INTRODUCTION

This is a bibliography with a point of view. It takes as a departure point the U.S. Navy-Marine Corps Maritime Strategy of the 1980s, as enunciated by the civilian and military leaders of the U.S. Government, especially the Department of the Navy. It includes criticisms of and commentaries on that strategy, as well as items relating the Maritime Strategy to overall national and allied military strategy, and to historical precedents. In addition, it covers both how the Strategy was developed and who developed it, and the important role of wargaming.

The Maritime Strategy has generated enormous debate. All sides and aspects of the debate are presented here. The focus, however, is on that Strategy. Absent are discussions of naval affairs which do not have as their points of departure--explicitly or implicitly--the contemporary Maritime Strategy debate.

In order to trace the ebb and flow of ideas and events over time, items are listed chronologically, by occurrence or publication date, rather than merely alphabetically. Authoritative official statements of the Maritime Strategy are indicated by an asterisk (*). Explicit direct commentaries on the Maritime Strategy are indicated by a double asterisk (**). The other items listed deal implicitly with various issues or aspects of the Maritime Strategy or with its immediate antecedents.

Publications on Sister Service and Allied contributions to the Maritime Strategy are listed separately, to aid the reader/researcher (Admittedly, this and other artificial typological devices run against the central theme of the Maritime Strategy: its global, "seamless web" character). Also, only cursory attention is paid to pre-1981 Navy strategic thinking on global war, a structural shortcoming that can legitimately be cited as evidence that such thinking was lacking.

I. MARITIME STRATEGY DEBATES: 1979-1985

American military strategy and its maritime component have been debated since the foundation of the republic. Following World War II, maritime strategy concerns centered around peacetime presence, antisubmarine warfare (ASW), and the Navy's role in nuclear strike warfare against the Soviet Union. During the late 1950s and 1960s the focus shifted to limited war and deterrence through nuclear-powered ballistic missile submarine (SSBN) operations. In the early 1970s, the debate centered on then Chief of Naval Operations Elmo R. Zumwalt's formulation of the "Four Missions of the Navy"--strategic deterrence, sea control, power projection, and peacetime presence. (A major body of literature began to be created then on presence). In the mid-1970s, sea control seemed to dominate discussions.

In 1978, Admiral Thomas B. Hayward became Chief of Naval Operations. His views on strategy had been heavily influenced by his experience as Seventh Fleet Commander and Pacific Fleet Commander-in-Chief in the post-Vietnam environment. Admiral Hayward's focus was on flexible offensive forward power projection, conducted globally and in conjunction with allies and sister services, especially against the Soviet Union and its attacking forces. Much of this was a return to concepts familiar to U.S. naval officers of the first post-World War II decade. That era's focus on nuclear strikes, however, now broadened to encompass a much wider range of options, primarily conventional.

Admiral Hayward outlined his views publicly in his initial 1979 testimony before Congress, and subsequently in the pages of the Proceedings. The naval strategic renaissance and the resultant debate he and others sparked continues to this day, fueled by the statements and policies of the Reagan Administration, especially its first Secretary of the Navy, John F. Lehman, Jr., who served from February 1981 to April 1987.

The initial public Maritime Strategy discussion of the early 1980s had largely taken the form of a debate on the pages of American public and foreign affairs and national security periodicals. This debate had focused on two themes: the general forward strategic principles (and certain highly publicized Norwegian Sea examples) enunciated repeatedly by Secretary of the Navy John F. Lehman, Jr. and a perceived "Maritime Strategy versus Coalition Warfare" dichotomy incessantly alleged by former Under Secretary of Defense Robert Komer and others.

At the same time, however, the staffs of the Chief of Naval Operations and the Commandant of the Marine Corps -- in conjunction with officers of their sister services and allies -- had been tasked to develop for internal use a detailed description of the Maritime Strategy component of U. S. national military strategy. This Maritime Strategy rigorously integrated into one clear, consistent document a number of long held views of Navy and Marine Corps senior officers, certain newly refined concepts developed in the fleet and at the Naval War College, agreed national intelligence estimates, the strategic principles articulated by Secretary Lehman and other Reagan Administration officials, and a thoughtful discussion of the variety and range of uncertainties inherent in the strategy.

Concepts developed by the Navy's warfare communities and fleets as well as by Army, Air Force, joint, and allied commanders, were examined and incorporated as appropriate. Where inconsistencies appeared, hard choices were made. Uncertainties and limitations were identified. Properly, the job was spearheaded by the Strategic Concepts Group on the staff of the Chief of Naval Operations (OP-603

The U.S. Navy-Marine Corps Maritime Strategy was codified initially in 1982 to focus Navy program development efforts more tightly. Its basic premises already had been underlying Navy planning, and exercises. Subsequently, congressional testimony in 1983 released an initial edition of the Maritime Strategy to the public. A classified revision to the strategy statement was approved by the Navy's Program Review Committee (chaired by then Vice Admiral Carlisle Trost) in October 1983 and signed and distributed Navy-wide by Admiral James D. Watkins, then Chief of Naval Operations, in 1984.

Various unclassified elements of the strategy began to find their way into naval affairs journals, especially the Proceedings. Writing on naval strategy that did not take the Maritime Strategy as a starting point began to fade. By 1985, enough authoritative congressional testimony, speeches, op-ed pieces, journal articles, and letters-to-the-editor -- penned by senior naval officers and well-placed civilian commentators -- had appeared for the essential elements of the Maritime Strategy to be accessible to the public. Public commentary gradually shifted from exegeses on the press conferences, speeches, and articles of Secretary Lehman and Ambassador Komer to discussions on aspects of the actual Maritime Strategy developed largely by military officers from national and alliance guidance and approved by civilian leadership.

Promulgation of the Maritime Strategy fostered increasing public and government discourse. Within the Navy, the interplay among the Maritime Strategy, force-level planning, fleet plans and operations and professional education and training became a governing dynamic. In the open literature, the number of writings on the strategy rose from a handful of newspaper and journal articles in 1981 to an avalanche of government documents, books, and articles in 1986, including over 145,000 copies distributed of the Proceedings' watershed "The Maritime Strategy" January 1986 supplement alone. This quantitative leap was accompanied by qualitative changes in both the background of the commentators and the sophistication of their arguments.

Contrary to much uninformed external criticism of the early 1980s, the Maritime Strategy was presented by the Navy as only one--albeit a vital--component of the national military strategy. It was not presented as a recommended dominant theme of that national strategy. Also contrary to earlier uninformed criticism, the strategy embodied the views of unified and fleet commanders as well as Washington military and civilian planners and Newport thinkers. The Navy Department and the fleet were now speaking with one sophisticated voice to--and increasingly for--the nation and its allies.

Arguments against a "swing" strategy from the Pacific are also echoed in "For Want of a Nail: the Logistics of the Alliance" by ADM Isaac Kidd USN (Ret.), former U.S. Navy and NATO commander in both the Mediterranean and the Atlantic, in the same volume, pp 189-205).

II. THE MARITIME STRATEGY DEBATE: 1986: THE WATERSHED YEAR

In late 1985, Secretary Lehman, Admiral Watkins, and General Kelley -- having ensured that the Maritime Strategy met their requirements and represented both their thinking and that of their superiors -- submitted manuscripts containing the strategy's basic tenets -- less its uncertainties and limitations -- to the Naval Institute. Following the publication of "The Maritime Strategy," a special supplement to the January 1986 Proceedings, public discussion of the strategy took on a new, sophisticated tone, more relevant to the actual requirements of U.S. national security decision making. Subsequent statements by President Ronald Reagan, Secretary of Defense Caspar Weinberger and others confirmed for the public that the strategy was consistent with higher civilian and military defense guidance.

In the United States and abroad, discussions ranging from global warfare with the Soviets to naval history, fleet balance, and peacetime and crisis operations became suffused with the vocabulary and concepts of the Maritime Strategy. Much of the writing was now done by senior military officers. Most notably, a spate of broad-gauged articles by naval aviation, surface, and submarine warfare specialists appeared, transcending narrow "unionism." Knowledgeable civilian strategic thinkers and historians also offered their cogent commentary on the Strategy.

Proceedings now served as the primary forum, along with the Naval War College Review, Sea Power, and Naval Forces. The arena, however, also broadened to include more newspapers and popular magazines. The public affairs and national security journals rediscovered the Maritime Strategy, but now in a manner that brought together not only academics, pundits, and military retirees, but also serving naval professionals. By 1987, the uniformed naval officer corps once again -- as in the days of Alfred Thayer Mahan or of the pre-World War II War Plan Orange -- had captured the high ground and catalyzed thinking about the Navy's role in national and alliance strategy.

III. THE DEBATE CONTINUES: 1987 AND BEYOND

The first half of 1987 saw the Maritime Strategy firmly in place as an acknowledged vital element of U.S. and allied military strategy. President Reagan, Defense Secretary Weinberger, Deputy Defense Secretary Taft, and Chairman of the Joint Chiefs of Staff Crowe, all publicly cited its importance and utility. Likewise, James H. Webb, Jr. (John Lehman's successor as SECNAV), Admiral Carlisle Trost (Admiral Watkins' successor as CNO), and a number of other top flag officers provided numerous examples of the extent to which it had become the common strategic framework of the naval leadership. Perhaps the best illustration of this phenomenon was, however, the July 1987 issue of the Proceedings. Therein, the Maritime Strategy formed the baseline for a wide range of discussions of specific U.S. and allied peacekeeping and warfighting issues: by active duty U.S. Navy junior officers, senior officers, and admirals; by naval aviators, surface warfare officers, submariners and a Marine; and by officers concerned with inter-allied relations, regional strategic objectives, fleet operations, and weapons system employment and development.

The second half of 1987 and 1988 promise to add yet another dimension to the discussion: a number of book-length treatments of the Maritime Strategy and related subjects are scheduled for publication. That the 1980s saw a long-needed burgeoning of naval strategic thought, both in the United States and abroad, has become indisputable. What remains to be seen is what use future generations of planners, policymakers, and thinkers will make of this outpouring.

(It) enables us to capitalize on Soviet geographic vulnerabilities and to pose a global threat to the Soviet's interests. It plays a key role in plans for the defense of NATO allies on the European flanks. It also permits the United States to tie down Soviet naval forces in a defensive posture protecting Soviet ballistic missile submarines and the seaward approaches to the Soviet homeland...").

(Solid concurrence in the Maritime Strategy by the Chairman of the Joint Chiefs of Staff: "In recent years we have benefited from some excellent conceptual thinking by the Navy about global maritime strategy--how to phase operations in a transition from peace to war, clear the way of submarines opposing military resupply or reinforcement shipping, and use our carrier battle groups for either offensive strikes or in direct support of such allies as Japan, Norway, Greece, and Turkey. It is imperative, of course, to fold these concepts into our larger military strategy and that is exactly what we are doing").

IV. SISTER SERVICE CONTRIBUTIONS TO AND VIEWS ON THE MARITIME STRATEGY

The Maritime Strategy fully incorporates U.S. Navy, Marine Corps, Coast Guard, Air Force and Army contributions to the global maritime campaign. In fact, the case can be made that more thought has been given to actual joint combat operations (as opposed to problems of command relationships or lift) by the Navy and Marine Corps in codifying the Maritime Strategy than by either the Air Force or the Army in developing their own "cornerstone" publications. The open literature on potential Army contributions to maritime warfare -- such as air defense batteries based in islands and littoral areas -- is particularly weak.

U.S. Joint Chiefs of Staff, Unified Action Armed Forces (JCS Pub. 2), Washington: The Joint Chiefs of Staff, December 1986. (Reflecting the National Security Act of 1947, as amended, The Goldwater-Nichols Department of Defense Reorganization Act of 1986, Title 10 and Title 32 U.S. Code, as amended, and DOD Directive 5100.1 (The "Functions Paper"), JCS Pub. 2. governs the joint activities of the U.S. armed forces. See especially Chapter II, Sections 1 and 2-3, charging each Military Department, including the Navy, to "prepare forces ... for the effective prosecution of war and military operations short of war". This responsibility (and not --as some critics charge--a desire to somehow usurp the authority of the JCS or the Unified and Specified Commanders) was the primary impetus and justification for Navy and Marine Corps development, promulgation, and discussion of the Maritime Strategy. It is the Navy Department's framework for discharging its responsibilities to "organize, train, equip and provide Navy and Marine Corps forces for the conduct of prompt and sustained combat incident to operations at sea").

U.S. Army, Operations (FM 100-5), Washington: Department of the Army, 20 August 1982. (The Army's "keystone warfighting manual" and therefore a building block of the Maritime Strategy. Almost no discussion of Army-Navy mutual support, however, e.g.: air defence and island/littoral reinforcement. Included on p 17-7 a useful discussion of the importance and essentially maritime nature of the NATO northern and southern European regions. Superseded in May 1986; distribution now restricted to U.S. government agencies).

U.S. Air Force, Basic Aerospace Doctrine of the United States Air Force (AFM 1-1), Washington: Department of the Air Force, 16 March 1984. (The "cornerstone" Air Force doctrinal manual and therefore a building block of the Maritime Strategy. Takes a somewhat narrower view of potential areas of mutual support than does the Navy. See especially the discussion of objectives of naval forces on p 1-3, neglecting projection operations, e.g. strike or amphibious warfare; and pp 2-15, 3-1, and 3-5/3-6, covering possible Air Force actions to enhance naval operations, virtually all of which are incorporated in the Maritime Strategy. Note, however, the lack of mention of any concomitant naval role in enhancing "aerospace" operations, and the lack of discussion of USAF AAW contributions to maritime warfare, a key element of the Maritime Strategy).

V. ALLIED CONTRIBUTIONS TO AND VIEWS ON THE MARITIME STRATEGY

The Maritime Strategy as developed by the U.S. Navy of the 1980s is heavily oriented toward combined (and joint) operations, and this was reflected in the Proceedings January 1986 Supplement, "The Maritime Strategy". The postwar U.S. Navy had never been "unilateralist". Allied contributions to the global campaign were worked out years ago and then had been continually updated in the drafting of allied war plans, Memoranda of Agreement, and other documents. They have been routinely discussed at annual Navy-to-Navy staff policy talks and CNO-to-CNO visits, held between the U.S. Navy and each of its most important allied associates. Thus most of the hard bargaining and tradeoffs had already been done, and integrating allied efforts with the U.S. Navy component of the Maritime Strategy was not particularly difficult. Once the Maritime Strategy was drafted, it was briefed to key allied CNOs and planning staffs and to NATO commanders. Allied feedback was considered and utilized in updating revisions to the Strategy, and the process continues today.

Allied naval strategy -- and its relationship to the Maritime Strategy -- is well enough documented. The NATO Information Service is prolific, and NATO commanders author relevant articles frequently. Most allied defense ministries publish occasional or annual "Defense Reports" and/or "White Papers" which sometimes touch on naval strategy as well as policy and procurement issues. As is evident from these and other writings, U.S. Navy and allied military thought is generally congruent.

VI. SOVIET STRATEGY AND VIEWS

U.S. and allied Maritime Strategy is not a game of solitaire. The Soviet threat -- along with U. S. national and allied interests and geo-political realities -- is one of the fundamental ingredients of that strategy. No attempt can be made here, however, to recount the considerable literature that exists on Soviet naval affairs. The focus in the relatively few works listed below is how the Soviets view their own maritime strategy as well as ours, and how correctly we have divined their views. A critical issue is which missions they see as primary and which they see as secondary, for their navy and for those of the west, and whether these priorities will change soon. Much material on the Soviets also can be found in other entries in this bibliography.

VII. PEACETIME, CRISES, AND THIRD WORLD CONTINGENCIES

Most of the above works deal principally with use of the Navy in general war. What follows are books and articles of the 1970s and 1980s discussing the uses of the U.S. Navy in peacetime, crises, and "small wars" (the "Violent Peace" of the Maritime Strategy). Many of these derive from the increased discussion of peacetime presence as a naval mission engendered by Admirals Elmo Zumwalt and Stansfield Turner in the early 1970s. Thus, the contemporary era of U.S. Navy thought on peacetime presence operations began about five years prior to that on forward global wartime operational concepts. Both bodies of thought, however, have build on the earlier literature of the late 1950s and 1960s on the role of the U.S. Navy in limited war.

While most of the items listed below focus on the U.S. Navy, there is a significant literature on the peacetime/crisis/"small war" activities of the Royal Navy and the Soviet Navy as well, some of the most important elements of which have been included here. In addition, certain of the "White Papers" and "Defense Reports" published by various defense ministries around the world routinely highlight the peacetime operations of their naval forces. Especially notable in this regard are the annual British "Defense Estimates" and Canadian "Annual Reports."

VIII. FLEET BALANCE: ATLANTIC VS. PACIFIC VS. MEDITERRANEAN

Geographic flexibility is one of the great strengths of naval power. Yet the U. S. Navy's global posture since World War II has often looked like a series of hard-and-fast theater commitments, more appropriate to less flexible land-based types of forces. The articles and letters below illustrate current problems of implementing a balanced global Maritime Strategy with limited naval forces in the face of competing regional demands. They were selected because of their focus on the need for hard choices by the Navy regarding fleet balance; articles merely trumpeting the importance of an area or discussing regional priorities solely at the geopolitical level are omitted.

Essentially an update of Hinge's August 1986 article, cited in Section II above).

As is well discussed in previous sections, U.S. and allied navies, other services, and joint and allied commands have a variety of means at their disposal in peacetime to test the wartime validity of aspects of the Maritime Strategy, besides debate and discussion. They actually participate in fleet exercises, advanced tactical training, and "real world" peacetime and crisis operations, and they conduct extensive operations analyses and war games. Most of these avenues are generally inaccessible to the public, however, save one: gaming. There are over a half-dozen commercial board and computer games now available that can provide players with insights into modern maritime strategic, operational, and tactical problems and potential solutions, and thereby further enhance players' understanding of the Maritime Strategy. Like all simulations, however, they each have their limitations, and even built-in inaccuracies (as the various reviews point out). Thus they cannot by themselves legitimately be used to "prove" validities or demonstrate "outcomes". Nevertheless, playing them is the nearest many students and theorists of Maritime Strategy can ever come to actually "being there", and therefore is an activity that can only be encouraged.

"The Navy is continuing a process of using wargaming, exercises, and analysis to address the aspects of major issues for which they are best suited... a classic example of this process can be seen at work in the 2nd Fleet. Taking the promulgated maritime strategy as his starting point, the commander, 2nd Fleet, proposed a concept for operating the NATO Striking Fleet in the Norwegian Sea. A wargame was held at the Naval War College to explore this concept, and analysis was undertaken to quantify some of the issues raised by the game. Then an exercise was held in the area of interest, which confirmed some assumptions and raised new questions. A new series of games and analysis was capped by a second major exercise, as the process continues"). See also his "What Wargaming is and is Not", co-authored by LCDR Raymond T. X. ANTECEDENTS

The general and historical literature on naval strategy is admittedly vast. What is presented here are only books that describe earlier strategies -- conceptualized, planned and/or implemented -- which are analogous to key aspects of the U. S. Navy's Maritime Strategy today. The materials are generally listed chronologically, by historical period covered.

Till, Geoffrey, Maritime Strategy and the Nuclear Age, (Second Edition), New York: St. Martin's, 1984. (Basic one-volume historical and topical survey.)

Callwell, Major C.E., BA, The Effect of Maritime Command on Land Campaigns Since Waterloo, Edinburgh: William Blackwood and Sons, 1897 (especially pp 178-182 and 196-197); Barker, A. J., The War Against Russia, 1854-1856, New York: Holt, Rinehart and Winston, 1970; Curtiss, John Shelton, Russia's Crimean War, Durham, N.C.: Duke University Press, 1979; and Rich, Norman, Why the Crimean War? A Cautionary Tale, Hanover, NH: University Press of New England, 1985 (especially pp 124-126, 136-137, 158-159, 178, 201-202, 206-209). (Successful maritime global forward coalition strategy against Russia 130 years ago, with operations in Barents, Baltic, and Black Seas, and off Kuriles and Kamchatka. ** Mahan, CAPT Alfred Thayer, "The Problem of Asia", in his The Problem of Asia and Its Effect Upon International Politics, Cambridge MA: University Press, 1900, pp 1-146. (Mahan on "restraining Russia", the central problem of the Maritime Strategy: "The Russian centre cannot be broken. It is upon, and from, the flanks... that restraint, if needed, must come" (p 26); "hence ensues solidarity of interest between Germany, Great Britain, Japan and the United States" (p 63)). See also Trofimenko, in Section VI above, and Crowl, Philip A., "Alfred Thayer Mahan: The Naval Historian", in Paret, Peter (ed.), Makers of Modern Strategy: From Machiavelli to the Nuclear Age, Princeton NJ: Princeton University Press, 1986, pp 444-477, especially p 477. (A Naval War College professor emeritus asserts the Maritime Strategy is antithetical to Mahan's teaching, especially as regards the role of other services, in a book which otherwise--and to its detriment--pays scant attention to makers of modern maritime strategy. Trofimenko gets the linkage between Mahan and the Maritime Strategy right. Crowl gets it wrong).

Bartlett, Henry C., "Approaches to Force Planning", Naval War College Review, May-June 1985, pp 37-48. (By a Naval War College faculty member. Provides eight approaches to Force Planning, but each such "approach" can--and does--apply to the drafting of Strategy as well. They are presented by the author as pure types, stark alternatives, but in actual practice (for example, in the development of the Maritime Strategy) their influence on the strategist is often simultaneous, to a greater or lesser degree. His list of approaches: "top-down", "bottom-up", "scenario", "threat", "mission", "hedging", "technology", and "fiscal". The first four were probably the most important influences on the Maritime Strategy of the late 1940s-early 1950s and the 1980's; "Mission" and "hedging" were relatively more important from the late 1950s through the mid-1970s. "Threat" influences tended to be driven more by perceived capabilities in the 1940s through the 1970s and more by perceived intentions in the 1980s. Critics tend to focus on "technology" and "budget" influences. There is actually also a ninth approach, "historical/academic" approach, which tends to focus the strategist on "lessons of history" and/or the great classics of military thought. All these approaches coexist with the organizational and psychological influences on war planning identified by Jack Snyder. The remaining citations in this section give examples, drawn primarily from the Maritime Strategy debates).

XII. MAKERS OF MODERN NAVAL STRATEGY: PEOPLE AND INSTITUTIONS

The Maritime Strategy was originally drafted primarily--although certainly not exclusively--by U.S. naval officers for U.S. naval officers. Not only were agreed national, joint, and allied intelligence estimates and concepts of operations utilized as fundamental "building blocks", but great importance was also attached to long-held views of the U.S. Navy and Marine Corps leadership, to the concepts of operations of the fleet commanders-in-chief, and to the views of thinkers in uniform (active duty and reserve) at the Naval War College and the Center for Naval Analyses.

Much of what is in the Maritime Strategy is hardly new, and would be especially recognizable to naval officers who developed U.S. and allied naval warfighting concepts in the late 1940s and 1950s. Likewise, elements from key strategy products of naval officers and civilian thinkers of the late 1970s--e.g. the 1976 National Security Council Maritime Strategy study, naval reservist John Lehman's 1978 Aircraft Carriers, and the Navy's 1978 Sea Plan 2000 and Strategic Concepts of the U.S. Navy (NWP 1 (Rev.A))--are also evident in the Maritime Strategy of the 1980s.

Much of what is new in the Maritime Strategy is the linked, coherent discussion of (a) global warfare--rather than separate service and theater operations; (b) warfare tasks--e.g. anti-submarine, anti-air, anti-surface, strike, amphibious, mine and special warfare--rather than traditional "platforms" or "unions"; (c) the specific geopolitical problems facing the U.S. Navy-- and other maritime elements--of the 1980s; and (d) the current conventional wisdom regarding Soviet Navy capabilities and intentions. This approach was largely driven by the primacy of the need for the Strategy to satisfy current global operational requirements of fleet and other force commanders, over the future requirements of competing bureaucracies in Washington. Its effect in fostering common reference points for all portions of the contemporary officer corps, especially junior officers, is already being felt.

While much of the robustness of the Maritime Strategy derives from its roots throughout the U.S. Navy and Marine Corps and elsewhere, both over space and over time, it owes a high degree of its current utility to its initial approval and promulgation by successive Chiefs of Naval Operations in Washington and to its codification by their staffs (OPNAV). These include especially the successive Deputy Chiefs of Naval Operations for Plans, Policy and Operations (OP-06), Directors of the Strategy, Plans and Policy Division (OP-60), Heads of the Strategic Concepts Branch (OP-603), and staff officers in that branch. OPNAV is the one organization tasked to focus on maritime strategy, and to view it not only in a balanced global manner but also within the bounds of actual current national military planning parameters.

OPNAV's capabilities in this endeavor are due in part to the existence of the Navy Politico-Military/Strategic Planning subspecialty education, screening, and utilization system. This personnel system, while somewhat imperfect, has been identifying, training, and using naval officers in a network of strategists--in Washington, Newport, the Fleet, and elsewhere--for over a decade and a half.

Nevertheless, despite the clear postwar historical roots of the Maritime Strategy and its codification in and dissemination from Washington by some of the best minds in the national security affairs community today, a number of publications appeared in the last decade decrying a lack of strategic training and thinking in the Navy, past and present, and ignoring or misunderstanding the critical role in strategy development of naval officers in staff positions. This literature, as well as some counters to it, is briefly outlined below.

A. The Public Debate: Criticisms and Kudos

Brooks, Captain Linton F., "An Examination of Professional Concerns of Naval Officers as Reflected in their Professional Journal", Naval War College Review, Jan-Feb 1980, pp 46-56. (A future primary contributor to the development and articulation of the Maritime Strategy decries the paucity of articles on strategy in the Navy professional literature of the late 1960s. This era was admittedly dominated by Vietnam and an internal professional view of the navy as primarily an infinitely flexible limited war fire brigade, but it did, however, also see the publication of RADM J. C. Wylie's Military Strategy, RADM Henry Eccles's Military Concepts and Philosophy, and ADM Joseph J. Clark's coauthored Sea Power and its Meaning).

Buell, CDR Thomas B., USN (Ret.), "The Education of a Warrior", Proceedings, January 1981, pp 40-45. Also "Comment and Discussion": February 1981, p 21; March 1981, p 15; April 1981, pp 21-23; June 1981, pp 77-79; July 1981, pp 78-80; August 1981, pp 71-75; November 1981, pp 84-87; January 1982, p 76; March 1982, p 27; April 1982, p 20. (Posed the question: "Where will we get our future strategists?" Implied that the Navy had no real answer to the question, a view shared by most of the eight "commenters and discussants" chosen for publication by the Proceedings, only one of whom was familiar with actual Navy practice in this area. Illustrative of the limited public visibility of true U.S. Navy strategic thought before 1981-82).

Woolsey, R. James, "Mapping 'U.S. Defense Policy in the 1980's'", International Security, Fall 1981, pp 202-207. (By the 1977-1980 Under Secretary of the Navy. "The other side of the coin". A call to bring the "American academic intellectual establishment" and the military establishment more in touch with each other by focusing the efforts of the former on the actual "defense policy" problems of the latter, vice exclusively on "(a) the politico-military situation in the four corners of the globe and (b) nuclear and arms control theology"). For similar disconnects that have occurred even within the field of "nuclear theology" itself, see Rosenberg, David, "U.S. Nuclear Strategy: Theory vs. Practice", Bulletin of the Atomic Scientists, March 1987, pp 20+. ("Theorists and consultants have had little impact on the development of nuclear weapons policies. Rather, strategic planning should be seen as a governmental process, carried out largely by military officers and civilian bureaucrats").

Bruins, Berend D., "Should Naval Officers Be Strategists?", Proceedings, January 1982, pp 52-56. Also "Comment and Discussion": March 1982, p 27; April 1982, p 20; May 1982, p 17. (The Proceedings throws three more retirees and an active-duty non-strategist into the public fray. Meanwhile, fleet plans staffs, the Strategic Studies Group at Newport, and the one intelligence officer and nine line officers--six with PhDs--assigned to OP-603 were at the time actively laying the groundwork for the Maritime Strategy. Illustrative of the limited public visibility of actual naval strategic thinkers before 1982-83.).

Milsted, LCDR Charles E., Jr., "A Corps of Naval Strategists", Masters Degree Thesis, Naval Postgraduate School, June 1983. Based on the somewhat skewed open literature available during this period. As with Bruins, above, "strategy" and "long-range planning" not well differentiated. Proposed establishment of a network of specifically educated and trained naval strategists responsible for long-range planning. Following his own model, Milsted was subsequently assigned to OP-603 from 1983 to 1985, where he became a key contributor to the codification of the Maritime Strategy. He is especially hard on War College faculties, including the Naval War College: "None of the war college faculties is in the forefront of development in any of the military disciplines they teach." Actually, no group has been more in the "forefront of development" in the "discipline" of Maritime Strategy (SECNAV, the CNO, the OP-06 organization, and the Strategic Studies Group aside) than the Naval War College faculty, as is evidenced by their prominence in this bibliography. Crackel is a military historian by training with little apparent experience in actual strategy- or policy-making, and with an almost exclusively U.S. Army-oriented academic and operational record. Unlike most practicing U.S. naval strategists, he has apparently self-fulfilled his prophecy and "discovered that the think-tanks in and around Washington are a more congenial environment").

(A somewhat anachronistic characterization of the contemporary Navy as one with "too few thinkers", riven by acrimonious debates among factions of naval officers. "Rancorous disputes simmer among its 'big three unions'--the carrier, submarine, and surface-warfare admirals". Thus the seminal thinker and writer on naval strategy and bureaucratic politics of the 40s, 50s, and 60s sees no essential change in the Navy of the mid-80s, -- despite conscious Navy efforts to take his earlier counsel to heart in its development of a transcendent Maritime Strategy. B. The Public Record: OP-603

From 1982- to the present, the primary U.S. Navy organization charged with codifying, refining, and articulating the consensus in the Navy regarding the Maritime Strategy has been the OPNAV Strategic Concepts Group (OP-603). Organized by VADM William J. Crowe (then OP-06) and RADM Robert Hilton (then OP-60) in 1978, OP-603 evolved into an office of about a dozen post-graduate educated, trained, professional operator - strategists, including U.S. Army, Air Force, Marine Corps and Central Intelligence Agency officers.

Almost invisible to the general and national security affairs academic publics--especially when contrasted to the Secretary of the Navy, the Chief of Naval Operations, OP-06 and OP-60, the operational commanders, the Strategic Studies Group and the Naval War College--these officers have nevertheless been those principally responsible for the development of the Maritime Strategy as a unified, coherent, global framework and common U.S. and allied naval vision.

As with war planners, but unlike war college faculties, their output is largely classified. Nevertheless, they--and their superiors, OP-60 and OP-60B-- have often also achieved respectable open publication records. Typically, their writings prior to assignment to OP-60/603 reflect their diverse operational and academic interests and achievements; their publications during and after their assignment as strategists usually reflect their work on the Maritime Strategy. (For the latter, see the entries cited earlier in this bibliography by RADMs Hanks, Marryott, and Pendley; CAPTs Barnett, Brooks, Johnson, McGruther, and Swartz; CDRs Hickman, Kalb, and Milsted; and LCDRs Pocalyko and Stavridis. For the former, see the entries below. They represent, admittedly, only a portion of the record, limited only to the products of those officers who were specifically and principally assigned to codify the Maritime Strategy, generally the OP-603 "Branch Heads" and "Maritime Strategy Action Officers" serving from 1982 through 1986. They are provided only to illustrate the breadth of experience and depth of thought members of the U.S. Navy's current, functioning "Corps of Naval Strategists" bring with them when they report for duty).
