Welcome to the second volume of Recent Advances in Pathology and Laboratory Medicine! I hope RAPL becomes an essential part of your professional life, a resource that offers you a steady supply of high-quality, peer reviewed papers that are relevant and informative.

We are over whelmed with the number of papers we receive at the editorial desk and at the same time grateful to our readers for the feedback and hope that all the work including the articles chosen for this issue, demonstrates our desire to engage more broadly and highlight the advances in the field of medicine.

The journal includes review articles, original research works, case reports, letters to editor, interesting cases, perspective & opinions and hypothesis for pathologists and practitioners of laboratory medicine. The past issues have provided a wealth of new insights that have helped us to better understand the various entities in Pathology and Laboratory medicine along with the recent advances. It's the diversity of articles published that makes this journal interesting.

We at the Editorial board want to create a balanced and resourceful journal that appeals both to practicing pathologists applying their skills on a daily basis and researchers creating new theories. RAPL has a separate section 'Student's View' for undergraduate students also.

It will be a pleasure if you, the reader, consider becoming an author and submit your research works and discoveries with us at RAPL. There are no membership requirements to be an author. Our knowledgeable and experienced peer reviewers will thoroughly read your submission and provide you with constructive feedback. RAPL is an international platform for sharing the best ideas and research work. The journal aims to include original works that are practical applications of existing techniques as well as theoretical advances benefitting the residents and the under graduate students. It is the sole purpose of RAPL to respond to this need.
