Education in Clinical Practice

 Seeing the light: Working together to develop competent, reflective practitioners

To share our experiences and observations of teaching nursing students and stimulate discussion about education-practice partnership.

Learning Outcomes

- To explore issues that student nurses raise whilst learning and developing proficiency
- To demonstrate the contribution and potential of education to facilitate proficiency in practice
- To seek delegates' experiences of partnership working

Story so far....

- Background new curriculum –documentation
 - -linking theory and practice
 - -role of the link lecturer

Student examples

- Apply general theories and principles inflexibly to practice.
- In developing proficiency they sometimes claim they have 'done' little or not learned anything new on placement.
- They unwittingly devalue essential nursing practice
- Sometimes they believe that supernumerary status equates with technical or medical aspects of healthcare rather than 'doing' nursing ie. the fundamental essence of nursing care.

Partners in practice

- Our role is to challenge students' assumptions, preconceived ideas and expectations.
- Engage them in reflection
- Explore alternatives
- Appreciate that action in practice is never context free.
- As they develop skills, experience and confidence they assimilate professional values
- Understand the 'whole' clinical experience (Benner 1984).

Reflection

- Transformed perspective on experience
- Reflection
- perceiving
 - -acting
 - -doing

Mezirow (1981)

Reflection and learning

- learning is active
- learning is not achieved solely by having an experience but as a result of the thought and consideration – reflection – about what the experience means or meant

Learning involves

- <u>acting</u> and <u>noticing</u> how we act through:
- personal experience
- reflecting on that experience
- transforming knowledge and meaning as a result of reflecting
- so we <u>use</u> what we have learned

Reflection and learning

Emphasis is on experience and appreciation of the dynamic nature of knowledge

-Positively affirming
