Current Research

Provably-secure programming languages and their type systems. I am currently involved in the [advanced type systems project](#). This project seeks to design advanced type systems for useful static program analyses. One objective is to design a provably-secure programming language and to identify the appropriate security properties.

Foundations for Secure Mobile Code Workshop

A workshop was held in Monterey in March 1997 to address foundations for secure mobile code. Submitted position statements can be found at the workshop's [web page](#).

Active Nets Security Architecture Forum

A record of discussions about various issues and proposed solutions related to security in active networks is being maintained [here](#).
