ABSTRACT

Purpose: To assess the changes of shape and alignment of the anterior and posterior surfaces of the mean cornea with age, as they can help to explain the optical quality of the aging eye. **Methods:** A group of 407 normal corneas of 211 subjects with ages ranging from 4 to 79 years old was analyzed by fitting their elevation topographies to a general biconic plus a Zernike expansion of the residual. **Results:** The anterior apex curvature increases with age, and becomes more prolate along the meridian of maximum curvature. The curvatures and conic constants of the posterior surface remain constant, which causes a peripheral thinning [2]. Zernike coefficients Z_4^0 & Z_6^0 show big changes in both surfaces. In addition the cornea rotates as a solid body by 2 minutes of arc per year, thus increasing its misalignment with the keratometric axis with age. **Conclusion:** The mean cornea shows highly significant changes with age, which might cause an important increase of corneal HOA.

METHODS

Setting: Antwerp University Hospital [5]

Instrument: Pentacam Scheimpflug camera (Oculus Optikgeräte, Wetzlar, Germany)

Subjects: 211 healthy subjects (62 male, 149 female; 204 Caucasian, 7 non-Caucasian)

Ages: Range 4-79 years old, mean 41.6 ± 14.5 years

Valid samples: 407 elevation topographies (anterior & posterior) + pachymetry

The surface model

Canonic form:

$$z = \frac{c_x x^2 + c_y y^2}{1 + \sqrt{1 - (1 + Q_x)c_x^2 x^2 - (1 + Q_y)c_y^2 y^2}} + \sum_k c_k Z_k + HOR$$

General form:

$$\mathbf{x}' = \mathbf{R}(\mathbf{x} - \mathbf{x}_0) \quad \text{with} \quad \mathbf{x} = \begin{pmatrix} x \\ y \\ z \end{pmatrix}$$

3D Rotation Euler angles: α, β, γ

Parameters

Biconic: $R_{max}, R_{min}, Q_{max}, Q_{min}$

Position/orientation: $\alpha, \beta, \gamma, x_0, y_0, z_0$

Zernike coefficients: $\{c_k\}$

Corneal thickness: $T_{min}, T_{peripheral} = \langle T \rangle_{ring(8-9 \text{ mm})}$

For anterior & posterior surface

SUMMARY & CONCLUSIONS

Changes with age

ANTERIOR			POSTERIOR		
Parameter	Equation	P < 0.05	Parameter	Equation	P < 0.05
R_{max} (mm)	7.859 -0.0051 *Age	yes	R_{max} (mm)	6.2441	No
R_{min} (mm)	7.721 -0.0046 *Age	yes	R_{min} (mm)	5.8721	No
Q_{max}	-0.367 -0.0009 *Age	yes	Q_{max}	-0.4899	No
Q_{min}	-0.294 -0.0023 *Age	yes	Q_{min}	-0.5348 -0.0026 *Age	yes
Z_4^0 (mm)	-0.026 +0.030 *Age	yes	Z_4^0 (mm)	6.022 -0.046 *Age	yes
Z_6^0 (mm)	0.171 -0.016 *Age	yes	Z_6^0 (mm)	-2.370 +0.013 *Age	yes
Tilt (α°)	-0.31 -0.024 *Age	yes	Tilt (α°)	-2.510 -0.0235 *Age	yes
Tip (β°)	0.71 +0.036 *Age	yes	Tip (β°)	2.230 +0.04 *Age	yes
Astig. Axis (γ°)	102.3 -0.356 *Age	yes	Astig. Axis (γ°)	99.530	No

	Equation	P < 0.05
Minimum Thickness (mm)	545.9	No
Peripheral Thickness (mm)	753.1 -0.5976 *Age	yes

1.- Previous findings confirmed:

- ✓ Both surfaces: prolate biconic (or ellipsoid) [Refs. 2,3]
- ✓ Corneal misalignment (tip & tilt) [Ref. 4]
- ✓ "Aspherical" Z_4^0 & Z_6^0 coef. are significant [Ref. 4]
- ✓ Anterior surface: More prolate & curved with age [Ref. 2]
- ⇒ Peripheral thinning [Ref. 2]
- ✓ Balance external/internal changes with age [Ref. 1]

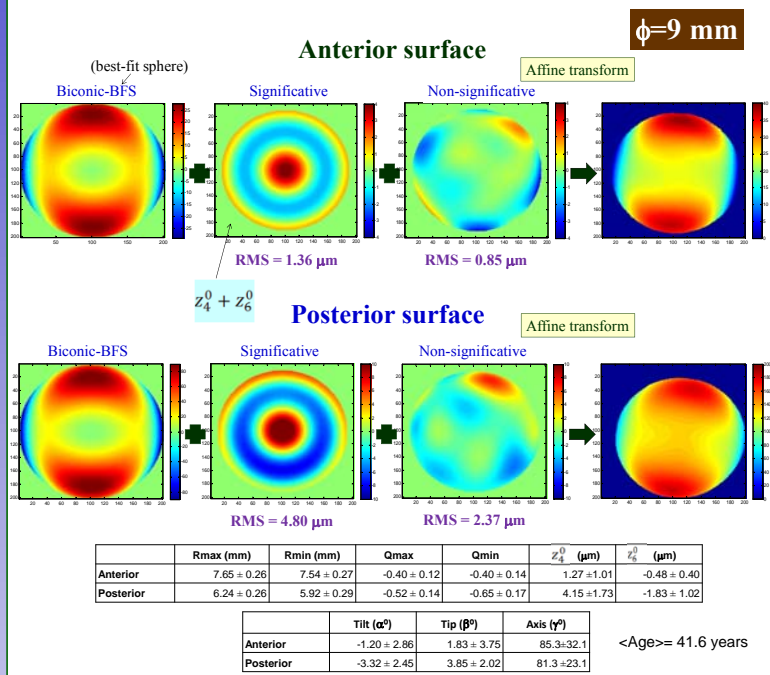

2.- New findings:

- ❖ Q_{min} changes but Q_{max} remains constant with age
- ❖ Corneal tip & tilt increase with age
- ❖ Anterior/posterior misalignment is constant ⇒ **Solid body rotation**
- ❖ Z_4^0 changes dramatically in both surfaces
- ❖ Changes in tip, tilt, Z_4^0 & Z_6^0 suggest strong impact on optical quality (sph. aberration & coma.)
