SUMMARY

Field studies to evaluate herbicides in rice weed management systems were conducted in 2005 at the Rice Research and Extension Center near Stuttgart, Arkansas. New herbicides, herbicide mixtures, and application timings were evaluated for weed control efficacy and rice tolerance. Results of these studies, in part, provide useful information to producers, fellow researchers, and the crop protection industry for the most effective, economical herbicide programs for successful rice production in Arkansas.

INTRODUCTION

“Field Evaluation of Herbicides on Rice, 2005” contains results from annual herbicide evaluation experiments on rice. The experiments reflect current concerns of Arkansas rice producers and the crop protection industry and are conducted under conditions common to Arkansas rice production practices.

Each experiment is prefaced by a site description form, which describes the methods and specific conditions of the experiment. Each site description is followed by the data table. Temperatures and rainfall data are located in the Appendix table.

This publication can be found online at: <http://www.uark.edu/depts/agripub/Publications/researchseries/>

ACKNOWLEDGMENTS

These studies were funded in part by check-off funds from the Arkansas Rice Research and Promotion Board, Dow AgroSciences, Isagro Ricerco, and RiceCo. The following companies supplied herbicides and adjuvants used in the studies: BASF, Bayer, Dow AgroSciences, DuPont, FMC, Gowan, Helena, Isagro, Monsanto, Riceco, and Valent. The authors appreciate the assistance of the following individuals: Howard Black, Jamie Branson, Tony Richards, and the farm crew at Stuttgart; Drs. Bob Scott (contributor) and Ken Smith, Arkansas State Weed Specialists; Dr. Rick Norman, U of A Professor, Fayetteville; and Dr. Dave Gealy (contributor), USDA Research Scientist, Dale Bumpers National Rice Research Center, Stuttgart.

List of Herbicides Used in Trials

By Common Name:

Common name	Trade name	Formulation	Manufacturer
2,4-D	several	several	several
acifluorfen	Ultra Blazer	2 SL	BASF
bensulfuron	Londax	60 DF	DuPont
bentazon	Basagran	4 SL	BASF
bentazon + acifluorfen	Storm	4 SL	BASF
bispyribac	Regiment	80 DF	Valent
carfentrazone	Aim	2 EC	FMC
clomazone	Command	3 ME	FMC
cyhalofop	Clincher	2.38 EC	Dow AgroSciences
fenoxyprop	Ricestar	0.58 EC	Bayer
glyphosate	Roundup UltraMax	3.7 (ae) SL	Monsanto
halosulfuron	Permit	75 DG	Gowan
imazethapyr	Newpath	2 AS	BASF
IR 5878	--	50 WG	Isagro
pendimethalin	Pendimax; Prowl	3.3 EC	Dow AgroSciences; BASF
penoxsulam	Grasp	2 EC	Dow AgroSciences
propanil	Stam; Super Wham; RiceShot	4 EC, 4 SC, 80 DF	Dow AgroSciences/RiceCo
propanil + bensulfuron	Duet	4.03 EC	RiceCo
quinclorac	Facet	75 DF	BASF
thiobencarb	Bolero	8 EC	Valent
triclopyr	Grandstand	3 SL	Dow AgroSciences

By Trade Name:

Trade name	Common name	Formulation	Manufacturer
--	IR 5878	50 WG	Isagro
2,4-D (several trade names)	2,4-D	several	several
Aim	carfentrazone	2 EC	FMC
Basagran	bentazon	4 SL	BASF
Bolero	thiobencarb	8 EC	Valent
Clincher	cyhalofop	2.38 EC	Dow AgroSciences
Command	clomazone	3 ME	FMC
Duet	propanil + bensulfuron	4.03 EC	RiceCo
Facet	quinclorac	75 DF	BASF
Grandstand	triclopyr	3 SL	Dow AgroSciences
Grasp	penoxsulam	2 EC	Dow AgroSciences
Londax	bensulfuron	60 DF	DuPont
Newpath	imazethapyr	2 AS	BASF
Pendimax	pendimethalin	3.3 EC	Dow AgroSciences
Permit	halosulfuron	75 DG	Gowan
Prowl	pendimethalin	3.3 EC	BASF
Regiment	bispyribac	80 DF	Valent
Rice Shot	propanil	4 EC	RiceCo
Ricestar	fenoxyprop	0.58 EC	Bayer
Roundup UltraMax	glyphosate	3.7 (ae) SL	Monsanto
Stam	propanil	4 SC, 80 DF	Dow AgroSciences
Storm	bentazon + acifluorfen	4 SL	BASF
Super Wham	propanil	4 EC	RiceCo
Ultra Blazer	acifluorfen	2 SL	BASF

List of Abbreviations Used in Tables

Abbreviations

BDLF or brdlf – broadleaf weeds
BROFOL – broadcast foliar application
BROSOI – broadcast soil application
BU/AC – bushels per acre
BYG – barnyardgrass
COC – crop oil concentrate
DA-A (or B, etc.) – days after application of timing A, B, etc.
DPP – days before planting (preplant)
DPRE – delayed preemergence
EPOST – early postemergence
IRR – irrigation
LF or If – leaf
LPOST – late postemergence
NIS – nonionic surfactant
NS – not significant according to LSD (least significant difference)
Pofld – postflood
PPI – preplant incorporated
PRE – preemergence
PREFLD – preflood

Bayer codes of weeds

AESVI – Northern jointvetch (*Aeschynomene virginica*)
AMAPA – Palmer amaranth (*Amaranthus palmeri*)
BRAPP – broadleaf signalgrass (*Brachiaria platyphylla*)
CASOB – sicklepod (*Senna obtusifolia*)
CYPES – yellow nutsedge (*Cyperus esculentus*)
ECHCG – barnyardgrass (*Echinochloa crus-galli*)
IPOLA – pitted morningglory (*Ipomoea lacunosa*)
PHYAN – cutleaf groundcherry (*Physalis angulata*)
POLLA – pale smartweed (*Polygonum lapathifolium*)
SEBEX – hemp sesbania (*Sesbania exaltata*)

University of Arkansas

Table 1. Evaluation of Herbicides for Non-Traditional Weeds in Rice, Lonoke

Trial ID: LONOKE 01-05
Location: Lonoke, Ark.

Study Dir.: Drew Ellis; Ron Talbert

Objective: Evaluate efficacy of several broadleaf rice herbicides on five non-traditional broadleaf weeds.

Conclusions: Several weeds that have not been a problem in rice have become a problem or are a potential problem, especially on levees or where flood is not constant, and are referred to as non-traditional rice weeds. Cutleaf groundcherry was controlled >90% 6 weeks after EPOST application of acifluorfen, carfentrazone, quinclorac, imazethapyr, triclopyr, propanil, and penoxsulam. Control with LPOST applications was >90% only with quinclorac, triclopyr, and propanil. Sicklepod and pitted morningglory were controlled >90% with EPOST applications of quinclorac and triclopyr and EPOST and LPOST applications of 2,4-D. Carfentrazone EPOST or LPOST also controlled pitted morningglory. Only acifluorfen and carfentrazone had significant activity on pale smartweed (average 85%) and then only for about 2 weeks after application. After 2 weeks, regrowth of pale smartweed was rapid. Palmer amaranth was also very difficult to control in this experiment. EPOST application of acifluorfen, carfentrazone, or triclopyr controlled Palmer amaranth at least 89%, but regrowth and continued emergence negated early control. 2,4-D was the only herbicide that controlled Palmer amaranth greater than 90% for over 2 weeks. Hemp sesbania was controlled by most herbicides including halosulfuron, acifluorfen, carfentrazone, quinclorac, bispyribac, propanil, and 2,4-D applied either EPOST or LPOST. Hemp sesbania control with triclopyr and IR5878 was fair.

In summary, each of these weeds can be controlled, with pale smartweed and Palmer amaranth being the most difficult to control. A herbicide program must be carefully chosen, both for herbicide and application timing, in fields where more than one of these non-traditional weeds are present.

CROP AND WEED DESCRIPTION

Weed	Code	Common Name	Scientific Name
1.	PHYAN	cutleaf groundcherry	<i>Physalis angulata</i>
2.	IPOLA	pitted morningglory	<i>Ipomoea lacunosa</i>
3.	CASOB	sicklepod	<i>Senna obtusifolia</i>
4.	AMAPA	Palmer amaranth	<i>Amaranthus palmeri</i>
5.	POLLA	pale smartweed	<i>Polygonum lapathifolium</i>

Crop 1: ORYSI RICE, PADDY (DRY-SEEDED+IRR) **Variety:** CI 161

Planting Date: 11/May/05 **Planting Method:** DRILLED

Rate: 70 LB/A **Depth:** 1.5 IN

Row Spacing: 7 in **Emergence Date:** 18/Aug/05

Soil Moisture: SLIGHTLY DRY

Plots were not flooded.

Table 2. Evaluation of Herbicides for Non-Traditional Weeds in Rice, Stuttgart, 2005

Trial ID: STUT 07-05
Location: Stuttgart, Ark.

Study Dir.: Drew Ellis; Ron Talbert
Affiliation: Univ. of Arkansas; Dept. Crop, Soil, and Environmental Sciences

Objective: Evaluate efficacy of several broadleaf rice herbicides on five non-traditional broadleaf weeds.

Conclusions: This experiment is a second location for evaluating herbicides on weeds that are becoming a problem in some rice fields, especially on levees and where flood is not constant (other location was at Lonoke; Table 1 in this series). Sicklepod was controlled >90% with quinclorac applied EPOST and LPOST and with EPOST application of 2,4-D, although 2,4-D activity was short-lived. Triclopyr was less effective in this experiment than at Lonoke, but propanil applied EPOST was more effective for the first 3 weeks after application (89 to 94%). As at Lonoke, carfentrazone had excellent activity on pitted morningglory, both EPOST and LPOST (>95% almost 3 weeks after application). Control with quinclorac and triclopyr EPOST and 2,4-D EPOST or LPOST was also >90%. Carfentrazone also controlled cutleaf groundcherry as did quinclorac, bispyribac, imazethapyr, and propanil EPOST and triclopyr and imazethapyr LPOST. Quinclorac was the only herbicide that could be used to control a complex of sicklepod, pitted morningglory, and cutleaf groundcherry.

CROP AND WEED DESCRIPTION

Weed	Code	Common Name	Scientific Name
1.	PHYAN	Cutleaf groundcherry	Physalis angulata
2.	IPOLA	Pitted morningglory	Ipomoea lacunosa
3.	CASOB	Sicklepod	Senna obtusifolia

Crop 1: ORYSI RICE, PADDY (DRY-SEEDED+IRR) **Variety:** CI 161
Planting Date: 28/Apr/05 **Planting Method:** DRILLED
Rate: 90 lbs/a **Emergence Date:** 7/May/05

Plots were not flooded.

SITE AND DESIGN

Plot Width, Unit: 6 FT **Plot Length, Unit:** 14 FT **Reps:** 4

University of Arkansas

Table 3. Programs with Clincher, Command, and Facet in Southern U.S. Rice

Trial ID: STUT 03-05
Location: Stuttgart, Ark.

Study Dir.: Drew Ellis; Ron Talbert
Affiliation: Univ. of Arkansas, Dept. Crop, Soil, and Environmental Sciences

Objective: To evaluate weed control with Clincher (cyhalofop), Command (clomazone), and Facet (quinclorac) herbicide programs.

Conclusions: Barnyardgrass and broadleaf signalgrass were controlled with clomazone at 0.225 lb/A PRE or cyhalofop at 0.25 lb/A + clomazone or quinclorac applied at the 3- to 4-leaf grass stage. Herbicide applications at preflood followed by the flood controlled all grass weeds by the end of June. Hemp sesbania and pitted morningglory were controlled with cyhalofop + quinclorac applied 2 weeks before the flood (3- to 4-leaf grass stage applications) and followed by triclopyr and halosulfuron applied 1 week before flood. Although pitted morningglory control was enhanced by the flood, cyhalofop applied post-flood (pofld) was needed to control hemp sesbania >90%. None of the herbicide programs controlled yellow nutsedge early in the season. Preflood treatments of triclopyr + halosulfuron helped with nutsedge control, and by 2 weeks after flood, nutsedge control ranged from 87 to 93% in all herbicide-treated plots. Rice yields did not differ among herbicide programs.

CROP AND WEED DESCRIPTION

Weed	Code	Common Name	Scientific Name
1.	ECHCG	Barnyardgrass	Echinochloa crus-galli
2.	BRAPP	Signalgrass, broadleaf	Bracharia platyphylla
3.	AESVI	Northern jointvetch	Aeschynomene virginica
4.	SEBEX	Hemp sesbania	Sesbania exaltata
5.	IPOLA	Morningglory, pitted	Ipomoea lacunosa
6.	CYPES	Yellow nutsedge	Cyperus esculentus

Crop 1: ORYSI RICE, PADDY (DRY-SEEDED+IRR) **Variety:** Wells
Planting Date: 27/Apr/05 **Planting Method:** DRILLED **Plots flushed weekly from planting to flood**
Rate: 90 lbs/A **Seed Bed:** SMOOTH **Permanent flood June 13**
Row Spacing: 7 in

SITE AND DESIGN

Plot Width: 6 FT **Plot Length:** 18 FT **Reps:** 4
Tillage Type: CONVENTIONAL-TILL **Study Design:** Randomized complete block

Table 4. Comparison of propanil formulations (Stam SC and Stam M-4)

Trial ID: Stut 06-05
Location: Stuttgart, Ark.

Study Dir.: Drew Ellis; Ron Talbert

Objective: To compare Stam M-4 and Stam 4SC for weed control in rice.

Conclusions: In general, activity of Stam SC and Stam M-4 was equal. By 22 days after application, control of broadleaf signalgrass and hemp sesbania was at least 90% with all treatments. Barnyardgrass was controlled only with Command or Facet plus Stam.

CROP AND WEED DESCRIPTION

Weed	Code	Common Name	Scientific Name
1.	ECHCG	Barnyardgrass	Echinochloa crus-galli
2.	BRAPP	Broadleaf signalgrass	Brachiaria platyphylla
3.	SEBEX	Hemp sesbania	Sesbania exaltata

Crop 1: ORYSI RICE, PADDY (DRY-SEEDED+IRR) **Variety:** Wells

Planting Date: 27/Apr/05

Planting Method: DRILLED

Rate: 90 lbs/A

Row Spacing: 7 in

Plots flushed weekly from planting to flood

Permanent flood: June 13

SITE AND DESIGN

Plot Width: 6 FT **Plot Length:** 18 FT **Reps:** 4 **Study Design:** Randomized complete block

SOIL DESCRIPTION

% Sand: 8	OM: 0.94	Texture: SILT LOAM
% Silt: 75	pH: 5.8	Soil Name: DEWITT
% Clay: 16	CEC: 14.3	Fert. Level: ADEQUATE

APPLICATION DESCRIPTION

Application Date:	23/May/05
Time of Day:	9:30pm
Application Method:	spray
Application Timing:	3-4LF BYG
Appl. Placement:	BROSOI
Air Temp., Unit:	79

Table 5. Penoxsulam (Grasp) in Rice Weed Management Programs

Trial ID: Stut 04-05
Location: Stuttgart, Ark.

Study Dir.: Drew Ellis; Ron Talbert

Objective: To evaluate efficacy of penoxsulam (Grasp) for weed control in conventional and Clearfield rice herbicide programs.

Conclusions: Barnyardgrass and broadleaf signalgrass were controlled with clomazone applied PRE or in a tank mixture with penoxsulam (Grasp). Penoxsulam did not increase control of the grasses in the Clearfield (Newpath) system. However, penoxsulam controlled hemp sesbania in the Clearfield system, especially when applied preflood (3- to 4-leaf rice). Penoxsulam may have had minimal activity on pitted morningglory, but good (>90%) control was obtained until flood was established when quinclorac or triclopyr were used in the management system. Penoxsulam had little activity on yellow nutsedge, but controlled Northern jointvetch in the Clearfield system. Penoxsulam applied with clomazone or propanil at the 2-leaf rice stage, even if followed by triclopyr plus halosulfuron preflood, had lower yield than other treatments.

CROP AND WEED DESCRIPTION

Weed	Code	Common Name	Scientific Name
1.	ECHCG	Barnyardgrass	Echinochloa crus-galli
2.	BRAPP	Signalgrass, broadleaf	Bracharia platyphylla
3.	AESVI	Northern jointvetch	Aeschynomene virginica
4.	SEBEX	Hemp sesbania	Sesbania exaltata
5.	IPOLA	Morningglory, pitted	Ipomoea lacunosa
6.	CYPES	Yellow nutsedge	Cyperus esculentus

Crop 1: ORYSI RICE, PADDY (DRY-SEEDED+IRR) **Variety:** CL 161

Planting Date: 27/Apr/05

Planting Method: DRILLED

Plots flushed weekly from planting to flood

Rate: 90 lbs/A

Row Spacing: 7 in

Permanent flood: June 13

SITE AND DESIGN

Plot Width: 6 FT

Plot Length: 18 FT

Reps: 4

Tillage Type: Conventional tillage

Study Design: Randomized complete block

Table 6. Rice Root Tolerance to Penoxsulam (Grasp) in Arkansas

Trial ID: STUT 05-05
Location: Stuttgart, Ark.

Study Dir.: Drew Ellis; Ron Talbert

Objective: To evaluate the effect of penoxsulam (Grasp) and bispyribac (Regiment) on rice root development.

Conclusions: Both penoxsulam and bispyribac caused significant visual root-mass reduction from 12 to 19 days after application. Rate response to penoxsulam was not significant, although root injury was more severe with bispyribac at 0.044 lb/A than at 0.022 lb/A at 12 days after application. However, by 26 days after application, no root injury was evident with either of the herbicides, and rice yields did not differ among treatments.

Crop Description

Crop 1: ORYSI RICE, PADDY (DRY-SEEDED+IRR)

Planting Date: 27/Apr/05

Rate: 90 lbs/A

Variety: Wells

Planting Method: DRILLED

Row Spacing: 7 in

Plots flushed weekly from planting to flood

Permanent flood: June 13

SITE AND DESIGN

Plot Width: 6 FT **Plot Length:** 18 FT **Reps:** 4

Study Design: Randomized complete block

SOIL DESCRIPTION

Table 7. Propanil (Super Wham) plus Cyhalofop (Clincher) for Control of Resistant Barnyardgrass

Trial ID: STUT 08-05

Location: Stuttgart, Ark.

Study Dir.: Dr. Robert Scott, Extension Weed Specialist; Drew Ellis

Objectives:

To evaluate control of propanil-resistant barnyardgrass with propanil formulation Super Wham and cyhalofop (Clincher)

Conclusions: Poor barnyardgrass control resulted when applications of Super Wham plus Clincher were delayed until barnyardgrass was 8 to 10 inches tall rather than when sprayed at the 4- to 6-inch stage, regardless of Clincher or Super Wham rate. Clincher at 6, 8, or 10 oz product/A tended to be more effective than 4 oz/A. Even with Clincher applied at high rates to 4- to 6-inch barnyardgrass, control declined between 4 and 5 weeks after application.

Table 8. Propanil (Super Wham) plus Clomazone (Command) for Control of Resistant Barnyardgrass

Trial ID: STUT 09-05

Location: Stuttgart, Ark.

Study Dir.: Dr. Robert Scott, Extension Weed Specialist; Drew Ellis

Objectives:

To evaluate control of propanil-resistant barnyardgrass with Super Wham and Command.

Conclusions: Barnyardgrass control was generally better with Command plus the grass herbicides Ricestar (fenoxaprop) and Clincher (cyhalofop) than with Super Wham. Control with Super Wham was poor (average of 60% 10 days after application and 15% 28 days after application). Although the addition of Command increased barnyardgrass control over that with Super Wham alone, control remained inadequate, and rice yields were reduced compared to rice treated with Ricestar and Clincher.

CROP AND WEED DESCRIPTION

Crop: ORYSI Oryza sativa

Rice, seeded, dried paddy

Variety: Wells

Planting date: 27/Apr/05

Planting method: drilled

Rate: 90 lb/A

Plots flushed weekly from planting until flood

Row Spacing: 7 in.

Seedbed: smooth

Permanent flood: June 13

Weed Code

EGHCG

Common Name

Barnyardgrass

Scientific Name

Echinochloa crus-galli

Table 9. Efficacy of IR5878 in a clomazone (Command) Program in Rice

Trial ID: STUT 01-05
Location: Stuttgart, Ark.

Study Dir.: Drew Ellis; Ron Talbert

Objective: To evaluate efficacy of IR5878 applied alone and with other postemergence herbicides for weed control in a rice weed management program with Command.

Conclusions: Early post applications of clomazone + IR5878 controlled northern jointvetch (AESVI), hemp sesbania (SEBEX), and pitted morningglory (IPOLA) until after permanent flood. Preflood applications of IR5848 with or without propanil increased northern jointvetch control over control with clomazone applied PRE. Control of hemp sesbania and pitted morningglory tended to be somewhat better with IR5878 + propanil applied preflood than with IR5878 applied alone preflood. However, pitted morningglory control with propanil + bensulfuron (Duet) was not as good as control with propanil alone (Super Wham) when combined with IR5878. Reduced rates of both IR5878 (0.0131 lb/A) and propanil (0.74 lb/A) were ineffective for controlling the weeds in this experiment. Although penoxsulam had good activity on northern jointvetch, control of pitted morningglory and hemp sesbania was poor. Only treatments containing halosulfuron controlled yellow nutsedge. Only clomazone applied alone PRE and penoxsulam applied alone preflood reduced rice yields to the level of the untreated check plots.

CROP AND WEED DESCRIPTION

Weed	Code	Common Name	Scientific Name
1.	AESVI	Northern jointvetch	<i>Aeschynomene virginica</i>
2.	SEBEX	Hemp sesbania	<i>Sesbania exaltata</i>
3.	IPOLA	Morningglory, pitted	<i>Ipomoea lacunosa</i>
4.	CYPES	Yellow nutsedge	<i>Cyperus esculentus</i>

Table 10. Imazethapyr (Newpath) in Conventional and Stale Seedbed Systems

Trial ID: STUT 11-05
Location: Stuttgart, Ark.

Study Dir.: Ron Talbert, Drew Ellis, Brian Ottis

Objective: 1) Evaluate barnyardgrass control with Newpath for optimal control based upon barnyardgrass growth stage in silt loam
 2) Evaluate rice tolerance at each application timing
 3) Compare barnyardgrass control in a conventional and stale seedbed production system

Conclusions: By mid-June, barnyardgrass and broadleaf signalgrass were controlled 90 to 100% regardless of imazethapyr treatment or tillage practice (stale seedbed or conventional tillage). Rice yields did not differ among treatments.

CROP AND WEED DESCRIPTION

Weed	Code	Common Name	Scientific Name
ECHCG		barnyardgrass	Echinochloa crus-galli (L.) Beauv.
BRAPP		broadleaf signalgrass	Brachiaria platyphylla (Griseb.) Nash

Crop: ORYSI Rice, Paddy (Dry-seeded) **Variety:** CL161

Planting Date: 5/May/05

Planting Method: DRILLED

Rate: 90 LB/A

Depth: 1 IN

Row Spacing: 7 in

Seed Bed: SMOOTH/TRASHY

Plots flushed weekly from planting until flood

Permanent flood: June 13

SITE AND DESIGN

Plot Width: 6 FT **Plot Length:** 18 FT **Reps:** 4

Tillage Type: CONV./STALE SEEDBED

Study Design: randomized complete block

Table 11. Evaluation of Conventional Herbicide Programs in Two Tillage Systems

Trial ID: STUT 10-05
Location: Stuttgart, Ark.

Study Dir.: Talbert, Ellis, Ottis

Objective: To evaluate conventional herbicide programs in stale-seedbed and conventional tillage systems.

Conclusions: Control of barnyardgrass and broadleaf signalgrass was generally >95% with treatments containing Command (clomazone) or Facet (quinclorac) applied 14 days preplant (DPP) in stale seedbed or PRE in conventional tillage or with Command applied delayed PRE (DPRE) in either tillage system, and rice yields were not reduced. Facet was not effective DPRE unless it was combined with Prowl (pendimethalin). Rice yields with Facet applied DPRE alone were reduced. Control of barnyardgrass and broadleaf signalgrass, however, was excellent with Facet plus Prowl applied DPRE and with clomazone treatments followed by Stam (propanil) early POST (EPOST) until at least 1 week after permanent flood. Delaying herbicide treatment until EPOST generally resulted in poorer control than applying DPRE and PRE treatments and following with Stam EPOST.

CROP AND WEED DESCRIPTION

Weed	Code	Common Name	Scientific Name
1.	ECHCG	barnyardgrass	Echinochloa crus-galli
2.	BRAPP	broadleaf signalgrass	Bracharia platyphylla

Crop: ORYSI rice, paddy (dry-seeded+irr) **Variety:** Wells

Planting Date: 5/May/05 **Planting Method:** drilled

Rate: 90 LB/A

Depth: 0.75 in

Row Spacing: 7 IN

Plots flushed weekly until flood

Seed Bed: smooth/trashy

Soil Moisture: adequate

Permanent flood June 13

SITE AND DESIGN

Plot Width: 6 FT **Plot Length:** 18 FT **Reps:** 4

Tillage Type: CONV./STALE SEEDBED **Study Design:** randomized complete block

Table 12. Evaluation of Potential Allelopathic Properties of Several Rice Cultivars

Trial ID: STUT 02-05
Location: Stuttgart, Ark.

Study Dir.: Talbert, Gealy, Ellis, Black

Objective: To evaluate rice varietal differences in allelopathic ability on barnyardgrass.

Conclusions: The interaction of cultivars and herbicide treatment was not significant for barnyardgrass control or rice yield, so potential allelopathic effects of specific cultivars were not discerned. Cultivars, averaged over herbicide treatments, also had no differential effect on barnyardgrass control. Averaged over cultivars, barnyardgrass was controlled better and rice yield was higher with Command (clomazone) applied delayed PRE (DPRE) followed by a preflood application of Stam (propanil) + Permit (halosulfuron) than by Bolero (thiobencarb) applied DPRE. The highest rice yields among cultivars, averaged over herbicide treatment, were from XL8 at 14 or 30 seed/ft², Francis, and XP710 at 14 seed/ft².

CROP AND WEED DESCRIPTION

Weed Code	Common Name	Scientific Name
ECHCG	Barnyardgrass	Echinochloa crus-galli

Crop:	ORYSI	Rice, Paddy (Dry-seeded + irrigation)	Variety:	Various	
Planting Date:	29/Apr/05	Planting Method:	Drilled	Depth:	1.5 IN
Row Spacing:	7 In	Soil Moisture:	Slightly dry	Emergence Date:	9/May/05
					Flushed weekly from planting until flood June 13
