I began to see how similar I am to my parents, even though I, like many, spent years trying to distinguish myself from them. Research does show that there is intergenerational transmission of traits related to conflict management. As children, we test out different conflict resolution styles we observe in our families with our parents and siblings. Later, as we enter adolescence and begin developing platonic and romantic relationships outside the family, we begin testing what we've learned from our parents in other settings. If a child has observed and used negative conflict management styles with siblings or parents, he or she is likely to exhibit those behaviors with non–family members (Reese-Weber & Bartle-Haring, 1998).

There has been much research done on different types of conflict management styles, which are communication strategies that attempt to avoid, address, or resolve a conflict. Keep in mind that we don't always consciously choose a style. We may instead be caught up in emotion and become reactionary. The strategies for more effectively managing conflict that will be discussed later may allow you to slow down the reaction process, become more aware of it, and intervene in the process to improve your communication. A powerful tool to mitigate conflict is information exchange. Asking for more information before you react to a conflict-triggering event is a good way to add a buffer between the trigger and your reaction. Another key element is whether or not a communicator is oriented toward self-centered or other-centered goals. For example, if your goal is to "win" or make the other person "lose," you show a high concern for self and a low concern for other. If your goal is to facilitate a "win/win" resolution or outcome, you show a high concern for self and other. In general, strategies that facilitate information exchange and include concern for mutual goals will be more successful at managing conflict (Sillars, 1980).

The five strategies for managing conflict we will discuss are competing, avoiding, accommodating, compromising, and collaborating. Each of these conflict styles accounts for the concern we place on self versus other (see Figure 6.1 "Five Styles of Interpersonal Conflict Management").

---

Figure 6.1 Five Styles of Interpersonal Conflict Management

In order to better understand the elements of the five styles of conflict management, we will apply each to the follow scenario. Rosa and D'Shaun have been partners for seventeen years. Rosa is growing frustrated because D'Shaun continues to give money to their teenage daughter, Casey, even though they decided to keep the teen on a fixed allowance to try to teach her more responsibility. While conflicts regarding money and child rearing are very common, we will see the numerous ways that Rosa and D'Shaun could address this problem.

Competing

The **competing** style indicates a high concern for self and a low concern for other. When we compete, we are striving to "win" the conflict, potentially at the expense or "loss" of the other person. One way we may gauge our win is by being granted or taking concessions from the other person. For example, if D'Shaun gives Casey extra money behind Rosa's back, he is taking an indirect competitive route resulting in a "win" for him because he got his way. The competing style also involves the use of power, which can be noncoercive or coercive (Sillars, 1980). Noncoercive strategies include requesting and persuading. When requesting, we suggest the conflict partner change a behavior. Requesting doesn't require a high level of information exchange. When we persuade, however, we give our conflict partner reasons to support our request or suggestion, meaning there is more information exchange, which may make persuading more effective than requesting. Rosa could try to persuade D'Shaun to stop giving Casey extra allowance money by bringing up their fixed budget or reminding him that they are saving for a summer vacation. Coercive strategies violate standard guidelines for ethical communication and may include aggressive communication directed at rousing your partner's emotions through insults, profanity, and yelling, or through threats of punishment if you do not get your way. If Rosa is the primary income earner in the family, she could use that power to threaten to take D'Shaun's ATM card away if he continues giving Casey money. In all these scenarios, the "win" that could result is only short term and can lead to conflict escalation. Interpersonal conflict is rarely isolated, meaning there can be ripple effects that connect the current conflict to previous and future conflicts. D'Shaun's behind-the-scenes money giving or Rosa's confiscation of the ATM card could lead to built-up negative emotions that could further test their relationship.

Competing has been linked to aggression, although the two are not always paired. If assertiveness does not

work, there is a chance it could escalate to hostility. There is a pattern of verbal escalation: requests, demands, complaints, angry statements, threats, harassment, and verbal abuse (Johnson & Roloff, 2000). Aggressive communication can become patterned, which can create a volatile and hostile environment. The reality television show *The Bad Girls Club* is a prime example of a chronically hostile and aggressive environment. If you do a Google video search for clips from the show, you will see yelling, screaming, verbal threats, and some examples of physical violence. The producers of the show choose houseguests who have histories of aggression, and when the "bad girls" are placed in a house together, they fall into typical patterns, which creates dramatic television moments. Obviously, living in this type of volatile environment would create stressors in any relationship, so it's important to monitor the use of competing as a conflict resolution strategy to ensure that it does not lapse into aggression.

The competing style of conflict management is not the same thing as having a competitive personality. Competition in relationships isn't always negative, and people who enjoy engaging in competition may not always do so at the expense of another person's goals. In fact, research has shown that some couples engage in competitive shared activities like sports or games to maintain and enrich their relationship (Dindia & Baxter, 1987). And although we may think that competitiveness is gendered, research has often shown that women are just as competitive as men (Messman & Mikesell, 2000).

Avoiding

The **avoiding** style of conflict management often indicates a low concern for self and a low concern for other, and no direct communication about the conflict takes place. However, as we will discuss later, in some cultures that emphasize group harmony over individual interests, and even in some situations in the United States, avoiding a conflict can indicate a high level of concern for the other. In general, avoiding doesn't mean that there is no communication about the conflict. Remember, *you cannot not communicate*. Even when we try to avoid conflict, we may intentionally or unintentionally give our feelings away through our verbal and nonverbal communication. Rosa's sarcastic tone as she tells D'Shaun that he's "Soooo good with money!" and his subsequent eye roll both bring the conflict to the surface without specifically addressing it. The avoiding style is either passive or indirect, meaning there is little information exchange, which may make this strategy less effective than others. We may decide to avoid conflict for many different reasons, some of which are better than others. If you view the conflict as having little importance to you, it may be better to ignore it. If the person you're having conflict with will only be working in your office for a week, you may perceive a conflict to be temporary and choose to avoid it and hope that it will solve itself. If you are not emotionally invested in the conflict, you may be able to reframe your perspective and see the situation in a different way, therefore resolving the issue. In all these cases, avoiding doesn't really require an investment of time, emotion, or communication skill, so there is not much at stake to lose.

Avoidance is not always an easy conflict management choice, because sometimes the person we have conflict with isn't a temp in our office or a weekend houseguest. While it may be easy to tolerate a problem when you're not personally invested in it or view it as temporary, when faced with a situation like Rosa and D'Shaun's, avoidance would just make the problem worse. For example, avoidance could first manifest as changing the subject, then progress from avoiding the issue to avoiding the person altogether, to even ending the relationship.

Indirect strategies of hinting and joking also fall under the avoiding style. While these indirect avoidance strategies may lead to a buildup of frustration or even anger, they allow us to vent a little of our built-up steam and may make a conflict situation more bearable. When we hint, we drop clues that we hope our partner will find and piece together to see the problem and hopefully change, thereby solving the problem without any direct communication. In almost all the cases of hinting that I have experienced or heard about, the person dropping the hints overestimates their partner's detective abilities. For example, when Rosa leaves the bank statement on the kitchen table in hopes that D'Shaun will realize how much extra money he is giving Casey, D'Shaun may simply ignore it or even get irritated with Rosa for not putting the statement with all the other mail. We also overestimate our partner's ability to decode the jokes we make about a conflict situation. It is more likely that the receiver of the jokes will think you're genuinely trying to be funny or feel provoked or insulted than realize the conflict situation that you are referencing. So more frustration may develop when the hints and jokes are not decoded, which often leads to a more extreme form of hinting/joking: passive-aggressive behavior.

Passive-aggressive behavior is a way of dealing with conflict in which one person indirectly communicates their negative thoughts or feelings through nonverbal behaviors, such as not completing a task. For example, Rosa may wait a few days to deposit money into the bank so D'Shaun can't withdraw it to give to Casey, or D'Shaun may cancel plans for a romantic dinner because he feels like Rosa is questioning his responsibility with money. Although passive-aggressive behavior can feel rewarding in the moment, it is one of the most unproductive ways to deal with conflict. These behaviors may create additional conflicts and may lead to a cycle of passive-aggressiveness in which the other partner begins to exhibit these behaviors as well, while never actually addressing the conflict that originated the behavior. In most avoidance situations, both parties lose. However, as noted above, avoidance can be the most appropriate strategy in some situations—for example, when the conflict is temporary, when the stakes are low or there is little personal investment, or when there is the potential for violence or retaliation.

Accommodating

The **accommodating** conflict management style indicates a low concern for self and a high concern for other and is often viewed as passive or submissive, in that someone complies with or obliges another without providing personal input. The context for and motivation behind accommodating play an important role in whether or not it is an appropriate strategy. Generally, we accommodate because we are being generous, we are obeying, or we are yielding (Bobot, 2010). If we are being generous, we accommodate because we genuinely want to; if we are obeying, we don't have a choice but to accommodate (perhaps due to the potential for negative consequences or punishment); and if we yield, we may have our own views or goals but give up on them due to fatigue, time constraints, or because a better solution has been offered. Accommodating can be appropriate when there is little chance that our own goals can be achieved, when we don't have much to lose by accommodating, when we feel we are wrong, or when advocating for our own needs could negatively affect the relationship (Isenhart & Spangle, 2000). The occasional accommodation can be useful in maintaining a relationship—remember earlier we discussed putting another's needs before your own as a way to achieve relational goals. For example, Rosa may say, "It's OK that you gave Casey some extra money; she did have to spend more on gas this week since the prices went up." However, being a team player can slip into being a pushover, which people generally do not appreciate. If Rosa keeps telling D'Shaun, "It's OK this time," they may find themselves short on spending money at the end

of the month. At that point, Rosa and D'Shaun's conflict may escalate as they question each other's motives, or the conflict may spread if they direct their frustration at Casey and blame it on her irresponsibility.

Research has shown that the accommodating style is more likely to occur when there are time restraints and less likely to occur when someone does not want to appear weak (Cai & Fink, 2002). If you're standing outside the movie theatre and two movies are starting, you may say, "Let's just have it your way," so you don't miss the beginning. If you're a new manager at an electronics store and an employee wants to take Sunday off to watch a football game, you may say no to set an example for the other employees. As with avoiding, there are certain cultural influences we will discuss later that make accommodating a more effective strategy.

Compromising

The **compromising** style shows a moderate concern for self and other and may indicate that there is a low investment in the conflict and/or the relationship. Even though we often hear that the best way to handle a conflict is to compromise, the compromising style isn't a win/win solution; it is a partial win/lose. In essence, when we compromise, we give up some or most of what we want. It's true that the conflict gets resolved temporarily, but lingering thoughts of what you gave up could lead to a future conflict. Compromising may be a good strategy when there are time limitations or when prolonging a conflict may lead to relationship deterioration. Compromise may also be good when both parties have equal power or when other resolution strategies have not worked (Macintosh & Stevens, 2008).
Compromising may help conflicting parties come to a resolution, but neither may be completely satisfied if they each had to give something up.

A negative of compromising is that it may be used as an easy way out of a conflict. The compromising style is most effective when both parties find the solution agreeable. Rosa and D'Shaun could decide that Casey's allowance does need to be increased and could each give ten more dollars a week by committing to taking their lunch to work twice a week instead of eating out. They are both giving up something, and if neither of them have a problem with taking their lunch to work, then the compromise was equitable. If the couple agrees that the twenty extra dollars a week should come out of D'Shaun's golf budget, the compromise isn't as equitable, and D'Shaun, although he agreed to the compromise, may end up with feelings of resentment. Wouldn't it be better to both win?

Collaborating

The **collaborating** style involves a high degree of concern for self and other and usually indicates investment in the conflict situation and the relationship. Although the collaborating style takes the most work in terms of communication competence, it ultimately leads to a win/win situation in which neither party has to make concessions because a mutually beneficial solution is discovered or created. The obvious advantage is that both parties are satisfied, which could lead to positive problem solving in the future and strengthen the overall relationship. For example, Rosa and D'Shaun may agree that Casey's allowance needs to be increased and may decide to give her twenty more dollars a week in exchange for her babysitting her little brother one night a week. In this case, they didn't make the conflict personal but focused on the situation and came up with a solution that may end up saving them money. The disadvantage is that this style is often time consuming, and only one person may be willing to use this approach while the other person is eager to compete to meet their goals or willing to accommodate.

Here are some tips for collaborating and achieving a win/win outcome (Hargie, 2011):

- Do not view the conflict as a contest you are trying to win.
- Remain flexible and realize there are solutions yet to be discovered.
- Distinguish the people from the problem (don't make it personal).
- Determine what the underlying needs are that are driving the other person's demands (needs can still be met through different demands).
- Identify areas of common ground or shared interests that you can work from to develop solutions.
- Ask questions to allow them to clarify and to help you understand their perspective.
- Listen carefully and provide verbal and nonverbal feedback.

"Getting Competent"

Handling Roommate Conflicts

Whether you have a roommate by choice, by necessity, or through the random selection process of your school's housing

---

office, it's important to be able to get along with the person who shares your living space. While having a roommate offers many benefits such as making a new friend, having someone to experience a new situation like college life with, and having someone to split the cost on your own with, there are also challenges. Some common roommate conflicts involve neatness, noise, having guests, sharing possessions, value conflicts, money conflicts, and personality conflicts (Ball State University, 2001). Read the following scenarios and answer the following questions for each one:

1. Which conflict management style, from the five discussed, would you use in this situation?
2. What are the potential strengths of using this style?
3. What are the potential weaknesses of using this style?

Scenario 1: Neatness. Your college dorm has bunk beds, and your roommate takes a lot of time making his bed (the bottom bunk) each morning. He has told you that he doesn't want anyone sitting on or sleeping in his bed when he is not in the room. While he is away for the weekend, your friend comes to visit and sits on the bottom bunk bed. You tell him what your roommate said, and you try to fix the bed back before he returns to the dorm. When he returns, he notices that his bed has been disturbed and he confronts you about it.

Scenario 2: Noise and having guests. Your roommate has a job waiting tables and gets home around midnight on Thursday nights. She often brings a couple friends from work home with her. They watch television, listen to music, or play video games and talk and laugh. You have an 8 a.m. class on Friday mornings and are usually asleep when she returns. Last Friday, you talked to her and asked her to keep it down in the future. Tonight, their noise has woken you up and you can't get back to sleep.

Scenario 3: Sharing possessions. When you go out to eat, you often bring back leftovers to have for lunch the next day during your short break between classes. You didn't have time to eat breakfast, and you're really excited about having your leftover pizza for lunch until you get home and see your roommate sitting on the couch eating the last slice.

Scenario 4: Money conflicts. Your roommate got mono and missed two weeks of work last month. Since he has a steady job and you have some savings, you cover his portion of the rent and agree that he will pay your portion next month. The next month comes around and he informs you that he only has enough to pay his half.

Scenario 5: Value and personality conflicts. You like to go out to clubs and parties and have friends over, but your roommate is much more of an introvert. You've tried to get her to come out with you or join the party at your place, but she'd rather study. One day she tells you that she wants to break the lease so she can move out early to live with one of her friends. You both signed the lease, so you have to agree or she can't do it. If you break the lease, you automatically lose your portion of the security deposit.

Culture and Conflict

Culture is an important context to consider when studying conflict, and recent research has called into question some of the assumptions of the five conflict management styles discussed so far, which were formulated with a Western bias (Oetzel, Garcia, & Ting-Toomey, 2008). For example, while the avoiding style of conflict has been cast as negative, with a low concern for self and other or as a lose/lose outcome, this research found that participants in the United States, Germany, China, and Japan all viewed avoiding strategies as demonstrating a concern for the other. While there are some generalizations we can make about culture and conflict, it is better to look at more specific patterns of how interpersonal communication and conflict management are related. We can better understand some of the cultural differences in conflict management by further examining the concept of *face*.

What does it mean to "save face?" This saying generally refers to preventing embarrassment or preserving our reputation or image, which is similar to the concept of face in interpersonal and intercultural communication. Our

face is the projected self we desire to put into the world, and **facework** refers to the communicative strategies we employ to project, maintain, or repair our face or maintain, repair, or challenge another's face. **Face negotiation theory** argues that people in all cultures negotiate face through communication encounters, and that cultural factors influence how we engage in facework, especially in conflict situations (Oetzel & Ting-Toomey, 2003). These cultural factors influence whether we are more concerned with self-face or other-face and what types of conflict management strategies we may use. One key cultural influence on face negotiation is the distinction between individualistic and collectivistic cultures.

The distinction between individualistic and collectivistic cultures is an important dimension across which all cultures vary. **Individualistic cultures** like the United States and most of Europe emphasize individual identity over group identity and encourage competition and self-reliance. **Collectivistic cultures** like Taiwan, Colombia, China, Japan, Vietnam, and Peru value in-group identity over individual identity and value conformity to social norms of the in-group (Dsilva & Whyte, 1998). However, within the larger cultures, individuals will vary in the degree to which they view themselves as part of a group or as a separate individual, which is called self-construal. Independent self-construal indicates a perception of the self as an individual with unique feelings, thoughts, and motivations. Interdependent self-construal indicates a perception of the self as interrelated with others (Oetzel & Ting-Toomey, 2003). Not surprisingly, people from individualistic cultures are more likely to have higher levels of independent self-construal, and people from collectivistic cultures are more likely to have higher levels of interdependent self-construal. Self-construal and individualistic or collectivistic cultural orientations affect how people engage in facework and the conflict management styles they employ.

Self-construal alone does not have a direct effect on conflict style, but it does affect face concerns, with independent self-construal favoring self-face concerns and interdependent self-construal favoring other-face concerns. There are specific facework strategies for different conflict management styles, and these strategies correspond to self-face concerns or other-face concerns.

- **Accommodating.** Giving in (self-face concern).
- **Avoiding.** Pretending conflict does not exist (other-face concern).
- **Competing.** Defending your position, persuading (self-face concern).
- **Collaborating.** Apologizing, having a private discussion, remaining calm (other-face concern) (Oetzel, Garcia, & Ting-Toomey, 2008).

Research done on college students in Germany, Japan, China, and the United States found that those with independent self-construal were more likely to engage in competing, and those with interdependent self-construal were more likely to engage in avoiding or collaborating (Oetzel & Ting-Toomey, 2003). And in general, this research found that members of collectivistic cultures were more likely to use the *avoiding* style of conflict management and less likely to use the *integrating* or *competing* styles of conflict management than were members of individualistic cultures. The following examples bring together facework strategies, cultural orientations, and conflict management style: Someone from an individualistic culture may be more likely to engage in competing as a conflict management strategy if they are directly confronted, which may be an attempt to defend their reputation (self-face concern). Someone in a collectivistic culture may be more likely to engage in avoiding or accommodating in order not to embarrass or anger the person confronting them (other-face concern) or out of concern that their reaction could reflect negatively on their family or cultural group (other-face concern). While these distinctions are useful for categorizing large-scale cultural patterns, it is important not to essentialize

or arbitrarily group countries together, because there are measurable differences within cultures. For example, expressing one's emotions was seen as demonstrating a low concern for other-face in Japan, but this was not so in China, which shows there is variety between similarly collectivistic cultures. Culture always adds layers of complexity to any communication phenomenon, but experiencing and learning from other cultures also enriches our lives and makes us more competent communicators.

Handling Conflict Better

Conflict is inevitable and it is not inherently negative. A key part of developing interpersonal communication competence involves being able to effectively manage the conflict you will encounter in all your relationships. One key part of handling conflict better is to notice patterns of conflict in specific relationships and to generally have an idea of what causes you to react negatively and what your reactions usually are.

Identifying Conflict Patterns

Much of the research on conflict patterns has been done on couples in romantic relationships, but the concepts and findings are applicable to other relationships. Four common triggers for conflict are criticism, demand, cumulative annoyance, and rejection (Christensen & Jacobson, 2000). We all know from experience that criticism, or comments that evaluate another person's personality, behavior, appearance, or life choices, may lead to conflict. Comments do not have to be meant as criticism to be perceived as such. If Gary comes home from college for the weekend and his mom says, "Looks like you put on a few pounds," she may view this as a statement of fact based on observation. Gary, however, may take the comment personally and respond negatively back to his mom, starting a conflict that will last for the rest of his visit. A simple but useful strategy to manage the trigger of criticism is to follow the old adage "Think before you speak." In many cases, there are alternative ways to phrase things that may be taken less personally, or we may determine that our comment doesn't need to be spoken at all. I've learned that a majority of the thoughts that we have about another person's physical appearance, whether positive or negative, do not need to be verbalized. Ask yourself, "What is my motivation for making this comment?" and "Do I have anything to lose by not making this comment?" If your underlying reasons for asking are valid, perhaps there is another way to phrase your observation. If Gary's mom is worried about his eating habits and health, she could wait until they're eating dinner and ask him how he likes the food choices at school and what he usually eats.

Demands also frequently trigger conflict, especially if the demand is viewed as unfair or irrelevant. It's important to note that demands rephrased as questions may still be or be perceived as demands. Tone of voice and context are important factors here. When you were younger, you may have asked a parent, teacher, or elder for something and heard back "Ask nicely." As with criticism, thinking before you speak and before you respond can help manage demands and minimize conflict episodes. As we discussed earlier, demands are sometimes met with withdrawal rather than a verbal response. If you are doing the demanding, remember a higher level of information exchange may make your demand clearer or more reasonable to the other person. If you are being demanded of, responding calmly and expressing your thoughts and feelings are likely more effective than withdrawing, which may escalate the conflict.

Cumulative annoyance is a building of frustration or anger that occurs over time, eventually resulting in a conflict interaction. For example, your friend shows up late to drive you to class three times in a row. You didn't say anything the previous times, but on the third time you say, "You're late again! If you can't get here on time, I'll find another way to get to class." Cumulative annoyance can build up like a pressure cooker, and as it builds up, the intensity of the conflict also builds. Criticism and demands can also play into cumulative annoyance. We have all probably let critical or demanding comments slide, but if they continue, it becomes difficult to hold back, and most of us have a breaking point. The problem here is that all the other incidents come back to your mind as you confront the other person, which usually intensifies the conflict. You've likely been surprised when someone has blown up at you due to cumulative annoyance or surprised when someone you have blown up at didn't know there was a problem building. A good strategy for managing cumulative annoyance is to monitor your level of annoyance and occasionally let some steam out of the pressure cooker by processing through your frustration with a third party or directly addressing what is bothering you with the source.

No one likes the feeling of rejection. Rejection can lead to conflict when one person's comments or behaviors are perceived as ignoring or invalidating the other person. Vulnerability is a component of any close relationship. When we care about someone, we verbally or nonverbally communicate. We may tell our best friend that we miss them, or plan a home-cooked meal for our partner who is working late. The vulnerability that underlies these actions comes from the possibility that our relational partner will not notice or appreciate them. When someone feels exposed or rejected, they often respond with anger to mask their hurt, which ignites a conflict. Managing feelings of rejection is difficult because it is so personal, but controlling the impulse to assume that your relational partner is rejecting you, and engaging in communication rather than reflexive reaction, can help put things in perspective. If your partner doesn't get excited about the meal you planned and cooked, it could be because he or she is physically or mentally tired after a long day. Concepts discussed in Chapter 2 "Communication and Perception" can be useful here, as perception checking, taking inventory of your attributions, and engaging in information exchange to help determine how each person is punctuating the conflict are useful ways of managing all four of the triggers discussed.

Interpersonal conflict may take the form of **serial arguing**, which is a repeated pattern of disagreement over an issue. Serial arguments do not necessarily indicate negative or troubled relationships, but any kind of patterned conflict is worth paying attention to. There are three patterns that occur with serial arguing: repeating, mutual hostility, and arguing with assurances (Johnson & Roloff, 2000). The first pattern is repeating, which means reminding the other person of your complaint (what you want them to start/stop doing). The pattern may continue if the other person repeats their response to your reminder. For example, if Marita reminds Kate that she doesn't appreciate her sarcastic tone, and Kate responds, "I'm soooo sorry, I forgot how perfect you are," then the reminder has failed to effect the desired change. A predictable pattern of complaint like this leads participants to view the conflict as irresolvable. The second pattern within serial arguments is mutual hostility, which occurs when the frustration of repeated conflict leads to negative emotions and increases the likelihood of verbal aggression. Again, a predictable pattern of hostility makes the conflict seem irresolvable and may lead to relationship deterioration. Whereas the first two patterns entail an increase in pressure on the participants in the conflict, the third pattern offers some relief. If people in an interpersonal conflict offer verbal assurances of their commitment to the relationship, then the problems associated with the other two patterns of serial arguing may be ameliorated. Even though the conflict may not be solved in the interaction, the verbal assurances of commitment imply that there is a willingness to work on solving the conflict in the future, which provides a sense of stability that can benefit the relationship. Although serial arguing is not inherently bad within a relationship, if

the pattern becomes more of a vicious cycle, it can lead to alienation, polarization, and an overall toxic climate, and the problem may seem so irresolvable that people feel trapped and terminate the relationship (Christensen & Jacobson, 2000). There are some negative, but common, conflict reactions we can monitor and try to avoid, which may also help prevent serial arguing.

Two common conflict pitfalls are one-upping and mindreading (Gottman, 1994). is a quick reaction to communication from another person that escalates the conflict. If Sam comes home late from work and Nicki says, "I wish you would call when you're going to be late" and Sam responds, "I wish you would get off my back," the reaction has escalated the conflict. **Mindreading** is communication in which one person attributes something to the other using generalizations. If Sam says, "You don't care whether I come home at all or not!" she is presuming to know Nicki's thoughts and feelings. Nicki is likely to respond defensively, perhaps saying, "You don't know how I'm feeling!" One-upping and mindreading are often reactions that are more reflexive than deliberate. Remember concepts like attribution and punctuation in these moments. Nicki may have received bad news and was eager to get support from Sam when she arrived home. Although Sam perceives Nicki's comment as criticism and justifies her comments as a reaction to Nicki's behavior, Nicki's comment could actually be a sign of their closeness, in that Nicki appreciates Sam's emotional support. Sam could have said, "I know, I'm sorry, I was on my cell phone for the past hour with a client who had a lot of problems to work out." Taking a moment to respond mindfully rather than react with a knee-jerk reflex can lead to information exchange, which could deescalate the conflict.

Mindreading leads to patterned conflict, because we wrongly presume to know what another person is thinking.

Validating the person with whom you are in conflict can be an effective way to deescalate conflict. While avoiding or retreating may seem like the best option in the moment, one of the key negative traits found in research on married couples' conflicts was withdrawal, which as we learned before may result in a demand-withdrawal pattern of conflict. Often validation can be as simple as demonstrating good listening skills discussed earlier in this book by making eye contact and giving verbal and nonverbal back-channel cues like saying "mmm-hmm" or nodding your head (Gottman, 1994). This doesn't mean that you have to give up your own side in a conflict or that you agree with what the other person is saying; rather, you are hearing the other person out, which validates them and may also give you some more information about the conflict that could minimize the likelihood of a reaction rather than a response.

As with all the aspects of communication competence we have discussed so far, you cannot expect that everyone you interact with will have the same knowledge of communication that you have after reading this book. But it often only takes one person with conflict management skills to make an interaction more effective. Remember that it's not the quantity of conflict that determines a relationship's success; it's how the conflict is managed, and one person's competent response can deescalate a conflict. Now we turn to a discussion of negotiation steps and skills as a more structured way to manage conflict.

Negotiation Steps and Skills

We negotiate daily. We may negotiate with a professor to make up a missed assignment or with our friends to plan activities for the weekend. Negotiation in interpersonal conflict refers to the process of attempting to change or influence conditions within a relationship. The negotiation skills discussed next can be adapted to all types of relational contexts, from romantic partners to coworkers. The stages of negotiating are prenegotiation, opening, exploration, bargaining, and settlement (Hargie, 2011).

In the prenegotiation stage, you want to prepare for the encounter. If possible, let the other person know you would like to talk to them, and preview the topic, so they will also have the opportunity to prepare. While it may seem awkward to "set a date" to talk about a conflict, if the other person feels like they were blindsided, their reaction could be negative. Make your preview simple and nonthreatening by saying something like "I've noticed that we've been arguing a lot about who does what chores around the house. Can we sit down and talk tomorrow when we both get home from class?" Obviously, it won't always be feasible to set a date if the conflict needs to be handled immediately because the consequences are immediate or if you or the other person has limited availability. In that case, you can still prepare, but make sure you allot time for the other person to digest and respond. During this stage you also want to figure out your goals for the interaction by reviewing your instrumental, relational, and self-presentation goals. Is getting something done, preserving the relationship, or presenting yourself in a certain way the most important? For example, you may highly rank the instrumental goal of having a clean house, or the relational goal of having pleasant interactions with your roommate, or the self-presentation goal of appearing nice and cooperative. Whether your roommate is your best friend from high school or a stranger the school matched you up with could determine the importance of your relational and self-presentation goals. At this point, your goal analysis may lead you away from negotiation—remember, as we discussed earlier, avoiding can be an appropriate and effective conflict management strategy. If you decide to

proceed with the negotiation, you will want to determine your ideal outcome and your bottom line, or the point at which you decide to break off negotiation. It's very important that you realize there is a range between your ideal and your bottom line and that remaining flexible is key to a successful negotiation—remember, through collaboration a new solution could be found that you didn't think of.

In the opening stage of the negotiation, you want to set the tone for the interaction because the other person will be likely to reciprocate. Generally, it is good to be cooperative and pleasant, which can help open the door for collaboration. You also want to establish common ground by bringing up overlapping interests and using "we" language. It would not be competent to open the negotiation with "You're such a slob! Didn't your mom ever teach you how to take care of yourself?" Instead, you may open the negotiation by making small talk about classes that day and then move into the issue at hand. You could set a good tone and establish common ground by saying, "We both put a lot of work into setting up and decorating our space, but now that classes have started, I've noticed that we're really busy and some chores are not getting done." With some planning and a simple opening like that, you can move into the next stage of negotiation.

There should be a high level of information exchange in the exploration stage. The overarching goal in this stage is to get a panoramic view of the conflict by sharing your perspective and listening to the other person. In this stage, you will likely learn how the other person is punctuating the conflict. Although you may have been mulling over the mess for a few days, your roommate may just now be aware of the conflict. She may also inform you that she usually cleans on Sundays but didn't get to last week because she unexpectedly had to visit her parents. The information that you gather here may clarify the situation enough to end the conflict and cease negotiation. If negotiation continues, the information will be key as you move into the bargaining stage.

The bargaining stage is where you make proposals and concessions. The proposal you make should be informed by what you learned in the exploration stage. Flexibility is important here, because you may have to revise your ideal outcome and bottom line based on new information. If your plan was to have a big cleaning day every Thursday, you may now want to propose to have the roommate clean on Sunday while you clean on Wednesday. You want to make sure your opening proposal is reasonable and not presented as an ultimatum. "I don't ever want to see a dish left in the sink" is different from "When dishes are left in the sink too long, they stink and get gross. Can we agree to not leave any dishes in the sink overnight?" Through the proposals you make, you could end up with a win/win situation. If there are areas of disagreement, however, you may have to make concessions or compromise, which can be a partial win or a partial loss. If you hate doing dishes but don't mind emptying the trash and recycling, you could propose to assign those chores based on preference. If you both hate doing dishes, you could propose to be responsible for washing your own dishes right after you use them. If you really hate dishes and have some extra money, you could propose to use disposable (and hopefully recyclable) dishes, cups, and utensils.

In the settlement stage, you want to decide on one of the proposals and then summarize the chosen proposal and any related concessions. It is possible that each party can have a different view of the agreed solution. If your roommate thinks you are cleaning the bathroom every other day and you plan to clean it on Wednesdays, then there could be future conflict. You could summarize and ask for confirmation by saying, "So, it looks like I'll be in charge of the trash and recycling, and you'll load and unload the dishwasher. Then I'll do a general cleaning on Wednesdays and you'll do the same on Sundays. Is that right?" Last, you'll need to follow up on the solution to make sure it's working for both parties. If your roommate goes home again next Sunday and doesn't get around to cleaning, you may need to go back to the exploration or bargaining stage.

Key Takeaways

- Interpersonal conflict is an inevitable part of relationships that, although not always negative, can take an emotional toll on relational partners unless they develop skills and strategies for managing conflict.

- Although there is no absolute right or wrong way to handle a conflict, there are five predominant styles of conflict management, which are competing, avoiding, accommodating, compromising, and collaborating.

- Perception plays an important role in conflict management because we are often biased in determining the cause of our own and others' behaviors in a conflict situation, which necessitates engaging in communication to gain information and perspective.

- Culture influences how we engage in conflict based on our cultural norms regarding individualism or collectivism and concern for self-face or other-face.

- We can handle conflict better by identifying patterns and triggers such as demands, cumulative annoyance, and rejection and by learning to respond mindfully rather than reflexively.

Exercises

1. Of the five conflict management strategies, is there one that you use more often than others? Why or why not? Do you think people are predisposed to one style over the others based on their personality or other characteristics? If so, what personality traits do you think would lead a person to each style?

2. Review the example of D'Shaun and Rosa. If you were in their situation, what do you think the best style to use would be and why?

3. Of the conflict triggers discussed (demands, cumulative annoyance, rejection, one-upping, and mindreading) which one do you find most often triggers a negative reaction from you? What strategies can you use to better manage the trigger and more effectively manage conflict?

1.3 Emotions and Interpersonal Communication

Learning Objectives

1. Define emotions.
2. Explain the evolutionary and cultural connections to emotions.
3. Discuss how we can more effectively manage our own and respond to others' emotions.

Have you ever been at a movie and let out a bellowing laugh and snort only to realize no one else is laughing? Have you ever gotten uncomfortable when someone cries in class or in a public place? Emotions are clearly personal, as they often project what we're feeling on the inside to those around us whether we want it to show or not. Emotions are also interpersonal in that another person's show of emotion usually triggers a reaction from us—perhaps support if the person is a close friend or awkwardness if the person is a stranger. Emotions are central to any interpersonal relationship, and it's important to know what causes and influences emotions so we can better understand our own emotions and better respond to others when they display emotions.

Emotions are physiological, behavioral, and/or communicative reactions to stimuli that are cognitively processed and experienced as emotional (Planlap, Fitness, & Fehr, 2006). This definition includes several important dimensions of emotions. First, emotions are often internally experienced through physiological changes such as increased heart rate, a tense stomach, or a cold chill. These physiological reactions may not be noticeable by others and are therefore intrapersonal unless we exhibit some change in behavior that clues others into our internal state or we verbally or nonverbally communicate our internal state. Sometimes our behavior is voluntary—we ignore someone, which may indicate we are angry with them—or involuntary—we fidget or avoid eye contact while talking because we are nervous. When we communicate our emotions, we call attention to ourselves and provide information to others that may inform how they should react. For example, when someone we care about displays behaviors associated with sadness, we are likely to know that we need to provide support (Planlap, Fitness, & Fehr, 2006). We learn, through socialization, how to read and display emotions, although some people are undoubtedly better at reading emotions than others. However, as with most aspects of communication, we can all learn to become more competent with increased knowledge and effort.

Primary emotions are innate emotions that are experienced for short periods of time and appear rapidly, usually as a reaction to an outside stimulus, and are experienced similarly across cultures. The primary emotions are joy, distress, anger, fear, surprise, and disgust. Members of a remote tribe in New Guinea, who had never been exposed to Westerners, were able to identify these basic emotions when shown photographs of US Americans making corresponding facial expressions (Evans, 2001).

Secondary emotions are not as innate as primary emotions, and they do not have a corresponding facial expression that makes them universally recognizable. Secondary emotions are processed by a different part of the brain that requires higher order thinking; therefore, they are not reflexive. Secondary emotions are love, guilt,

shame, embarrassment, pride, envy, and jealousy (Evans, 2001). These emotions develop over time, take longer to fade away, and are interpersonal because they are most often experienced in relation to real or imagined others. You can be fearful of a the dark but feel guilty about an unkind comment made to your mother or embarrassed at the thought of doing poorly on a presentation in front of an audience. Since these emotions require more processing, they are more easily influenced by thoughts and can be managed, which means we can become more competent communicators by becoming more aware of how we experience and express secondary emotions. Although there is more cultural variation in the meaning and expression of secondary emotions, they are still universal in that they are experienced by all cultures. It's hard to imagine what our lives would be like without emotions, and in fact many scientists believe we wouldn't be here without them.

Perspectives on Emotion

How did you learn to express your emotions? Like many aspects of communication and interaction, you likely never received any formal instruction on expressing emotions. Instead, we learn through observation, trial and error, and through occasional explicit guidance (e.g., "boys don't cry" or "smile when you meet someone"). To better understand how and why we express our emotions, we'll discuss the evolutionary function of emotions and how they are affected by social and cultural norms.

Evolution and Emotions

Human beings grouping together and creating interpersonal bonds was a key element in the continuation and success of our species, and the ability to express emotions played a role in this success (Planlap, Fitness, & Fehr, 2006). For example, unlike other species, most of us are able to control our anger, and we have the capacity for empathy. Emotional regulation can help manage conflict, and empathy allows us to share the emotional state of someone else, which increases an interpersonal bond. These capacities were important as early human society grew increasingly complex and people needed to deal with living with more people.

A dependable and nurturing caregiver helps establish a secure attachment style that will influence emotions and views of relationships in later life.

Attachment theory ties into the evolutionary perspective, because researchers claim that it is in our nature, as newborns, to create social bonds with our primary caretaker (Planlap, Fitness, & Fehr, 2006). This drive for attachment became innate through the process of evolution as early humans who were more successful at attachment were more likely to survive and reproduce—repeating the cycle. Attachment theory proposes that people develop one of the following three attachment styles as a result of interactions with early caretakers: secure, avoidant, or anxious attachment (Feeney, Noller, & Roverts, 2000). It is worth noting that much of the research on attachment theory has been based on some societal norms that are shifting. For example, although women for much of human history have played the primary caregiver role, men are increasingly taking on more caregiver responsibilities. Additionally, although the following examples presume that a newborn's primary caregivers are his or her parents, extended family, foster parents, or others may also play that role.

Individuals with a **secure attachment** style report that their relationship with their parents is warm and that their parents also have a positive and caring relationship with each other. People with this attachment style are generally comfortable with intimacy, feel like they can depend on others when needed, and have few self-doubts. As a result, they are generally more effective at managing their emotions, and they are less likely to experience intense negative emotions in response to a negative stimulus like breaking up with a romantic partner.

People with the **avoidant attachment** style report discomfort with closeness and a reluctance to depend on others. They quickly develop feelings of love for others, but those feelings lose intensity just as fast. As a result, people with this attachment style do not view love as long lasting or enduring and have a general fear of intimacy because of this. This attachment style might develop due to a lack of bonding with a primary caregiver.

People with the **anxious attachment** style report a desire for closeness but anxieties about being abandoned. They regularly experience self-doubts and may blame their lack of love on others' unwillingness to commit rather than their own anxiety about being left. They are emotionally volatile and more likely to experience intense negative emotions such as anxiety and anger. This attachment style might develop because primary caregivers were not dependable or were inconsistent—alternating between caring or nurturing and neglecting or harming.

This process of attachment leads us to experience some of our first intense emotions, such as love, trust, joy, anxiety, or anger, and we learn to associate those emotions with closely bonded relationships (Planlap, Fitness, & Fehr, 2006). For example, the child who develops a secure attachment style and associates feelings of love and trust with forming interpersonal bonds will likely experience similar emotions as an adult entering into a romantic partnership. Conversely, a child who develops an anxious attachment style and associates feelings of anxiety and mistrust with forming interpersonal bonds will likely experience similar emotions in romantic relationships later in life. In short, whether we form loving and secure bonds or unpredictable and insecure bonds influences our emotional tendencies throughout our lives, which inevitably affects our relationships. Of course, later in life, we have more control over and conscious thoughts about this process. Although it seems obvious that developing a secure attachment style is the ideal scenario, it is also inevitable that not every child will have the same opportunity to do so. But while we do not have control over the style we develop as babies, we can

exercise more control over our emotions and relationships as adults if we take the time to develop self-awareness and communication competence—both things this book will help you do if you put what you learn into practice.

Culture and Emotions

While our shared evolutionary past dictates some universal similarities in emotions, triggers for emotions and norms for displaying emotions vary widely. Certain emotional scripts that we follow are socially, culturally, and historically situated. Take the example of "falling in love." Westerners may be tempted to critique the practice of arranged marriages in other cultures and question a relationship that isn't based on falling in love. However, arranged marriages have been a part of Western history, and the emotional narrative of falling in love has only recently become a part of our culture. Even though we know that compatible values and shared social networks are more likely to predict the success of a long-term romantic relationship than "passion," Western norms privilege the emotional role of falling in love in our courtship narratives and practices (Crozier, 2006). While this example shows how emotions tie into larger social and cultural narratives, rules and norms for displaying emotions affect our day-to-day interactions.

Display rules are sociocultural norms that influence emotional expression. Display rules influence who can express emotions, which emotions can be expressed, and how intense the expressions can be. In individualistic cultures, where personal experience and self-determination are values built into cultural practices and communication, expressing emotions is viewed as a personal right. In fact, the outward expression of our inner states may be exaggerated, since getting attention from those around you is accepted and even expected in individualistic cultures like the United States (Safdar et al., 2009). In collectivistic cultures, emotions are viewed as more interactional and less individual, which ties them into social context rather than into an individual right to free expression. An expression of emotion reflects on the family and cultural group rather than only on the individual. Therefore, emotional displays are more controlled, because maintaining group harmony and relationships is a primary cultural value, which is very different from the more individualistic notion of having the right to get something off your chest.

There are also cultural norms regarding which types of emotions can be expressed. In individualistic cultures, especially in the United States, there is a cultural expectation that people will exhibit positive emotions. Recent research has documented the culture of cheerfulness in the United States (Kotchemidova, 2010). People seek out happy situations and communicate positive emotions even when they do not necessarily feel positive emotions. Being positive implicitly communicates that you have achieved your personal goals, have a comfortable life, and have a healthy inner self (Mesquita & Albert, 2007). In a culture of cheerfulness, failure to express positive emotions could lead others to view you as a failure or to recommend psychological help or therapy. The cultural predisposition to express positive emotions is not universal. The people who live on the Pacific islands of Ifaluk do not encourage the expression of happiness, because they believe it will lead people to neglect their duties (Mesquita & Albert, 2007). Similarly, collectivistic cultures may view expressions of positive emotion negatively because someone is bringing undue attention to himself or herself, which could upset group harmony and potentially elicit jealous reactions from others.

Emotional expressions of grief also vary among cultures and are often tied to religious or social expectations (Lobar, Youngblut, & Brooten, 2006). Thai and Filipino funeral services often include wailing, a more intense

and loud form of crying, which shows respect for the deceased. The intensity of the wailing varies based on the importance of the individual who died and the closeness of the relationship between the mourner and the deceased. Therefore, close relatives like spouses, children, or parents would be expected to wail louder than distant relatives or friends. In Filipino culture, wailers may even be hired by the family to symbolize the importance of the person who died. In some Latino cultures, influenced by the concept of machismo or manliness, men are not expected or allowed to cry. Even in the United States, there are gendered expectations regarding grieving behaviors that lead some men to withhold emotional displays such as crying even at funerals. On the other hand, as you can see in Video Clip 6.1, the 2011 death of North Korean leader Kim Jong-Il brought out public mourners who some suspected were told and/or paid to wail in front of television cameras.

Expressing Emotions

Emotion sharing involves communicating the circumstances, thoughts, and feelings surrounding an emotional event. Emotion sharing usually starts immediately following an emotional episode. The intensity of the emotional event corresponds with the frequency and length of the sharing, with high-intensity events being told more often and over a longer period of time. Research shows that people communicate with others after almost any emotional event, positive or negative, and that emotion sharing offers intrapersonal and interpersonal benefits, as individuals feel inner satisfaction and relief after sharing, and social bonds are strengthened through the interaction (Rime, 2007).

Our social bonds are enhanced through emotion sharing because the support we receive from our relational partners increases our sense of closeness and interdependence. We should also be aware that our expressions of emotion are infectious due to **emotional contagion**, or the spreading of emotion from one person to another (Hargie, 2011). Think about a time when someone around you got the giggles and you couldn't help but laugh along with them, even if you didn't know what was funny. While those experiences can be uplifting, the other side of emotional contagion can be unpleasant. One of my favorite skits from *Saturday Night Live,* called "Debbie Downer," clearly illustrates the positive and negative aspects of emotional contagion. In the skit, a group of friends and family have taken a trip to an amusement park. One of the people in the group, Debbie, interjects depressing comments into the happy dialogue of the rest of the group. Within the first two minutes of the skit, Debbie mentions mad cow disease after someone orders steak and eggs for breakfast, a Las Vegas entertainer being mauled by his tiger after someone gets excited about seeing Tigger, and a train explosion in North Korea after someone mentions going to the Epcot center. We've probably all worked with someone or had that family member who can't seem to say anything positive, and Debbie's friends react, as we would, by getting increasingly frustrated with her. The skit also illustrates the sometimes uncontrollable aspects of emotional contagion. As you know, the show is broadcast live and the characters occasionally "break character" after getting caught up in the comedy. After the comment about North Korea, Rachel Dratch, who plays Debbie, and Jimmy Fallon,

another actor in the scene, briefly break character and laugh a little bit. Their character slip leads other actors to break character and over the next few minutes the laughter spreads (which was not scripted and not supposed to happen) until all the actors in the skit are laughing, some of them uncontrollably, and the audience is also roaring with laughter. This multilayered example captures the positive, negative, and interpersonal aspects of emotional contagion.

In order to verbally express our emotions, it is important that we develop an emotional vocabulary. The more specific we can be when we are verbally communicating our emotions, the less ambiguous they will be for the person decoding our message. As we expand our emotional vocabulary, we are able to convey the intensity of the emotion we're feeling whether it is mild, moderate, or intense. For example, *happy* is mild, *delighted* is moderate, and *ecstatic* is intense, and *ignored* is mild, *rejected* is moderate, and *abandoned* is intense (Hargie, 2011). Aside from conveying the intensity of your emotions, you can also verbally frame your emotions in a way that allows you to have more control over them.

We can communicate ownership of our emotions through the use of "I" language. This may allow us to feel more in control, but it may also facilitate emotion sharing by not making our conversational partner feel at fault or defensive. For example, instead of saying "You're making me crazy!" you could say, "I'm starting to feel really anxious because we can't make a decision." However, there may be times when face-to-face communication isn't possible or desired, which can complicate how we express emotions.

In a time when so much of our communication is electronically mediated, it is likely that we will communicate emotions through the written word in an e-mail, text, or instant message. We may also still resort to pen and paper when sending someone a thank-you note, a birthday card, or a sympathy card. Communicating emotions through the written (or typed) word can have advantages such as time to compose your thoughts and convey the details of what you're feeling. There are also disadvantages, in that important context and nonverbal communication can't be included. Things like facial expressions and tone of voice offer much insight into emotions that may not be expressed verbally. There is also a lack of immediate feedback. Sometimes people respond immediately to a text or e-mail, but think about how frustrating it is when you text someone and they don't get back to you right away. If you're in need of emotional support or want validation of an emotional message you just sent, waiting for a response could end up negatively affecting your emotional state and your relationship.

"Getting Critical"

Politicians, Apologies, and Emotions

Politicians publicly apologizing for wrongdoings have been features in the news for years. In June of 2011, Representative Anthony Weiner, a member of the US Congress, apologized to his family, constituents, and friends for posting an explicit photo on Twitter that was intended to go to a woman with whom he had been chatting and then lying about it. He resigned from Congress a little over a week later. Emotions like guilt and shame are often the driving forces behind an apology, and research shows that apologies that communicate these emotions are viewed as more sincere (Hareli & Eisikovits, 2006). However, admitting and expressing guilt doesn't automatically lead to forgiveness, as such admissions may expose character flaws of an individual. Rep. Weiner communicated these emotions during his speech, which you can view in Video Clip 6.2. He said he was "deeply sorry," expressed "regret" for the pain he caused, and said, "I am deeply ashamed of my terrible judgment and actions" (CNN, 2001).

1. After viewing Rep. Weiner's apology, do you feel like he was sincere? Why or why not?

2. Do you think politicians have a higher ethical responsibility to apologize for wrongdoing than others? Why or why not?

Managing and Responding to Emotions

The notion of emotional intelligence emerged in the early 1990s and has received much attention in academic scholarship, business and education, and the popular press. **Emotional intelligence** "involves the ability to monitor one's own and others' feelings and emotions, to discriminate among them, and to use this information to guide one's thinking and action" (Salovey, Woolery, & Mayer, 2001). As was noted earlier, improving our emotional vocabulary and considering how and when to verbally express our emotions can help us better distinguish between and monitor our emotions. However, as the definition of emotional intelligence states, we must then use the results of that cognitive process to guide our thoughts and actions.

Just as we are likely to engage in emotion sharing following an emotional event, we are likely to be on the receiving end of that sharing. Another part of emotional intelligence is being able to appraise others' expressions of emotions and communicatively adapt. A key aspect in this process is empathy, which is the ability to comprehend the emotions of others and to elicit those feelings in ourselves. Being empathetic has important social and physical implications. By expressing empathy, we will be more likely to attract and maintain supportive social networks, which has positive physiological effects like lower stress and less anxiety and psychological effects such as overall life satisfaction and optimism (Guerrero & Andersen, 2000).

When people share emotions, they may expect a variety of results such as support, validation, or advice. If someone is venting, they may just want your attention. When people share positive emotions, they may want recognition or shared celebration. Remember too that you are likely to coexperience some of the emotion with the person sharing it and that the intensity of their share may dictate your verbal and nonverbal reaction (Rime, 2007). Research has shown that responses to low-intensity episodes are mostly verbal. For example, if someone describes a situation where they were frustrated with their car shopping experience, you may validate their emotion by saying, "Car shopping can be really annoying. What happened?" Conversely, more intense episodes involve nonverbal reactions such as touching, body contact (scooting close together), or embracing. These reactions may or may not accompany verbal communication. You may have been in a situation where someone shared an intense emotion, such as learning of the death of a close family member, and the only thing you could think to do was hug them. Although being on the receiving end of emotional sharing can be challenging, your efforts will likely result in positive gains in your interpersonal communication competence and increased relational bonds.

Key Takeaways

- Emotions result from outside stimuli or physiological changes that influence our behaviors and communication.
- Emotions developed in modern humans to help us manage complex social life including interpersonal relations.
- The expression of emotions is influenced by sociocultural norms and display rules.
- Emotion sharing includes verbal expression, which is made more effective with an enhanced emotional vocabulary, and nonverbal expression, which may or may not be voluntary.
- Emotional intelligence helps us manage our own emotions and effectively respond to the emotions of others.

Exercises

1. In what situations would you be more likely to communicate emotions through electronic means rather than in person? Why?
2. Can you think of a display rule for emotions that is not mentioned in the chapter? What is it and why do you think this norm developed?
3. When you are trying to determine someone's emotional state, what nonverbal communication do you look for and why?
4. Think of someone in your life who you believe has a high degree of emotional intelligence. What have they done that brought you to this conclusion?

1.4 Self-Disclosure and Interpersonal Communication

Learning Objectives

1. Define self-disclosure.
2. Explain the connection between social penetration theory, social comparison theory, and self-disclosure.
3. Discuss the process of self-disclosure, including how we make decisions about what, where, when, and how to disclose.
4. Explain how self-disclosure affects relationships.

Have you ever said too much on a first date? At a job interview? To a professor? Have you ever posted something on Facebook only to return later to remove it? When self-disclosure works out well, it can have positive effects for interpersonal relationships. Conversely, self-disclosure that does not work out well can lead to embarrassment, lower self-esteem, and relationship deterioration or even termination. As with all other types of communication, increasing your competence regarding self-disclosure can have many positive effects.

So what is self-disclosure? It could be argued that any verbal or nonverbal communication reveals something about the self. The clothes we wear, a laugh, or an order at the drive-through may offer glimpses into our personality or past, but they are not necessarily self-disclosure. **Self-disclosure** is purposeful disclosure of personal information to another person. If I purposefully wear the baseball cap of my favorite team to reveal my team loyalty to a new friend, then this clothing choice constitutes self-disclosure. Self-disclosure doesn't always have to be deep to be useful or meaningful. Superficial self-disclosure, often in the form of "small talk," is key in initiating relationships that then move onto more personal levels of self-disclosure. Telling a classmate your major or your hometown during the first week of school carries relatively little risk but can build into a friendship that lasts beyond the class.

Theories of Self-Disclosure

Social penetration theory states that as we get to know someone, we engage in a reciprocal process of self-disclosure that changes in breadth and depth and affects how a relationship develops. *Depth* refers to how personal or sensitive the information is, and *breadth* refers to the range of topics discussed (Greene, Derlega, & Mathews, 2006). You may recall Shrek's declaration that ogres are like onions in the movie *Shrek*. While certain circumstances can lead to a rapid increase in the depth and/or breadth of self-disclosure, the theory states that in most relationships people gradually penetrate through the layers of each other's personality like we peel the layers from an onion.

Social penetration theory compares the process of self-disclosure to peeling back the layers of an onion.

The theory also argues that people in a relationship balance needs that are sometimes in tension, which is a dialectic. Balancing a dialectic is like walking a tightrope. You have to lean to one side and eventually lean to another side to keep yourself balanced and prevent falling. The constant back and forth allows you to stay balanced, even though you may not always be even, or standing straight up. One of the key dialectics that must be negotiated is the tension between openness and closedness (Greene, Derlega, & Mathews, 2006). We want to make ourselves open to others, through self-disclosure, but we also want to maintain a sense of privacy.

We may also engage in self-disclosure for the purposes of social comparison. **Social comparison theory** states that we evaluate ourselves based on how we compare with others (Hargie, 2011). We may disclose information about our intellectual aptitude or athletic abilities to see how we relate to others. This type of comparison helps us decide whether we are superior or inferior to others in a particular area. Disclosures about abilities or talents can also lead to self-validation if the person to whom we disclose reacts positively. By disclosing information about our beliefs and values, we can determine if they are the same as or different from others. Last, we may disclose fantasies or thoughts to another to determine whether they are acceptable or unacceptable. We can engage in social comparison as the discloser or the receiver of disclosures, which may allow us to determine whether or not we are interested in pursuing a relationship with another person.

The final theory of self-disclosure that we will discuss is the Johari window, which is named after its creators Joseph Luft and Harrington Ingham (Luft, 1969). The **Johari window** can be applied to a variety of interpersonal interactions in order to help us understand what parts of ourselves are open, hidden, blind, and unknown. To help understand the concept, think of a window with four panes. As you can see in Figure 6.2 "Johari Window", one axis of the window represents things that are known to us, and the other axis represents things that are

known to others. The upper left pane contains open information that is known to us and to others. The amount of information that is openly known to others varies based on relational context. When you are with close friends, there is probably a lot of information already in the open pane, and when you are with close family, there is also probably a lot of information in the open pane. The information could differ, though, as your family might know much more about your past and your friends more about your present. Conversely, there isn't much information in the open pane when we meet someone for the first time, aside from what the other person can guess based on our nonverbal communication and appearance.

Figure 6.2 Johari Window

The bottom left pane contains hidden information that is known to us but not to others. As we are getting to know someone, we engage in self-disclosure and move information from the "hidden" to the "open" pane. By doing this, we decrease the size of our hidden area and increase the size of our open area, which increases our shared reality. The reactions that we get from people as we open up to them help us form our self-concepts and also help determine the trajectory of the relationship. If the person reacts favorably to our disclosures and reciprocates disclosure, then the cycle of disclosure continues and a deeper relationship may be forged.

The upper right pane contains information that is known to others but not to us. For example, we may be unaware of the fact that others see us as pushy or as a leader. Looking back to self-discrepancy theory from Chapter 2 "Communication and Perception", we can see that people who have a disconnect between how they see themselves and how others see them may have more information in their blind pane. Engaging in perception checking and soliciting feedback from others can help us learn more about our blind area.

The bottom right pane represents our unknown area, as it contains information not known to ourselves or others. To become more self-aware, we must solicit feedback from others to learn more about our blind pane, but we must also explore the unknown pane. To discover the unknown, we have to get out of our comfort zones and try new things. We have to pay attention to the things that excite or scare us and investigate them more to see if we can learn something new about ourselves. By being more aware of what is contained in each of these panes and

how we can learn more about each one, we can more competently engage in self-disclosure and use this process to enhance our interpersonal relationships.

"Getting Plugged In"

Self-Disclosure and Social Media

Facebook and Twitter are undoubtedly dominating the world of online social networking, and the willingness of many users to self-disclose personal information ranging from moods to religious affiliation, relationship status, and personal contact information has led to an increase in privacy concerns. Facebook and Twitter offer convenient opportunities to stay in touch with friends, family, and coworkers, but are people using them responsibly? Some argue that there are fundamental differences between today's digital natives, whose private and public selves are intertwined through these technologies, and older generations (Kornblum, 2007). Even though some colleges are offering seminars on managing privacy online, we still hear stories of self-disclosure gone wrong, such as the football player from the University of Texas who was kicked off the team for posting racist comments about the president or the student who was kicked out of his private, Christian college after a picture of him dressed in drag surfaced on Facebook. However, social media experts say these cases are rare and that most students are aware of who can see what they're posting and the potential consequences (Nealy, 2009). The issue of privacy management on Facebook is affecting parent-child relationships, too, and as the website "Oh Crap. My Parents Joined Facebook." shows, the results can sometimes be embarrassing for the college student and the parent as they balance the dialectic between openness and closedness once the child has moved away.

1. How do you manage your privacy and self-disclosures online?

2. Do you think it's ethical for school officials or potential employers to make admission or hiring decisions based on what they can learn about you online? Why or why not?

3. Are you or would you be friends with a parent on Facebook? Why or why not? If you already are friends with a parent, did you change your posting habits or privacy settings once they joined? Why or why not?

The Process of Self-Disclosure

There are many decisions that go into the process of self-disclosure. We have many types of information we can disclose, but we have to determine whether or not we will proceed with disclosure by considering the situation and the potential risks. Then we must decide when, where, and how to disclose. Since all these decisions will affect our relationships, we will examine each one in turn.

Four main categories for disclosure include observations, thoughts, feelings, and needs (Hargie, 2011). Observations include what we have done and experienced. For example, I could tell you that I live in a farmhouse in Illinois. If I told you that I think my move from the city to the country was a good decision, I would be sharing my thoughts, because I included a judgment about my experiences. Sharing feelings includes expressing an emotion—for example, "I'm happy to wake up every morning and look out at the corn fields. I feel lucky." Last, we may communicate needs or wants by saying something like "My best friend is looking for a job, and I really want him to move here, too." We usually begin disclosure with observations and thoughts and then move onto feelings and needs as the relationship progresses. There are some exceptions to this. For example, we are more likely to disclose deeply in crisis situations, and we may also disclose more than usual with a stranger if we do not think we'll meet the person again or do not share social networks. Although we don't often find ourselves

in crisis situations, you may recall scenes from movies or television shows where people who are trapped in an elevator or stranded after a plane crash reveal their deepest feelings and desires. I imagine that we have all been in a situation where we said more about ourselves to a stranger than we normally would. To better understand why, let's discuss some of the factors that influence our decision to disclose.

Generally speaking, some people are naturally more transparent and willing to self-disclose, while others are more opaque and hesitant to reveal personal information (Jourard, 1964). Interestingly, recent research suggests that the pervasiveness of reality television, much of which includes participants who are very willing to disclose personal information, has led to a general trend among reality television viewers to engage in self-disclosure through other mediated means such as blogging and video sharing (Stefanone & Lakaff, 2009). Whether it is online or face-to-face, there are other reasons for disclosing or not, including self-focused, other-focused, interpersonal, and situational reasons (Green, Derlega, & Mathews, 2006).

Self-focused reasons for disclosure include having a sense of relief or catharsis, clarifying or correcting information, or seeking support. Self-focused reasons for not disclosing include fear of rejection and loss of privacy. In other words, we may disclose to get something off our chest in hopes of finding relief, or we may not disclose out of fear that the other person may react negatively to our revelation. Other-focused reasons for disclosure include a sense of responsibility to inform or educate. Other-focused reasons for not disclosing include feeling like the other person will not protect the information. If someone mentions that their car wouldn't start this morning and you disclose that you are good at working on cars, you've disclosed to help out the other person. On the other side, you may hold back disclosure about your new relationship from your coworker because he or she's known to be loose-lipped with other people's information. Interpersonal reasons for disclosure involve desires to maintain a trusting and intimate relationship. Interpersonal reasons for not disclosing include fear of losing the relationship or deeming the information irrelevant to the particular relationship. Your decision to disclose an affair in order to be open with your partner and hopefully work through the aftermath together or withhold that information out of fear he or she will leave you is based on interpersonal reasons. Finally, situational reasons may be the other person being available, directly asking a question, or being directly involved in or affected by the information being disclosed. Situational reasons for not disclosing include the person being unavailable, a lack of time to fully discuss the information, or the lack of a suitable (i.e., quiet, private) place to talk. For example, finding yourself in a quiet environment where neither person is busy could lead to disclosure, while a house full of company may not.

Deciding when to disclose something in a conversation may not seem as important as deciding whether or not to disclose at all. But deciding to disclose and then doing it at an awkward time in a conversation could lead to negative results. As far as timing goes, you should consider whether to disclose the information early, in the middle, or late in a conversation (Greene, Derlega, & Mathews, 2006). If you get something off your chest early in a conversation, you may ensure that there's plenty of time to discuss the issue and that you don't end up losing your nerve. If you wait until the middle of the conversation, you have some time to feel out the other person's mood and set up the tone for your disclosure. For example, if you meet up with your roommate to tell her that you're planning on moving out and she starts by saying, "I've had the most terrible day!" the tone of the conversation has now shifted, and you may not end up making your disclosure. If you start by asking her how she's doing, and things seem to be going well, you may be more likely to follow through with the disclosure. You may choose to disclose late in a conversation if you're worried about the person's reaction. If you know they have an appointment or you have to go to class at a certain time, disclosing just before that time could limit your

immediate exposure to any negative reaction. However, if the person doesn't have a negative reaction, they could still become upset because they don't have time to discuss the disclosure with you.

Sometimes self-disclosure is unplanned. Someone may ask you a direct question or disclose personal information, which leads you to reciprocate disclosure. In these instances you may not manage your privacy well because you haven't had time to think through any potential risks. In the case of a direct question, you may feel comfortable answering, you may give an indirect or general answer, or you may feel enough pressure or uncertainty to give a dishonest answer. If someone unexpectedly discloses, you may feel the need to reciprocate by also disclosing something personal. If you're uncomfortable doing this, you can still provide support for the other person by listening and giving advice or feedback.

Once you've decided when and where to disclose information to another person, you need to figure out the best channel to use. Face-to-face disclosures may feel more genuine or intimate given the shared physical presence and ability to receive verbal and nonverbal communication. There is also an opportunity for immediate verbal and nonverbal feedback, such as asking follow-up questions or demonstrating support or encouragement through a hug. The immediacy of a face-to-face encounter also means you have to deal with the uncertainty of the reaction you'll get. If the person reacts negatively, you may feel uncomfortable, pressured to stay, or even fearful. If you choose a mediated channel such as an e-mail or a letter, text, note, or phone call, you may seem less genuine or personal, but you have more control over the situation in that you can take time to carefully choose your words, and you do not have to immediately face the reaction of the other person. This can be beneficial if you fear a negative or potentially violent reaction. Another disadvantage of choosing a mediated channel, however, is the loss of nonverbal communication that can add much context to a conversation. Although our discussion of the choices involved in self-disclosure so far have focused primarily on the discloser, self-disclosure is an interpersonal process that has much to do with the receiver of the disclosure.

Effects of Disclosure on the Relationship

The process of self-disclosure is circular. An individual self-discloses, the recipient of the disclosure reacts, and the original discloser processes the reaction. How the receiver interprets and responds to the disclosure are key elements of the process. Part of the response results from the receiver's attribution of the cause of the disclosure, which may include dispositional, situational, and interpersonal attributions (Jiang, Bazarova, & Hancock, 2011). Let's say your coworker discloses that she thinks the new boss got his promotion because of favoritism instead of merit. You may make a **dispositional attribution** that connects the cause of her disclosure to her personality by thinking, for example, that she is outgoing, inappropriate for the workplace, or fishing for information. If the personality trait to which you attribute the disclosure is positive, then your reaction to the disclosure is more likely to be positive. **Situational attributions** identify the cause of a disclosure with the context or surroundings in which it takes place. For example, you may attribute your coworker's disclosure to the fact that you agreed to go to lunch with her. **Interpersonal attributions** identify the relationship between sender and receiver as the cause of the disclosure. So if you attribute your coworker's comments to the fact that you are best friends at work, you think your unique relationship caused the disclosure. If the receiver's primary attribution is interpersonal, relational intimacy and closeness will likely be reinforced more than if the attribution is dispositional or situational, because the receiver feels like they were specially chosen to receive the information.

The receiver's role doesn't end with attribution and response. There may be added burdens if the information shared with you is a secret. As was noted earlier, there are clear risks involved in self-disclosure of intimate or potentially stigmatizing information if the receiver of the disclosure fails to keep that information secure. As the receiver of a secret, you may feel the need to unburden yourself from the co-ownership of the information by sharing it with someone else (Derlega, Petronio, & Margulis, 1993). This is not always a bad thing. You may strategically tell someone who is removed from the social network of the person who told you the secret to keep the information secure. Although unburdening yourself can be a relief, sometimes people tell secrets they were entrusted to keep for less productive reasons. A research study of office workers found that 77 percent of workers that received a disclosure and were told not to tell anyone else told at least two other people by the end of the day (Hargie, 2011)! They reported doing so to receive attention for having inside information or to demonstrate their power or connection. Needless to say, spreading someone's private disclosure without permission for personal gain does not demonstrate communication competence.

When the cycle of disclosure ends up going well for the discloser, there is likely to be a greater sense of relational intimacy and self-worth, and there are also positive psychological effects such as reduced stress and increased feelings of social support. Self-disclosure can also have effects on physical health. Spouses of suicide or accidental death victims who did not disclose information to their friends were more likely to have more health problems such as weight change and headaches and suffer from more intrusive thoughts about the death than those who did talk with friends (Greene, Derlega, & Mathews, 2006).

Key Takeaways

- Through the process of self-disclosure, we disclose personal information and learn about others.
- The social penetration theory argues that self-disclosure increases in breadth and depth as a relationship progresses, like peeling back the layers of an onion.
- We engage in social comparison through self-disclosure, which may determine whether or not we pursue a relationship.
- Getting integrated: The process of self-disclosure involves many decisions, including what, when, where, and how to disclose. All these decisions may vary by context, as we follow different patterns of self-disclosure in academic, professional, personal, and civic contexts.
- The receiver's reaction to and interpretation of self-disclosure are important factors in how the disclosure will affect the relationship.

Exercises

1. Answer the questions from the beginning of the section: Have you ever said too much on a first date? At a job interview? To a professor? Have you ever posted something on Facebook only to return later to remove it? If you answered yes to any of the questions, what have you learned in this chapter that may have led you to do something differently?
2. Have you experienced negative results due to self-disclosure (as sender or receiver)? If so, what could have been altered in the decisions of what, where, when, or how to disclose that may have improved the

situation?

3. Under what circumstances is it OK to share information that someone has disclosed to you? Under what circumstances is to not OK to share the information?
