Running Head: EXPLORING TRANSPARENCY

## Exploring transparency: A new framework for *responsible* business management

### Abstract

**Purpose** –The aims of this manuscript are to critically review the relevant literature on transparency, provide a comprehensive definition of transparency, and present a new framework for facilitating the adoption of transparency as an ethical cornerstone and pragmatic strategy for organizational responsible business management.

**Design/Methodology/approach** – A systematic literature review—a methodology adopted from medical sciences to eliminate research bias—was conducted. In doing so, the definitions, antecedents, and consequences of transparency are accessed and synthesized.

**Findings** –Based upon this process transparency is defined as *the extent to which a stakeholder perceives an organization provides learning opportunities about itself*. A conceptual framework emerged from the data. It describes when transparency is especially important, what organizations can do to be more transparent, and the potential benefits of transparency.

**Practical implications** –The transparency framework can be used as a guide for organizations attempting to change their behavior, image, and performance by adopting transparency as a value in their organization. In addition, the framework can be used to create and adopt a universal (i.e., industry-wide or even societal-wide) code of conduct. Furthermore, this review, definition, and framework provide a template for academics to advance transparency theory, and empirically test the construct's application.

**Originality/value** – As a new research field, transparency has lacked a concise definition as well as a conceptual framework. This is the first comprehensive summary of transparency. In addition, this study contributes to the methodology of evaluating construct definitions to advance empirical research.

**Keywords** Transparency, systematic literature review, ethical decision making, communication, stakeholders, trust, responsible business management.

**Paper type** General review

## 1. Introduction

The call for greater organizational transparency has become a mantra chanted by the press, practitioners, and scholars as a promising potential cure to the frequent ethical lapses in business (das Neves and Vaccaro, 2013; Doorey, 2011; Frynas, 2010; Lazarus and McManus, 2006; Makary, 2012; McKay, 2008). The lack of openness with stakeholders has increased skepticism while decreasing trust and confidence that organizations operate within the constraints of social, ethical, and environmental standards (Hein, 2002). In addition, both external and internal stakeholders are becoming even more empowered by advancements in communication technology, thereby making everyone ‘always-on, always connected’ and creating transparency as a routine expectation (Bennis, Goleman, O’Toole, and Biederman, 2008; Tapscott and Ticoll, 2003). Consequently, more and more stakeholders, i.e., all actors who can be affected by or affect an organization’s activities, have become increasingly skeptical, “on guard,” and distrustful of firms (Darke and Ritchie, 2007). In an environment in which many stakeholders have become increasingly vigilant against organizations, it is imperative to understand and become more skillful in approaches for reducing skepticism (Darke and Ritchie, 2007). Improving transparency holds promise for being one such solution.

Transparency should serve as a foundational tool for addressing stakeholder distrust and improving responsible management practices of organizations. Ethical behaviors are commonly evaluated in terms of assessments of “right” or “just” standards of behavior between parties in a situation (Ferrell and Gresham, 1985). These ethical judgments are made based on what one believes is fair and acceptable in terms of cultural, familial, and individual standards (Reidenbach and Robin, 1990; Reidenbach, Robin, and Dawson, 1991). An ethical assessment is

1  
2  
3 person- and context-specific and dependent on one's cultural, professional, industry,  
4  
5 organizational, and personal characteristics (Hunt and Vitell, 2006).  
6  
7

8 An organization's selection and implementation of core values communicates multiple  
9  
10 messages to all stakeholders, including who the organization is, how to act within the  
11  
12 organization, and how to engage with organizations and people outside of the organization. If  
13  
14 values are successfully implemented and communicated, ethical direction is provided to all  
15  
16 operational facets of the firm (AMA, 2010; Robin and Reidenbach, 1987; WOMMA, 2010). It is  
17  
18 posited that an organization should be able to improve relations and outcomes for all of its  
19  
20 stakeholders if the organization embraces transparency as a core value and embeds it into its  
21  
22 culture, operating procedures, and style of communication.  
23  
24  
25  
26

27 Before examining the mechanisms, outcomes, and impacts of transparency as a core  
28  
29 responsible management practice embraced throughout the organization, transparency must be  
30  
31 defined. Despite transparency becoming something of a buzzword in business, the literature  
32  
33 shows that definitions of transparency vary widely, have very little consistency, and are typically  
34  
35 imprecise (Baker, 2008; Bird and Wang, 2011; Cornand and Heinemann, 2008; Eggert and  
36  
37 Helm, 2003; Hofstede, 2003; Hultman and Axelsson, 2007; Jahansoozi, 2006; Vaccaro, 2012;  
38  
39 Vaccaro and Sison, 2011; Warren, Burns, and Thacket, 2012). Imprecise definitions lead to poor  
40  
41 measurement, low construct validity, and incorrectly identifying relationships (MacKenzie,  
42  
43 2003). It is vital to understand exactly what "transparency" means if organizations are to adopt it  
44  
45 as a responsible management practice.  
46  
47  
48  
49

50 The numerous ethical lapses in business indicate many organizations operate with norms  
51  
52 that foster opacity rather than transparency. The integrity of organizations' communications with  
53  
54 stakeholders has been repeatedly blemished by various opaque strategies, to the point that there  
55  
56  
57  
58  
59  
60

1  
2  
3 are now terms for a variety of ways organizations miscommunicate, such as greenwashing,  
4  
5 bluewashing, and whitewashing (Laufer, 2003; Tellings, 2006). Even in closely-knit supplier-  
6  
7  
8 buyer relationships, a lack of transparency can lead to dysfunctional relationships that result in  
9  
10 moral dilemmas (Roloff and Abländer, 2010).

11  
12  
13 Transparency has been touted as the ideal solution for reducing corruption and  
14  
15 stakeholder distrust by bringing issues into the open that are usually left in the dark (Halter and  
16  
17 de Arruda, 2009; Misangyi, Weaver, and Elms, 2008). To date, organizations' efforts to increase  
18  
19 transparency have often simply been a reactionary strategy for managing organizational and  
20  
21 individual reputations during public scandals (Cutler, 2008; Holusha, 1989; Klara, 2010). As a  
22  
23 consequence, some firms have adopted ethical codes of conduct, which have significantly  
24  
25 improved business professionals' ethical decision making (McKinney, Emerson, and Neubert,  
26  
27 2010). A sound definition of "transparency" is imperative for gaining greater insight into a  
28  
29 myriad of transparency-related issues, along with helping enhance theory and practical  
30  
31 applications.  
32  
33  
34  
35

36  
37 Consequently, the aims of this manuscript are to critically review the relevant literature  
38  
39 on transparency, provide a comprehensive definition of transparency, and present a new  
40  
41 framework for facilitating the adoption of transparency as an ethical cornerstone and pragmatic  
42  
43 strategy for organizations. An inductive process was employed to identify transparency  
44  
45 frameworks, which provided a qualitative analysis that helped identify key relationships and  
46  
47 factors of transparency. This qualitative analysis generated the first comprehensive summary  
48  
49 (e.g., systematic literature review) of transparency. The research questions explored were: how is  
50  
51 transparency defined, what are the antecedents of transparency, and what are the consequences  
52  
53 of transparency? Next, a succinct definition of transparency was developed from evaluating the  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 quality of definitions and the main themes provided in the literature. Lastly, this process led to  
4  
5 the development of a conceptual framework for transparency.  
6  
7

## 8 **2. Transparency and trust**

9

10 Trust is an antecedent and consequence of transparency. Transparency is necessary to create a  
11 sense of trustworthiness and accountability. Trust implies that one is willing to assume the risk  
12 that goes along with taking action based on the reliance of another (Stanley, Meyer, and  
13 Topolnysky, 2005). Constituents can build trust in an organization based on perceived  
14 organizational transparency by the organization sharing information, creating learning  
15 opportunities, and communicating openly. Palanski *et al.* (2011) illustrate that one will be more  
16 willing to be transparent when there is trust that others will not abuse the power gained from  
17 increased knowledge. An organization must trust its constituents to share information.

56  
57  
58  
59  
60

Transparency implies that organizations will go the “extra mile” to ensure stakeholders are well-informed (by providing relevant, effortless learning opportunities), and research suggests that an organization’s extra effort is rewarded. Transparency has the potential to benefit an organization’s employees, customers and partners, as well as entire societies. Trust is the primary benefit accruing to transparent organizations. Trust is confidence in an exchange partner’s reliability and integrity (Ahearne, Jelinek, and Jones, 2007; Eisingerich and Bell, 2008; Urban, Amyx, and Lorenzon, 2009; Yim, Tse, and Chan, 2008). Trust is discussed as a benefit of transparency between leaders and followers (Vogelgesang and Lester, 2009), an organization and its customers (Beulens, *et al.*, 2005; Chua, Robertson, Parackal, and Deans, 2012; Jahansoozi, 2006), and government institutions and its constituents (Halachmi and Greiling, 2013).

Furthermore, transparency within and between individuals, teams, and companies systemically

1  
2  
3 affects overall levels of trust within a society at large (Blomgren and Sundén, 2008; Brown and  
4 Michael, 2002).  
5  
6

7  
8 Like transparency, trust can be understood by exploring its causes, nature, and effects. To  
9  
10 date, the most widely cited models of trust was developed by Mayer and Schoorman (1995) and  
11 extended by Schoorman, Mayer, and Davis (2007). Mayer and Schoorman (1995) focused on the  
12 interpersonal nature of trust; Schoorman, Mayer, and Davis (2007) acknowledged that they had  
13 originally intended to extend their theory to corporate trust, including stakeholder trust and  
14 corporation to corporation trust. They proposed a model in which perceptions of trustworthiness  
15 and propensity to trust contribute to a person's willingness to take risks, or willingness to be  
16 vulnerable, with the other party. The willingness to be vulnerable is predicated on the  
17 individual's basic cost/benefit analysis; if the perceived potential benefits of risk taking outweigh  
18 the perceived potential costs of being vulnerable, then the individual will be more willing to take  
19 a risk in that relationship.  
20  
21

25  
26  
27  
28  
29  
30  
31  
32  
33

34 According to Mayer and Schoorman (1995) and Schoorman, Mayer, and Davis (2007),  
35 an individual, or corporation, is perceived as trustworthy based on favorable evaluations along  
36 three dimensions: ability, benevolence, and integrity. Mayer and Schoorman write, "Ability is  
37 that group of skills, competencies, and characteristics that enable a party to have influence within  
38 some specific domain" (p. 717). Ability is analogous to competence and expertise. Benevolence  
39 is defined as "the extent to which a trustee is believed to want to do good to the trustor, aside  
40 from the egocentric profit motive" (p. 718). Benevolence is perceived as akin to altruism and  
41 loyalty. Integrity "involves the trustor's perception that the trustee adheres to a set of principles  
42 that the trustor finds acceptable" (p. 719). If an individual has a low propensity to trust and  
43 perceives another individual as lacking ability, benevolence, or integrity, then a trusting  
44  
45  
46  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 relationship is highly unlikely. They also propose that early in a relationship the most important  
4  
5 factor in establishing trust is to demonstrate integrity through transparency. Mayer and  
6  
7  
8 Schoorman (1995) and Schoorman, Mayer, and Davis (2007) conclude the trust is ultimately  
9  
10 defined by an individual's willingness to be vulnerable to another party, which involves taking  
11  
12 risks in the relationships.  
13  
14

15 It is proposed that transparency serves as an antecedent to stakeholder trust. In light of the  
16  
17 foregoing discussion, however, transparency alone is not sufficient. Willingness for an  
18  
19 organization to share information about itself is necessary but insufficient to trust development.  
20  
21 Imagine a new company attempting to sell a new service. The ability questions, the dimension of  
22  
23 trust, on any consumer's or investor's mind include: 'can this person or company deliver on the  
24  
25 services promised; do they have the expertise; do they have the scale necessary to succeed?' If  
26  
27 the answer to these questions is negative, then consumers as well as investors will be unwilling  
28  
29 to take a risk by buying from or investing in that company. Benevolence and integrity questions,  
30  
31 dimensions of trust, function the same way as when a stakeholder asks the following questions:  
32  
33 'is this person/company interested in my welfare or are they willing to sell me inferior products  
34  
35 at inflated rates in order to increase their profits?' For instance, if a company's mission statement  
36  
37 only mentions maximizing investor return, then a consumer may be uninterested in purchasing  
38  
39 from that company because they are concerned about that company's benevolence. If a buyer has  
40  
41 heard through contacts that a supplier is inconsistent in delivering product in a timely manner  
42  
43 then that buyer may call into question that supplier's integrity and, unless that buyer has a very  
44  
45 high propensity to trust, will be unlikely to risk signing a supply contract.  
46  
47  
48  
49  
50  
51

52  
53 It is proposed that transparency is most relevant along the three trust factors in the  
54  
55 following order: ability, benevolence, and integrity. Trust and distrust are viewed as mutually  
56  
57  
58  
59  
60

1  
2  
3 exclusive. Distrust is conceived as the absence of trust (Schoorman, Mayer, and Davis, 2007).  
4  
5 Evaluating the communication of a company as an investor, one is most likely to first consider  
6  
7 whether or not the company has the ability to deliver on its promised goods or services. If the  
8  
9 investor judges that the company does not have the ability, that the potential risk of financial loss  
10  
11 outweighs the potential return on investment, then the investor will place his or her trust and,  
12  
13 therefore, investment elsewhere. Simply stated, lack of trust in ability is a nonstarter for internal  
14  
15 and external constituents alike. In this instance the investor is said to distrust the organization's  
16  
17 ability to perform.  
18  
19  
20  
21

22           Distrust might also be based on perceptions of an organization's benevolence. If  
23  
24 employees perceive that the primary purpose of the management team is to exploit them, then  
25  
26 distrust will ensue. Employees may believe that the management team has the ability to treat  
27  
28 them fairly, but trust will likely break down if employees do not perceive managers as  
29  
30 benevolent. The same holds true for consumers as well. If consumers perceive a company as  
31  
32 having the ability to make a quality product based on previous performance, but that company  
33  
34 begins producing the same product with cheaper materials and markets the inferior product at the  
35  
36 same or greater purchase price, consumers may very well call into question that company's  
37  
38 benevolence and, as a result, distrust is more likely to develop. Such a violation of trust will  
39  
40 likely have long term negative impact on that company's financial performance.  
41  
42  
43  
44  
45

46           Trust might also be threatened by perceived value incongruence, or perceptions of  
47  
48 integrity. Again, according to Mayer and Schoorman (1995), an organization is perceived to have  
49  
50 integrity, an essential component of trustworthiness, when it is perceived by constituents to  
51  
52 adhere to an acceptable set of (ethical) principles. Notice that the company does not have to be  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 perceived as unethical for the constituent to perceive that company lacks integrity. The company  
4  
5 and constituent might have ethically or morally equivalent, yet incongruent principles.  
6  
7

8 For many organizational constituents an important ethical and moral commitment is to  
9  
10 the triple bottom line: people, planet, and profit. For many, social responsibility and ecological  
11  
12 sustainability, in addition to profitability, are core ethical principles by which an organization  
13  
14 will be evaluated as to whether or not they are engaging in responsible business management.  
15  
16 Failure to engage in responsible business practices will likely lead to constituent perceptions of  
17  
18 untrustworthiness. Furthermore, the perception that an organization fails to engage in responsible  
19  
20 business practices will have an equally deleterious effect. Thus, further bolstering the necessity  
21  
22 of transparency. We may be approaching a business climate in which an organization that fails to  
23  
24 explicitly address each of these three areas will be assumed to lack integrity and, therefore, will  
25  
26 be perceived as untrustworthy. We propose that transparency, especially regarding the triple  
27  
28 bottom line and responsible business management practices, is the cornerstone of employee  
29  
30 engagement, customer loyalty, organizational performance, and societal and ecological  
31  
32 sustainability.  
33  
34  
35  
36  
37

### 38 **3. Benefits of transparency**

39  
40 As a responsible business management practice transparency can positively benefit employees,  
41  
42 customers and partners, the organization, and society.  
43  
44

#### 45 *3.1 Employee benefits*

46  
47 Internally transparent organizations are open to sharing information within and across  
48  
49 departments and teams, and from both top down and bottom up. An open culture of internal  
50  
51 knowledge sharing results in employees being more engaged in their job role and higher  
52  
53 performance (Vogelgesang and Lester, 2009). Employee engagement is enhanced because  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 employees have a better understanding of how their role fits into the strategic direction of the  
4 organization, and they tend to trust management more (Vogelgesang and Lester, 2009). This trust  
5 due to transparency helps employees make better decisions in accordance with the strategic  
6 direction of the firm (Street and Meister, 2004). Transparency literature supports the Tenbrunsel  
7 and Smith-Crowe ethical decision making framework (2008), which contends that employees are  
8 aware of transparency issues and are both givers and receivers of transparency who are more  
9 responsible in their decision making (Halter, de Arruda, and Halter, 2009), less likely to act  
10 opportunistically (Bessire, 2005), and more cooperative during acquisitions and mergers (Piske,  
11 2002). Transparency experienced by internal stakeholders has a potentially profound impact of  
12 shifting organizations toward higher levels of transparency experienced by external stakeholders.  
13  
14

### 15 3.2 *Customers and partners benefits*

16 Externally transparent organizations are open to sharing information with stakeholders, such as  
17 their current and prospective customers, supply chain members, investors, and partners. An  
18 organization's brand, perceived transparent or not, "is derived from what institutions have done  
19 and not what they would ideally do (what has been termed the "promise/performance gap")"  
20 (Bernstein, 2009, p. 604). Organizations that are transparent with their external stakeholders  
21 benefit from customers who have more favorable attitudes toward the brand (Arens, Deimel, and  
22 Theuvsen, 2011), perceive the firm as more credible (Brown and Michael, 2002), perceive  
23 greater price fairness and procedural justice (Carter and Curry, 2010; Miao and Mattila, 2007),  
24 have greater customer satisfaction (Eggert and Helm, 2003), perceive greater value of the firm's  
25 products (Carter and Curry, 2010; Eggert and Helm, 2003), trust the organization more (Beulens,  
26 *et al.*, 2005; Jahansoozi, 2006), and ultimately have a greater purchase intention (Bhaduri and  
27 Ha-Brookshire, 2011). Transparency with supply chain members results in greater supply chain  
28  
29  
30  
31  
32  
33  
34  
35  
36  
37  
38

53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 efficiencies in flow of materials (Hultman and Axelsson, 2007), cooperation (Beulens, *et al.*,  
4 2005) and trust (Beulens, *et al.*, 2005). Employees, customers, and business partners trusting a  
5  
6 firm due to its transparency efforts may enable the firm to outperform its competitors.  
7  
8

### 9 10 3.3 Organizational benefits

11  
12 Organizations that are internally and externally transparent are said to have a greater competitive  
13 advantage (Halter and de Arruda, 2009; Vogelgesang and Lester, 2009). Transparency enhances  
14 organization-wide understanding of the competition (Halter and de Arruda, 2009), which allows  
15 organizations to improve differentiation of their product offerings to targeted consumers (Carter  
16 and Curry, 2010). This benefit is further facilitated by greater collaboration and cooperation with  
17 stakeholders (Jahansoozi, 2006). Transparent organizations are also generally more committed to  
18 stakeholders compared to nontransparent organizations, thereby leading to healthier stakeholder  
19 relationships (Jahansoozi, 2006) and overall better business practices (Halter and de Arruda,  
20 2009; Halter, *et al.*, 2009). Firms' transparency efforts drive less haphazard decision making  
21 (Granados and Gupta, 2013), and more ethically sound (Halter and de Arruda, 2009) and socially  
22 responsible (Awaysheh and Klassen, 2010) decision making. For example, firms that have a  
23 marketing transparency decision-making framework choose to manufacture safer products  
24 (Beulens, *et al.*, 2005). A marketing transparency decision-making framework creates an  
25 atmosphere where sharing detailed information is the norm (Bansal and Kistruck, 2006), and  
26 engaging in undetectable deceptive marketing actions is difficult to hide (Warren, *et al.*, 2012).  
27  
28 Ultimately, this transparency leads to a more favorable brand image (Halter, *et al.*, 2009) and  
29 greater marketing message persuasiveness (Miao and Mattila, 2007). Transparency between  
30 organizations and its customers is a technique to strengthen the relationships (Gupta, Grant, and  
31  
32  
33

1  
2  
3 Melewar, 2008). Most importantly, these benefits lead to increased sales and greater profit  
4  
5 margins (Carter and Curry, 2010).  
6  
7

### 8 *3.4 Societal benefits*

9

10 Today's stakeholders evaluate organizations by more than just its sales and profits. The "triple  
11  
12 bottom line" concept has become increasingly popular to help stakeholders compare and assess  
13  
14 organizations from a broader viewpoint incorporating economic, ecological, and social impacts.  
15  
16  
17 Transparency is said to be a key driver for many organizations that have adopted the triple  
18  
19 bottom line agenda into its communication strategies and reporting metrics (Elkington, 1998,  
20  
21 2004). Society as a whole benefits when organizations engage in transparent practices (e.g.  
22  
23 adopting the triple bottom line approach). When transparent organizations provide relevant and  
24  
25 easy learning opportunities to stakeholders it is easier to see untruths that previously would have  
26  
27 been remained hidden. Transparency leads to greater consumer education (Vaccaro and Sison,  
28  
29 2011) and thus a more equitable balance of power between the organization and its stakeholders  
30  
31 (Cheng, 2011). Transparent organizations are less able to exploit societal resources (Vaccaro and  
32  
33 Sison, 2011), skew reality in their favor and falsify outcomes (Halachmi and Greiling, 2013;  
34  
35 Hood, 2007), hide agendas and keep secrets (Jahansoozi, 2006), and engage in deceptive and  
36  
37 corrupt practices. Transparency implies that stakeholders have the ability to hold organizations  
38  
39 accountable (Halachmi and Greiling, 2013; Jahansoozi, 2006; Ross, Gross, and Krumholz, 2012;  
40  
41 Stasavage, 2004; Vaccaro and Sison, 2011) by verifying the organization's behaviors (Campbell,  
42  
43 2007; Halter and de Arruda, 2009). If transparency efforts enhance intra-organizational ethical  
44  
45 decision making and triple bottom line performance then organizations would be wise to adopt a  
46  
47 transparency framework.

### 3.5 What transparency is: Bringing together causes and outcomes

An organization's awareness of transparency plays a critical first step in acting as a framework for decision making. Organizations, however, may resist greater transparency for a variety of legitimate as well as illegitimate reasons including hiding unethical or illegal behavior, impression management, lack of awareness, lack of trust of internal or external stakeholders, fear of public reaction, maintain competitive advantage, and due process for internal affairs investigations, and the like. People in organizations likely resist greater transparency for the same or similar reasons any organizational change effort is resisted. For example, individuals may fear the disruption of interpersonal connections at work, loss of control, loss of routine, or the perception of a threat to job security, and, thus, be more likely to resist change in general and greater transparency in particular (Marci, Tagliaventi, and Bertolotti, 2002). However, there appears to be a gap in the literature as to the causes related to resistance specifically to greater transparency such that more research is warranted to determine whether or not the same mechanisms that lead individuals and organizations to resist change generally also lead individuals and organizations to resist transparency-related change specifically. Nevertheless, once transparency becomes salient and activated as a core organization value, it can and should be used as a dominant guideline or theme. To help fill the gap in literature and practice and develop a useful transparency framework for decision makers, the first step was systematically exploring transparency definitions, followed by examining the precursors and outcomes of transparency.

## 4. Methodology

In order to align with the central theme of transparency, and to help mitigate bias, a systematic literature review was conducted. The systematic literature review focused on exploring peer reviewed articles that examined transparency as the central theme of the paper and in organizational contexts. The approach of this review included extensive database searches with the intention of confirming, as much as possible, that all transparency literature was identified,

1  
2  
3 while maintaining the focus on literature of greatest relevance to the research questions (e.g.,  
4 conceptual or empirical studies that investigated transparency in organizational contexts). By  
5 utilizing this methodology adopted from the medical field, the literature searches are objective,  
6 replicable, and comprehensive (Parris and Welty Peachey, 2013; Weed, 2005). Articles were  
7 selected based on the predetermined inclusion and exclusion criteria described below, and then  
8 assessed and synthesized based on the specific research questions (Klassen, Jadad, and Moher,  
9 1998; Parris and Welty Peachey, 2013).  
10

18  
19

#### 20 4.1 Search methods

21  
22 Published studies were identified through a search of electronic databases accessible through the  
23 authors' institution. Databases included in this review were Academic Search Complete,  
24 Business Source Complete, Social Science Journals, Communication and Mass Media Complete,  
25 PsycINFO, ProQuest Research Library (Business), ERIC, and ABI/INFORM. The searches were  
26 conducted in a systemic manner, in the order listed above.  
27  
28  
29  
30  
31  
32  
33

#### 34 4.2 Inclusion and exclusion criteria

35  
36 The initial search required that articles retrieved in the review must: (a) be published in a peer-  
37 reviewed journal; (b) be written in English language; and, (c) use the word "transparency" as a  
38 keyword or in the abstract. There was no restriction on publication date or journal. The number  
39 of internal duplicates and external duplicates was tracked. Duplicated articles from the last  
40 database searched were deleted, while new articles were kept. The search resulted in a pool of  
41 537 articles.  
42  
43  
44  
45  
46  
47  
48  
49

50 A further refinement was needed to ensure that all 537 articles were relevant for the  
51 analysis. The refinement process included five steps. In step one, each article's abstract was read  
52 in full and its content scanned to ensure the article not only met the previously listed specified  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 search criteria, but also included “transparency” as a major topic of discussion. Articles that met  
4  
5 the criteria were labeled as “in” for further review, and those that did not meet the criteria were  
6  
7 labeled “out” and removed from any further consideration.  
8  
9

10 Step two included further refinement of the “in” articles for appropriateness by two  
11  
12 judges based on the search criteria. To remain in the pool, the article type had to be either a  
13  
14 conceptual or empirical study (thus not an essay, book review, editorial, literature review,  
15  
16 opinion paper, or journalistic/anecdotal article), with a main focus of discussing transparency in  
17  
18 terms of theory, model development, or case analysis. Two judges read each article thoroughly  
19  
20 and independently, with a particular focus on the extent to which transparency was discussed in  
21  
22 the article. Each article was coded as “in” or “out” based on the specified criteria, with  
23  
24 questionable articles designated as “maybe.” Coding articles as “maybe” avoided removing them  
25  
26 from the consideration set too early in the process; they were set aside for further discussion.  
27  
28 Steps three, four, and five followed the same refinement process, resulting in a final sample set  
29  
30 of 46 peer-reviewed articles.  
31  
32  
33  
34  
35

### 36 *4.3 Sample*

37  
38 The 46 peer-reviewed articles generated from the five-step process outlined above were  
39  
40 published between 2002 and 2013. This final pool contained 25 conceptual articles, 18  
41  
42 qualitative articles and 3 quantitative articles, published across 35 journals. The articles represent  
43  
44 three primary functional areas: marketing, organizational behavior, and political science; there  
45  
46 were 20 marketing articles (43%), 16 organizational behavior articles (35%), and 10 political  
47  
48 science articles (22%). The marketing articles referred to transparency in the contexts of  
49  
50 marketing communications (n = 10), supply chain (n = 5), pricing (n = 4), and marketing strategy  
51  
52 (n = 1). The organizational behavior articles referred to transparency in the contexts of strategic  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 management (n = 6), leadership (n = 4), corporate governance (n = 3), work teams and team  
4 dynamics (n = 2), and negotiations (n = 1). The political science articles addressed transparency  
5 in the contexts of politics (n = 4), management of public programs (n = 3), government policies  
6 (n = 2), and healthcare (n = 1).  
7  
8  
9  
10  
11

#### 12 4.4 Data analysis

13  
14 Data from the sample of 46 articles was abstracted and documented using the *matrix method*  
15 (Garrard, 1999). In this analysis, the following information was abstracted from each article:  
16 article type (conceptual, quantitative, or qualitative), transparency definition, transparency  
17 measures, proposed antecedents, and proposed consequences. Lastly, a *definition evaluation*  
18 *classification* was developed to evaluate the transparency definitions relative to quality of  
19 definition. Based upon synthesis and analysis of the measurement literature (Churchill, 1979;  
20 MacKenzie, 2003; MacKenzie, Podsakoff, and Podsakoff, 2011; Mowen and Voss, 2008;  
21 Rossiter, 2002; Schwab, 1980) five criteria were identified to evaluate construct definitions.  
22 Table 1 describes the quality definition evaluation criteria, which was based on the measurement  
23 literature.  
24  
25  
26

36  
37  
38  
39

40 -----  
41 Insert Table 1 about here  
42 -----  
43  
44

45 For this study, the transparency definitions in each article were evaluated using the definition  
46 evaluation classification. Overall, nine of the 46 articles did not provide a transparency definition  
47 and three other articles adapted definitions currently in the literature. These articles were  
48 removed from the analysis due to a lack of definition or to avoid duplication. If articles provided  
49  
50

60

1  
2  
3 multiple definitions or descriptions of transparency, the first original description or definition  
4  
5 was analyzed.  
6  
7

8 In total, 34 definitions were assessed by two independent judges along the five stated  
9  
10 criteria. In order to ensure that the content analysis for the transparency definitions was reliable,  
11  
12 valid, and objective (Kolbe and Burnett, 1991), the proportional reduction in loss (PRL)  
13  
14 reliability measure was calculated (Rust and Cooil, 1994). The PRL reliability is a “direct  
15  
16 extension and generalization of Cronbach’s alpha to the qualitative case” (Rust and Cooil, 1994,  
17  
18 p. 9). The PRL reliability measure was calculated by dividing the total number of pair-wise  
19  
20 agreements (n = 120) between the two judges by the total number of potential pair-wise  
21  
22 agreements (n = 170) for a total percentage of agreements (71%). The pair-wise percentage of  
23  
24 agreements of 71% corresponds to a PRL reliability of .80 indicating the inter-rater reliability  
25  
26 was adequate.  
27  
28  
29  
30

### 31 32 **5. Findings**

33  
34 The SLR highlights that transparency is being examined in the areas of marketing, organizational  
35  
36 behavior, and political science. To date, the majority of research on transparency is largely  
37  
38 exploratory in nature, with articles being either conceptual (n =25) or qualitative (n =18). Only  
39  
40 three quantitative articles were discovered. As scholars seek to understand transparency as a  
41  
42 distinct field of study, they are publishing across a variety of journals (n =35), which supports  
43  
44 the widespread application of transparency. The following discussion is organized around the  
45  
46 research questions.  
47  
48  
49

#### 50 51 *5.1 How is transparency defined?*

52  
53 In the sample of 46 articles, the majority discuss transparency in terms of an organization’s  
54  
55 “openness” relative to sharing information. While not all authors explicitly used the terms  
56  
57  
58  
59  
60

1  
2  
3 “open” or “openness,” the meaning was generally implied. For example, transparency is  
4  
5 conceptualized as:  
6  
7

- 8  
9 • Openly and freely sharing information (Baker, 2008; Hofstede, 2003; Vaccaro, 2012;  
10  
11 Vaccaro and Sison, 2011)
- 12  
13 • An ability of consumers to see through a deception (Warren, Burns, and Tackett, 2012)
- 14  
15 • Understanding an other’s intentions and goals (Cornand and Heinemann, 2008)
- 16  
17 • Openness within organizations (Bird and Wang, 2011; Jahansoozi, 2006)
- 18  
19 • Sharing what is not usually shared (Eggert and Helm, 2003; Hultman and Axelsson,  
20  
21 2007)
- 22  
23 • Being informed (Eggert and Helm, 2003)
- 24  
25 • Having a shared understanding (Beulens, Broens, Folstar, and Hofstede, 2005; Hofstede,  
26  
27 2003)
- 28  
29 • Being open to giving and receiving feedback (Vogelgesang and Lester, 2009)
- 30  
31 • Being forthright, especially regarding motives and reasons behind decisions (Drew,  
32  
33 Nyerges, and Leschine, 2004; Pirson and Malhotra, 2008; Vogelgesang and Lester, 2009)
- 34  
35 • Freely volunteering information (Baker, 2008)
- 36  
37  
38  
39  
40  
41  
42

43 Overall, the literature is inconsistent in providing a high quality definition, which is  
44  
45 necessary for this expanding field to be solidly grounded and moved forward. Specifically,  
46  
47 transparency as a construct is often misrepresented in literature via imprecise and ambiguous  
48  
49 language or by defining the construct in terms of its antecedents and consequences, which can  
50  
51 lead to measurement problems. For example, in applying the quality definition criteria (see Table  
52  
53 1), judges rated the definition “transparency is strongly related to information” (Bessire, 2005, p.  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 429) as low quality because it lacks specificity in terms of what is being measured and to whom  
4  
5 or what the construct applies.  
6

7  
8 High quality construct definitions must possess measurement, attribute, and entity  
9  
10 specificity, along with conceptual precision and overall clarity (Parris and Welty Peachey, 2013).  
11  
12 This definition clearly lacks the precision necessary to construct valid and reliable scale items.  
13  
14 Moreover, the phrase “related to” implies that it is being defined by a correlate – either an  
15  
16 antecedent or consequence. Most definitions in the sample were classified as either low quality  
17  
18 (n=25) or medium quality (n=7), with similar justifications as noted above.  
19  
20

21  
22 Surprisingly, only two of the 34 definitions met all five of the high quality construct  
23  
24 definition criteria.. For these two definitions, the judges had a clear idea of the construct’s  
25  
26 domain, what was being measured, and who or what the construct was about. Even these high  
27  
28 quality construct definitions, however, are not sufficient for moving the transparency domain  
29  
30 forward.  
31  
32

33  
34 Interestingly, both of the high quality definitions conceptualize transparency differently  
35  
36 than all other articles. Whereas all other articles define transparency relative to being open,  
37  
38 providing learning opportunities, and sharing information with others, these two articles define  
39  
40 transparency relative to internal traits or abilities. This is easily seen in this definition:  
41  
42 “transparency is the ability of consumers to see through a deception” (Warren *et al.*, 2012,  
43  
44 p.123). The primary focus of this definition is that transparency refers to a consumer’s trait  
45  
46 characteristic (ability to detect deception), rather than a firm’s trait characteristic (openness).  
47  
48 Logical measurement items for this definition might include various derivations of “I am able to  
49  
50 detect when someone is lying to me.” Clearly, while this measurement item reflects the construct  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 definition, it does not adequately and directly represent the key transparency themes of  
4  
5 “openness” and “sharing of information” from the organization’s perspective.  
6  
7

8 The second high quality definition is akin to the first. The definition is "transparency is  
9  
10 the tendency for individuals to overestimate the extent to which their internal states and  
11  
12 intentions are apparent to an outside observer” (Garcia: 2002, p. 133), which also reflects a trait  
13  
14 characteristic of oneself rather than an organization. One judge also noted, “this definition  
15  
16 measures ‘illusion of transparency,’ an intrinsic characteristic,” thereby further differentiating it  
17  
18 from the rest.  
19  
20

21  
22 The literature simply does not contain a clear and concise conceptualization of  
23  
24 transparency. Furthermore, the existing definitions neither optimize the balance of specificity  
25  
26 and broadness needed to apply to the entire organization, nor do they address the theme of  
27  
28 “openness” represented throughout the literature.  
29  
30

### 31 32 *5.2 How should transparency be defined?*

33  
34 Based on the synthesis and assessment of the sample and employing the quality definition  
35  
36 classification as a guide, the following definition of transparency is offered:  
37

38  
39 *The extent to which a stakeholder perceives an organization provides learning*  
40  
41 *opportunities about itself.*  
42

43 Unlike the majority of previous definitions (Baker, 2008; Bird and Wang, 2011; Cornand and  
44  
45 Heinemann, 2008; Eggert and Helm, 2003; Hofstede, 2003; Hultman and Axelsson, 2007;  
46  
47 Jahansoozi, 2006; Vaccaro, 2012; Vaccaro and Sison, 2011; Warren, Burns, and Thackett, 2012),  
48  
49 this definition has object of measurement specificity, object attribute specificity, entity  
50  
51 specificity, conceptualization precision, and overall improved clarity over the existing  
52  
53 definitions. See Table 1 for criteria explanations and a more detailed review regarding how this  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 definition meets the quality standards. The definition provides a fundamental conceptual  
4  
5 foundation from which both academics and practitioners can advance transparency theory, and  
6  
7 empirically explore its antecedents and consequences.  
8  
9

10 This new transparency definition conceptualizes transparency in terms of stakeholder  
11 perceptions. Stakeholders most likely form perceptions of transparency during some  
12 communication interaction with a firm. A communication interaction is defined as a  
13 communication event in which information is shared between a firm and a stakeholder. The  
14 interaction can be between a stakeholder and any of a firm's boundary spanning employees or  
15 boundary spanning systems. Boundary spanning employees include salespeople, customer  
16 service representatives, and human resources personnel, whereas boundary spanning systems  
17 include a firm's website, automated phone messages, and email marketing messages.  
18  
19

20 There are numerous examples of both stakeholder-initiated and firm-initiated  
21 communication interactions. With regard to stakeholder-initiated interactions, a stakeholder may  
22 seek or request information from one of an organization's boundary spanners or systems. For  
23 example, a stakeholder may seek or request information from a salesperson while shopping in a  
24 store, from a customer service representative over the phone, or by surfing the organization's  
25 website. Information sought may relate to the organization's products or to the firm's legal,  
26 ethical, and operating practices.  
27  
28

29 Relative to the firm's products, a stakeholder may want to know specific features,  
30 advantages, or benefits of a particular product. With regard to the organization's legal, ethical,  
31 and operating practices, a stakeholder may want to know from which country materials are  
32 sourced for a particular product, the manufacturing processes of and human labor conditions for  
33 the product, or to understand the business wealth and health of an organization. Relative to firm-

56  
57  
58  
59  
60

1  
2  
3 initiated communication interactions, a firm may contact a stakeholder with product updates,  
4 special promotions, and corporate happenings and may do so by various means such as email,  
5 phone, text messaging, and mail. Providing information opportunities for the consumer such as  
6 maintaining a corporate website, distributing news releases, or hosting product information  
7 seminars or manufacturing plant tours, are also examples of a firm initiating communication  
8 interactions. Each communication interaction has the potential to improve stakeholder  
9 perceptions of organization transparency.  
10  
11

### 12 *5.3 How can transparency be improved?*

13 If transparency relates to being open by providing learning opportunities to stakeholders, then  
14 what can organizations do to increase transparency? The literature suggests two key antecedents  
15 that drive stakeholder perceptions of organization transparency. First, organizations should  
16 provide relevant information to stakeholders. Second, organizations should share information in  
17 such a way as to make learning easy for stakeholders.  
18  
19

20 An organization should have relevant information to increase perceptions of organization  
21 transparency. A common theme is that information should be sufficiently relevant to the  
22 audience to enable their decision making. When a firm discloses information about itself to  
23 stakeholders, it sends a “signal” of transparency (DeKinder and Kohli, 2008). However, one  
24 caveat is that the information must be perceived as valuable to stakeholders, and thus relevant.  
25 The Global Reporting Initiative (GRI), a nonprofit organization that helps organizations become  
26 more transparent with regard to reporting, links information relevance to transparency and  
27 suggests that information reported by organizations should be useful, understandable, and  
28 sufficient (GRI, 2006) in order for stakeholders to make informed decisions.  
29  
30  
31  
32

1  
2  
3 “Relevant” means different things in different contexts. For example, in accounting and  
4 finance, transparency refers to companies sharing information about past financial performance,  
5 future forecasts, and current operations (Nielsen, 2004, 2005). Whereas, in marketing,  
6  
7 transparency refers to sharing product-related information such as sourcing of raw materials,  
8 pricing, and terms (AMA, 2010; Epstein and Roy, 2003; Hofstede, 2003; Oh and Lucas, 2006;  
9  
10 Samper and Schwartz, 2013; van Dijk, Duysters, and Beulens, 2003; WOMMA, 2010). In  
11  
12 journalism, transparency refers to disclosing information about the conflicts of interest like when  
13  
14 the writer worked with an interview subject in the past (Allen, 2008). In interpersonal  
15  
16 communications and team dynamics, transparency includes sharing personal information such as  
17  
18 one’s feelings with others (Chadoir and Fisher, 2010; Cozby, 1973; Jassawalla, Sashittal, and  
19  
20 Malshe, 2010). In managing employees and within work teams, transparency includes sharing  
21  
22 the motives, criteria, and reasons behind decisions, the absence of hidden agendas, as well as  
23  
24 being open to giving and receiving feedback (Jassawalla, *et al.*, 2010; Palanski, Kahai, and  
25  
26 Yammarino, 2011; Vogelgesang and Lester, 2009). Finally, in public administration,  
27  
28 transparency refers to sharing decision-making processes, analyses, and outcomes (Drew, *et al.*,  
29  
30 2004; Sparreik, Ellen, and Duijn, 2010). Thus, the information needed changes based on the  
31  
32 stakeholder and the business context. The challenge is that it is up to each organization to  
33  
34 determine its key stakeholder groups and the relevant information desired by each.  
35  
36  
37  
38  
39  
40  
41  
42  
43  
44  
45

46 Unfortunately, these multiple representations of what “is” or “is not” relevant information  
47  
48 to share within, across, and outside organizations creates space for ambiguity and opacity.

49  
50 Outlining and defining *relevant information* should be a key goal of industry organizations,  
51  
52 individual firms, leaders, and employees. In concurrence with Dando and Swift’s (2009) call for  
53  
54 a universal standard for social, ethical, and environmental reporting, the transparency framework  
55  
56  
57  
58  
59  
60

1  
2  
3 presented later is designed to foster the adoption of industry-wide and organizational-wide codes  
4  
5 of conduct addressing the fundamental concepts of transparency.  
6  
7

8           Subsequent to determining what information is relevant, an organization has to determine  
9  
10 how to present this information to stakeholders. Essentially, organizations must facilitate low-  
11  
12 effort learning opportunities for stakeholders to increase perceptions of organization  
13  
14 transparency. The level of organizational learning is positively related to perceived transparency  
15  
16 of an organization (Srivastava and Frankwick, 2011). *Uncertainty reduction* is one common  
17  
18 objective for business communication interactions (Daft and Lengel, 1986). It is important for  
19  
20 organizations to recognize this and enable stakeholders to reduce their uncertainty about the  
21  
22 organization or its products with minimal effort. A stakeholder may seek to reduce uncertainty  
23  
24 by perusing an organization's website or directly communicating with the organization through  
25  
26 email, instant chat, in person, or by phone and may seek information about not only favorable  
27  
28 aspects of the product or firm, but also negative aspects of the product or firm. A stakeholder  
29  
30 may want to know the weaknesses of a product, better understand how a product works or how  
31  
32 it's made, the reasons behind a firm's profit or loss, the level expertise of its staff, or the firm's  
33  
34 partnering companies. According to Uncertainty Reduction Theory (Berger and Calabrese 1975),  
35  
36 individuals will increase information seeking behaviors as uncertainty increases. One way  
37  
38 organizations can reduce information seeking behaviors and increase perceptions of transparency  
39  
40 is by helping stakeholders with their goal to reduce uncertainty. The GRI suggests that  
41  
42 organizations can do this by sharing information that is not only relevant but also complete,  
43  
44 accurate, neutral, comparable, clear, timely, and in a format and language appropriate for the  
45  
46 audience (GRI 2006; Bainbridge 2009).  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3  
4 The literature also suggests that transparency perceptions can be facilitated by sharing  
5  
6 information in a manner that yields learning opportunities requiring little effort. The information  
7  
8 shared needs to be presented clearly (Christensen, 2002; Millar, Eldomiaty, Choi, and Hilton,  
9  
10 2005), completely (Piske, 2002), accurately (Millar, *et al.*, 2005), timely (Beulens, *et al.*, 2005;  
11  
12 Piske, 2002), in easy to access locations (Halachmi and Greiling, 2013; Santana and Wood,  
13  
14 2009; Sparrevik, *et al.*, 2010; Zhou and Zhu, 2010), and in a format desired by those who want it  
15  
16 (Beulens, *et al.*, 2005). Millar *et al.* (2013) emphasize transparency “is the extent to which there  
17  
18 is publicly available clear, accurate information, formal and informal” (p. 166). In conjunction,  
19  
20 Beulens *et al.* (2013) suggest transparency is the “availability of the information necessary...at  
21  
22 the right time and in the right way” (p. 484). Simply disclosing information is not enough to  
23  
24 warrant perceptions of transparency with stakeholders. For instance, pharmaceutical companies  
25  
26 are mandated to disclose certain information in their advertisements such as health risks.  
27  
28 Habitually, the information is disclosed via “fine print,” which is difficult to read and often goes  
29  
30 unread by the very stakeholders who benefit from reading it. Consumers who come in contact  
31  
32 with fine print communication strategies may not perceive this as completely transparent  
33  
34 behavior due to the low accessibility and clarity of the disclosure method. Organizations should  
35  
36 know their stakeholders well enough to understand what a “low effort” learning opportunity  
37  
38 means. It is the organization’s ethical responsibility, and simply a good business practice, to  
39  
40 make it easy for stakeholders to reduce their uncertainty.  
41  
42  
43  
44  
45  
46  
47

#### 48 *5.4 The role of boundary spanners*

49

50  
51 As mentioned above, boundary spanners play a crucial role in an organization’s level of  
52  
53 transparency. Some boundary spanners interact face-to-face with stakeholders, while others may  
54  
55 generate communications that ultimately reach the stakeholders through various channels. It is  
56  
57  
58  
59  
60

imperative that organizations' executives serve as role models for transparency and clarify every boundary spanners' expectations relative to transparency. Without this clarity, individuals will be left to follow their own conscious and evolve into a transparency leader or barrier.

A second boundary spanner issue that executives must be cognizant of involves potentially different transparency 'postures' held by boundary spanners within the same functional area (e.g., marketing, legal). If this pattern is allowed, then stakeholders will receive a mixed message from the organization.

A third issue involves potentially radically different transparency levels among an organization's different functional areas. For example, what if marketing is very transparent, but the production and/or financial areas are very opaque. Again, the organization should strive for a consistent level of transparency, as much as possible.

#### *5.5 How does transparency relate to the perception vs. reality of ethical behavior?*

The reality of ethical behavior (EBr) obviously relates to actual behaviors exhibited by organizational members. While EBr has a profound impact on stakeholder perceptions of ethical behavior (EBp), EBr and EBp are not always equal due to potential intervening variables. But, if both factors are high, as shown in Quadrant II in Figure 1, the organization simply needs to maintain its diligence in ensuring that both continue. However, if either factor is low, then the organization must do something different.

-----

Insert Figure 1 about here

-----

Quadrant I represents a situation in which the EBr is low, but EBp is high. Essentially, the stakeholders are being fooled by the organization's actions. Somehow, the organization is

1  
2  
3 masking unethical behavior and stakeholders are not aware of it. This situation is not likely to  
4  
5 endure. And, when stakeholders become aware of the reality, organizations can fall hard. The  
6  
7 action step needed in Quadrant I involves addressing the poor ethical behaviors.  
8  
9

10 Quadrant III represents low EBr and EBp. The organization's ethical behavior is low and  
11  
12 stakeholders know it. The action needed is to improve poor ethical behavior and make  
13  
14 stakeholders aware of the improvement.  
15  
16

17 Quadrant IV represents high EBr, but low EBp. The organization actually has high  
18  
19 ethical standards and behavior, but stakeholders perceive the organization as having poor ethical  
20  
21 behavior. This is the classic situation in which increased transparency is needed.  
22  
23

#### 24 *5.6 Transparency and ethical codes of conduct*

25  
26 The critical need for greater transparency and its impact on perceptions of ethical conduct  
27  
28 strongly imply that organizations should include transparency in their codes of conduct. Piercy  
29  
30 and Lane (2007) propose that senior management should question all moral and ethical factors  
31  
32 between business buyers and sellers. Business professionals employed at firms with ethical  
33  
34 codes of conduct are significantly less accepting of questionable behavior toward most  
35  
36 stakeholders (McKinney, Emerson, and Neubert, 2010). Dando and Swift (2003) argue that  
37  
38 there is need for a universal standard for the provision of assurance of social, ethical and  
39  
40 environmental reporting, and indeed for the credibility of the assurance providers themselves.  
41  
42 Zappos.com, an online shoe and handbag retailer, represents Quadrant II above exceptionally  
43  
44 well: it has made transparency a central part of the value proposition they offer to the  
45  
46 marketplace, and the market has rewarded them for it. Zappos.com, operates with transparency  
47  
48 as one of the company's 10 core family values. And the company acts on this core value. As  
49  
50 just one example, on April 26, 2010, Zappos.com launched a live webcast of its internal "All  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 Hands” quarterly employee meeting. The live broadcast included several hours of video to  
4  
5 include pre-meeting, meeting, and happy hour activities. On the Zappos.com blog, an employee  
6  
7 blogger wrote: “We invited the world to tune in live to our 'internal' meeting. For those who  
8  
9 know the basics of how Zappos.com is run, you probably know that we're all about transparency  
10  
11 so it only made sense to invite anyone and everyone to sit in on our largest meeting of the  
12  
13 quarter” (Zappos.com, 2010). Zappos.com has been rewarded for its transparency: it was  
14  
15 recognized in 2009, 2010 and 2011 by FORTUNE Magazine as one of the 100 Best Companies  
16  
17 to Work For, was one of only 40 U.S. companies named a J.D. Power 2011 Customer Service  
18  
19 Champion, and was valued at \$1.2B in 2009 when it was acquired by Amazon.com (in part for  
20  
21 its best-in-class culture).  
22  
23  
24  
25  
26

27 Like Zappos.com, firms who want to engage in responsible business practices should  
28  
29 recognize calls by stakeholders for increased transparency as important: firms should incorporate  
30  
31 transparency into their ethical codes of conduct as a value proposition they offer to the  
32  
33 marketplace. Businesses should consider the below verbiage as a starting point for inclusion into  
34  
35 their existing codes of conduct:  
36  
37  
38

- 39 • We commit to providing transparency to our stakeholders by:
  - 40 ○ Providing relevant information that is important to you in a timely manner,  
41 without delay, that is free from bias.  
42
  - 43 ○ Sharing not only the good stuff about our business, but also where we  
44 could use improvement.  
45
  - 46 ○ Affording you an opportunity to easily engage in open dialogue with us.  
47
  - 48 ○ Giving you an inside look into how we operate to include why we make  
49 the decisions that we do.  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

## 6. Proposed transparency framework

A conceptual framework emerged from the data. It describes when transparency is especially important, what organizations can do to be more transparent, and the potential benefits of transparency (see Figure 2).

-----

Insert Figure 2 about here

-----

This framework is applicable at both the macro and micro-organizational levels. At the macro level, for example, executive leadership teams may find this framework useful as a starting point for developing transparency strategies. At the micro level, each department and boundary spanner can utilize this framework to help guide their transparency efforts with their particular stakeholders. The transparency framework suggests it is important for each department to not only know who its key stakeholders are, but also to clearly understand what information each stakeholder group needs and how they need it. This endeavor requires that transparency initiatives be grounded from the voice of the stakeholder, rather than the intuition of employees. Hence, some marketing and communication-related research may be required. Each department within the organization should ask its stakeholders the following questions:

- Are we currently providing you with the information you need? If not, what information do you need from us?
- What can we do differently to get you the information you need?
- How can we make it easy for you to get the information you need?

Salespeople, for example, can ask these questions to customers, human resources employees can ask these questions to the organization's employees, the executive leadership team can ask these

1  
2  
3 questions to investors, and so on. Perceptions of transparency may increase simply by asking  
4 these questions. Of course, some stakeholders may want information that could never be shared,  
5 such as proprietary formulas and processes, or even strategy data that, if shared, could weaken  
6 the organization against the competition. It is important to communicate the reasons behind the  
7 organization's decision to keep this information private. It is possible that providing reasons for  
8 decisions not to share information may counteract any negative effects caused by withholding  
9 that information, so long as the reason communicated is agreeable to the stakeholder. For  
10 example, responding to stakeholder inquiries with, "it's just not our policy to share that  
11 information" lacks the reason behind withholding the information and would most likely cause  
12 decreased perceptions of an organization's transparency. This approach can lead to decreased  
13 trust, unfavorable attitudes toward the organization, and lowered purchase intentions. Consider  
14 more thoughtful responses that incorporate why the organization is unable to provide the  
15 information to curb such side effects.  
16  
17

34  
35  
36  
37  
38

### 39 *6.1 Develop a transparency scorecard*

40  
41 With a little research, an organization should be able to develop a customized  
42 *transparency scorecard*, perhaps organized into the "dashboard indicator" format. The first step  
43 involves identifying all of the organization's key stakeholders, such as customers, government  
44 agencies (e.g., regulatory, legislative, tax-related), investors/stockholders, employees, suppliers,  
45 creditors, community/public, unions, media, activist groups, and business support groups. For  
46 each group chosen, a sampling of individuals in that stakeholder group could be surveyed  
47 utilizing a small set of questions (perhaps with a 5-point scale), such as:  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

- 1
- 2
- 3
- 4 1. Overall, are you satisfied with the information available to you about our organization?
- 5
- 6 2. Are you satisfied with the extent that the information is easily and readily available?
- 7
- 8 3. Do you find the information you access easy to understand?
- 9

10 This kind of information should be easy to obtain and transform into a functional dashboard.

11 Should any of the dashboard indicators hit the “red zone,” then the organization should seek  
12  
13 additional information for that particular stakeholder group. This research should seek answers  
14  
15 to questions that involve what, why, when, where, how much, and so on.  
16  
17

## 18 19 20 21 **7. Conclusion**

22  
23 The 21st century has been marked with numerous ethical lapses by businesses. Consequently,  
24  
25 stakeholder confidence in an organization’s abilities to operate within the constraints of social,  
26  
27 ethical, and environmental standards has diminished (Hein, 2002; Hein, 2002). The mounting  
28  
29 calls by stakeholders to improve the ethical decision making of businesses have led to the rise of  
30  
31 research in transparency within the last decade. As evidence of this trend, zero papers in the  
32  
33 sample were published prior to 2002. To date, the majority of research on transparency is  
34  
35 conceptual or qualitative with a limited number of quantitative studies. Scholars are still  
36  
37 attempting to conceptually define and measure transparency, which could be one reason why this  
38  
39 body of literature has not made strides in quantitatively understanding transparency’s  
40  
41 antecedents and consequences.  
42  
43  
44  
45

46  
47 This systematic literature review is the first review and synthesis of peer reviewed  
48  
49 journals exploring transparency in organizational contexts. In alignment with the subject of this  
50  
51 paper, a rigorous methodology was done in a systematic, transparent, and reproducible manner.  
52  
53 The effort to discover how transparency is defined revealed that one prominent void in this  
54  
55 burgeoning field was the lack of a definition of the fundamental construct of transparency. A  
56  
57  
58  
59  
60

1  
2  
3 quality definition classification was therefore developed and applied in order to evaluate  
4  
5 transparency definitions identified in the sample and provide a guide for content analysis. Thus,  
6  
7 this study also contributes to the methodology of evaluating construct definitions to advance  
8  
9 empirical research. The findings illustrate that not only is there a lack of a concise definition of  
10  
11 transparency but also that these definitions are either not applicable organizational wide or not  
12  
13 representative of the central theme of “openness” found in the sample. Based upon this process  
14  
15 and using the classification as a guide, transparency is defined as *the extent to which a*  
16  
17 *stakeholder perceives an organization provides learning opportunities about itself.* This  
18  
19 definition provides a conceptual foundation from which both academics and practitioners can  
20  
21 advance transparency theory and empirically explore its application.  
22  
23  
24  
25  
26

27  
28 Next, this review explored the antecedents and consequences of transparency. This  
29  
30 process led to the development of a transparency framework (Figure 1) which supports the  
31  
32 growing notion that transparency can improve the social, ethical, and environmental practices of  
33  
34 organizations. The proposed model describes when transparency is especially important, what  
35  
36 organizations can do to be more transparent, and the potential benefits of transparency. The  
37  
38 transparency framework can be used as a guide for organizations attempting to change their  
39  
40 behavior, image, and performance by adopting transparency as value in their organization. At its  
41  
42 core, transparency means that a firm is open with stakeholders, granting access to, at a minimum,  
43  
44 information that allows stakeholders to better understand the company, its products, and reasons  
45  
46 for certain actions and decisions. In addition, the framework can be used to create and adopt a  
47  
48 universal (i.e., industry-wide or even societal-wide) code of conduct. Furthermore, this review,  
49  
50 definition, and framework provide a template for academics to advance transparency theory, and  
51  
52 empirically test the construct’s application.  
53  
54

59  
60

Lastly, this review sheds light on the favorable impacts of transparency. The findings indicate that benefits are gained by organizations as well as its employees, customers and partners, and society when transparency is present. If companies are seeking to improve their triple bottom line, their ethical decision making, and their competitive advantage this review demonstrates it would be wise for them to facilitate the adoption of transparency within their organization and their industry. Stakeholders and the challenges of the 21st century have created a demand for transparency sparking the development of this new field, and the need for continued discussion.

It is proposed that organizations which make a conscious proactive decision to be transparent will be rewarded by its stakeholders for such ethical behavior; and conversely, financial institutions, governments, and businesses that do not listen to the call for increased transparency will be punished by its stakeholders to include further increased skepticism and lack of trust, and ultimately the sale going to the most transparent competitor.

Table 1

## Quality Definition Evaluation Criteria

Criteria	Criteria Explanation	Definition Evaluation
Object of Measurement Specificity	Definition explicitly states the focal object for the construct (i.e. what is being measured).	This definition meets the criterion of object of measurement specificity. What is being measured is the extent of perceived learning opportunities provided by an organization.
Object Attribute Specificity	Definition includes whether construct is a : thought (cognition, value, intention, subjective norm), feeling (attitude, emotion), perception, action (behavior, activity), outcome, or intrinsic characteristic (e.g. cognitive ability, structure, speed, conscientiousness)	This definition meets the criterion of object attribute specificity. That which is being measured is a perception. This clearly distinguishes transparency as being measured from the stakeholder's point of view, rather than from the organization's point of view.
Entity Specificity	Definition includes the object to which property applies (a person, relationship, dyad, group/team, network, organization)	This definition meets the criterion of entity specificity. The object to which the property applies is an organization. The organization is the entity that is being evaluated. Depending on the context in which transparency is measured, "organization" could also refer to specific departments.
Conceptualization Precision	Construct is not defined in terms of examples as evidenced by words such as "related to", "similar to", "includes", "involves", or "described as"; construct is not defined in terms of its antecedents or consequences as evidenced by words such as "result of", "cause of", etc. indicating a causal relationship between it and another construct; and construct is defined in terms of what it is rather than what it is not.	This definition meets the criterion of conceptualization precision as it is not defined in terms of antecedents or consequences. It is suggest that two key antecedents of transparency include: sharing relevant information and enabling low-effort (easy) learning opportunities. Numerous consequences of transparency suggested in the literature are cited. None of the antecedents or consequences is mentioned in this transparency definition.
Overall construct clarity	Definition is written parsimoniously with clear, unambiguous terms.	This definition meets the criterion of overall construct clarity. An organization's "learning opportunities" includes anything it does or provides to facilitate stakeholder learning.

**Figure 1**

Perception and Reality of Ethical Behavior Grid

Perception of Ethical Behavior	Very high	QUADRANT I High perception + Low reality  <i>Stakeholders are being                  fooled – condition not                  likely to endure –                  actual behavior must                  change</i>	QUADRANT II High perception + High reality  <i>The ideal situation –                  efforts to maintain                  needed</i>
	Very low	QUADRANT III Low perception + Low reality  <i>Stakeholder                  perceptions accurate –                  major efforts need to                  change behavior and                  communicate the new                  behavior</i>	QUADRANT IV High reality + Low perception  <i>Likely a low level of                  transparency exists                  – greater efforts to                  achieve                  transparency                  needed</i>
