About the journal

The International Scientific Periodical Journal "Modern Technology and Innovative Technologies" has been published since 2017 and has gained considerable recognition among domestic and foreign researchers and scholars.

Periodicity of publication: Quarterly

The journal activity is driven by the following objectives:

- Broadcasting young researchers and scholars outcomes to wide scientific audience
- Fostering knowledge exchange in scientific community
- Promotion of the unification in scientific approach
- Creation of basis for innovation and new scientific approaches as well as discoveries in unknown domains

The journal purposefully acquaints the reader with the original research of authors in various fields of science, the best examples of scientific journalism.

Publications of the journal are intended for a wide readership - all those who love science. The materials published in the journal reflect current problems and affect the interests of the entire public.

Each article in the journal includes general information in English. The journal is registered in INDEXCOPERNICUS.

Sections of the Journal:

Library of Congress Classification Outline	Sections
Subclass TJ / TJI-1570	Mechanical engineering and machinery
Subclass TK / TK1-9971	Electrical engineering.
Subclass TA / TA165	Engineering instruments, meters, etc. Industrial instrumentation
Subclass TK / TK5101-6720	Telecommunication
Subclass TK / TK1-9971	Electrical engineering. Electronics. Nuclear engineering
Subclass TN / TN1-997	Mining engineering. Metallurgy
Subclass TS / TS1950-1982, TS2120-2159	Animal products., Cereals and grain. Milling industry
Subclass TS / TS1300-1865	Textile industries
Subclass TK / TK7800-8360	Electronics
Subclass T / T55.4-60.8	Industrial engineering. Management engineering
Subclass T / T351-385	Mechanical drawing. Engineering graphics
Subclass TA / TA1001-1280, Subclass TL / TL1-484, Subclass TE / TE1-450, Subclass TF / TF1-1620	Transportation engineering, Motor vehicles. Cycles, Highway engineering. Roads and pavements, Railroad engineering and operation
Subclass TH / TH1-9745	Building construction
Subclass T / T55-55.3	Industrial safety. Industrial accident prevention
Additional sections	<i>Innovative economics and management, Innovations in pedagogy, psychology and sociology, Innovative approaches in jurisprudence, Innovative philosophical views</i>

Requirements for articles

Articles should correspond to the thematic profile of the journal, meet international standards of scientific publications and be formalized in accordance with established rules. They should also be a presentation of the results of the original author's scientific research, be inscribed in the context of domestic and foreign research on this topic, reflect the author's ability to freely navigate in the existing bibliographic context on the problems involved and adequately apply the generally accepted methodology of setting and solving scientific problems.

All texts should be written in literary language, edited and conform to the scientific style of speech. Incorrect selection and unreliability of the facts, quotations, statistical and sociological data, names of own, geographical names and other information cited by the authors can cause the rejection of the submitted material (including at the registration stage).

All tables and figures in the article should be numbered, have headings and links in the text. If the data is borrowed from another source, a bibliographic reference should be given to it in the form of a note.

The title of the article, the full names of authors, educational institutions (except the main text language) should be presented in English.

Articles should be accompanied by an annotation and key words in the language of the main text and must be in English. The abstract should be made in the form of a short text that reveals the purpose and objectives of the work, its structure and main findings. The abstract is an independent analytical text and should give an adequate idea of the research conducted without the need to refer to the article. Abstract in English (Abstract) should be written in a competent academic language.

The presence of UDC, BBK

Acceptance of the material for consideration is not a guarantee of its publication. Registered articles are reviewed by the editorial staff and, when formally and in substance, the requirements of the journal are sent to peer review, including through an open discussion using the web resource www.sworld.education

Only previously unpublished materials can be posted in the journal.

Regulations on the ethics of publication of scientific data and its violations

The editors of the journal are aware of the fact that in the academic community there are quite widespread cases of violation of the ethics of the publication of scientific research. As the most notable and egregious, one can single out plagiarism, the posting of previously published materials, the misappropriation of the results of foreign scientific research, and falsification of data. We oppose such practices.

The editors are convinced that violations of copyrights and moral norms are not only ethically unacceptable, but also serve as a barrier to the development of scientific knowledge. Therefore, we believe that the fight against these phenomena should become the goal and the result of joint efforts of our authors, editors, reviewers, readers and the entire academic community. We encourage all stakeholders to cooperate and participate in the exchange of information in order to combat the violation of the ethics of publication of scientific research.

For its part, the editors are ready to make every effort to identify and suppress such unacceptable practices. We promise to take appropriate measures, as well as pay close attention to any information provided to us, which will indicate unethical behavior of one or another author.

Detection of ethical violations entails refusal to publish. If it is revealed that the article contains outright slander, violates the law or copyright rules, the editorial board considers itself obliged to remove it from the web resource and from the citation bases. Such extreme measures can be applied only with maximum openness and publicity.

Abstract. The paper deals with the development of a computer monitoring system. Computer monitoring is increasingly used today to control the hygienic performance of water, air and soil. Not only does modern computer technology not only measure and store data, but also analyze, collate them against certain criteria. Creating any modern system requires the transfer of a certain amount of data, so the modern system can not be imagined without the network. The most common network to date is the global Internet. The Internet provides fast, remote access to the necessary data for users from all over the world, making it very flexible to use.

Key words: ecology, environmental monitoring, environmental monitoring software, web-technology of environmental monitoring, programming.

Introduction

Goal: Improvement of software and hardware for collecting and processing environmental monitoring data.

One of the components of the system of measures for improving the ecological status is information technologies, which allow to evaluate the situation effectively and objectively and to propose new methods aimed at assessing and forecasting the level of environmental pollution [1,2].

Every year, public institutions solve a number of problems related to the use and processing of environmental information. The Law of Ukraine “On the Concept of the National Informatization Program” sets out the tasks of creating information and software complexes in institutions of various levels, the use of which should have a significant impact on the organization of activities to stabilize the ecological state in the country.

In medicine, the number of new methods of environmental analysis based on the use of computer technologies has increased significantly.

With the help of modern information technologies, it has become possible not only to store and organize the obtained data, but also to process it using mathematical methods. A large number of industrial enterprises polluting the environment operate throughout Ukraine.

In this regard, there is a need for continuous environmental monitoring of the environment based on the introduction of modern information technologies. Environmental monitoring is a system for monitoring the state of the environment.

The environmental data processing application is designed to save environmental indicators collected for a specific region, edit them, and process them using mathematical statistics methods. Interaction with other environmental monitoring researchers in the world. This application allows users to create interest groups and share their observations in real time [3].

Methodologies

This application uses a client-server architecture. Logic application (Back) is

implemented using the Node.js framework, specially designed to create the logic of a client-server application. The visual (Front) part is written in HTML5 using CSS styles. The user interacting with the visual part sends requests to the server (Back). The server processes the information and displays the results to the client on the visual part.

The environmental monitoring application is written using web technologies, which ensures its availability around the world. The application does not need to be installed as well as software updates. The application, as well as data is stored on the server, which prevents their destruction or disappearance from the user's hard drive [4].

Using this application, you can significantly save time when analyzing and processing environmental data.

The application developed as part of scientific work can help researchers of the ecological state of the environment gain access:

- Construction of information technology assessment estimates of the labor market;
- Consciousness of software and technology concerns and the selection of environmental monitoring of the problem of the mid-range environment;
- Searches for information technology assessment of Wikipedia information on environmental monitoring of poor navigation tools.
- In the process of information technology assessment of the labor rate;
- Simplification of environmental processing information;
- Simplification of monitoring for environmental data;
- Obtained participants and prior environmental problems.

The following mathematical statistics formulas are implemented:

- calculation of the average value;
- sampling of the maximum value;
- sampling of the minimum value;
- amount for the selected data.

Data is stored as tables on the server. When creating a table, the user is prompted to fill out the fields of the table which will contain environmental monitoring data. Users will be able to fill out data on any environmental data (water, atmosphere, soil.)

Fields in the tables are divided into the following groups:

- tangible (smell, color, hardness, etc.);
- chemical elements;
- bacteria;
- radiation.

Before adding information to the service, you must register by entering the username and password. Next, the user will just have to go through authorization. When generating an account and saving customer data, the Advanced Encryption Standard (AES) algorithm was used. The product supports multisession up to 500 users online, in the future it is planned to increase this number.

Users can:

- create groups to which participants can join;

- add and remove members of your group;
- apply for group membership;
- delete groups;
- post data on the service;
- edit data on the service;
- delete data from the service;
- view data of other users if it is in the public domain;
- view your data.

Conclusions

An advanced model of software and hardware was developed to collect and provide environmental monitoring data.
