Not Can I, But Should I: Analyzing the Pre-existing conditions surrounding successful third party intervention into intrastate conflicts

NAVAL POSTGRADUATE SCHOOL

Background, Question, Argument

- What pre-existing conditions in an intrastate conflict facilitate successful third-party intervention focused on spawning regime change?
- The United States has historically failed in the intervention of foreign intrastate conflicts.
- Our final intent is to identify general conditions that, if carefully exploited or cultivated, will lead to direct success for the United States when providing assistance to other countries.
- Our belief is that four conditions, Political, Economic, Social, and Informational, have a direct effect on the success of third party intervention

Pre-existing Conditions Score Table for Successful Intervention

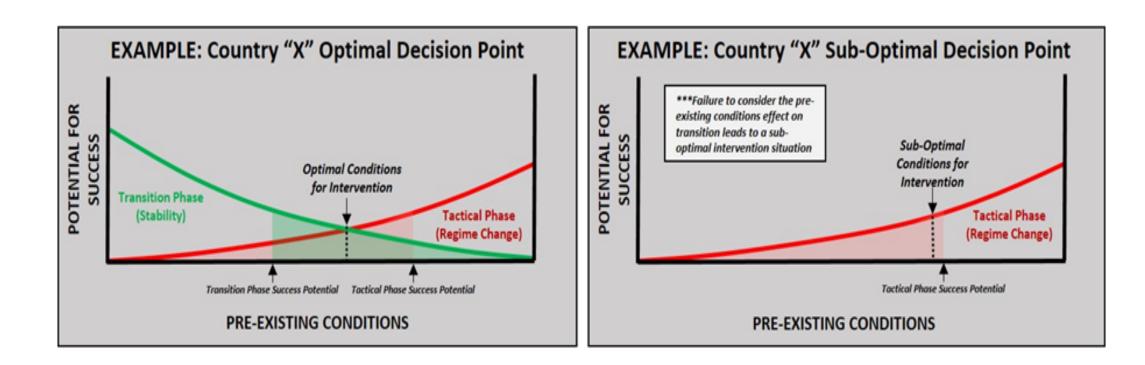

Research design

- Hypothesis: The level of political, economic, social, and informational conditions can directly lead to successful third party intervention
- We used empirical data and historical/current case studies to highlight the importance of the four main conditions
- Data sources used:

Results

- Intervention into intrastate conflicts is ill-advised if the conditions are not thoroughly understood
- Our Hypothesis was supported
- Our research suggests that the pre-existing conditions can be shaped to increase chances of

The graph on the left depicts a decision calculus that considers the effect of pre-existing conditions on achieving both successful regime change and establishing stability, thereby achieving overall success. The graph on the right is representative of a decision calculus that fails to consider the effects of preexisting conditions on establishing stability after a regime change, thereby negating overall success.

success however shaping must occur prior to intervention.

The "So What"

• These findings provide examples of the power of pre-existing conditions in influencing the success of foreign intervention.

Next Steps

Future research should further examine what conditions better support foreign intervention on the behalf of host nation government
