ACKNOWLEDGMENTS

We would like to thank Professor Ryan Sullivan and Professor Laura Armev for their direction throughout the entire thesis process. Your guidance and support enabled us to complete this enormous project with ease. You both have provided valuable insight and viewpoints we will be able to carry forward throughout our military careers. Additionally, we would like to thank all of the professors who have furthered our knowledge throughout the last eighteen months. Lastly, we want to thank Ms. Susan Hawthorne for your assistance and patience throughout the thesis processing process.

I would like to thank my wonderful wife, Veronica, and our three daughters, Ashley, Kaitlyn and Riley whose patience and backing over the last eighteen months allowed me to complete this project. Thank you for your understanding and support. Additionally, I would like to thank my thesis partners Al and Joel, whose hard work and dedication made this project enjoyable and a lot easier than it could have been.

-LT Eric Folkers

I would like to thank my wife, Emma, whose support through this degree program and thesis had no limits. Thanks to Eric and Al, I could not have joined a finer team to produce this thesis.

-LCDR Joel Frey

I would like to thank my supportive and loving wife, Melanie, my son, Elijah, and my daughters Aliyah and Mia. I greatly appreciate the contributions of Eric and Joel and their commitment throughout this endeavor. We put together the best possible team for this project.

-LCDR Al Francisco

I. INTRODUCTION

A. OVERVIEW

This thesis analyzes the accessibility of commissaries to eligible patrons and examines whether Walmart Supercenters would be an acceptable low-cost grocery store alternative. In the present fiscal environment, Congress is looking for ways to reduce spending and the Department of Defense (DOD) budget. Due to receiving over one billion dollars in annual appropriations, the commissary system has continually been considered in potential cost cutting initiatives (Bushatz, 2014).

One of the goals of the current administration is to reduce the deficit and in turn reduce the national debt (Dinan, 2014). The country must eliminate the deficit and begin to run a surplus, in order to reduce the federal debt. One way to achieve this is to identify programs that require appropriated funding and verify the necessity of expenditures. While the projected deficit for FY 2015 is down to \$564 billion, factoring in the federal debt has numerous people concerned and different options to reduce the debt and deficit are still being contemplated (Chantrill, 2014).

Since the creation of the Defense Commissary Agency (DeCA) in 1990, the cost of operations has been subsidized with appropriated funds (Bushatz, 2014). With appropriated funding levels reaching \$1.4 billion in FY 2013, the subsidy has again come under attack (Defense Commissary Agency, 2013). Earlier this year, while planning the FY 2014 and 2015 budgets, the Pentagon again took a closer look at the commissary appropriations and proposed to cut them by 71%, from the FY 2013 level down to \$400 million over a three-year period (Lunney, 2014). This reduction would most likely result in a number of commissary closures, higher prices and additional surcharges at the commissaries that stay in business.

Members of the House of Representatives and Senate responded in protest at the prospect of reducing appropriations (Bartel, 2014). The House Armed Services Committee reacted by tabling the cuts for the time being, but it appears to be only a matter of time until the subject is revisited (Jowers, 2014). While most military members

are likely not in favor of giving up the commissary benefit, Walmart's widespread availability and comparable prices make it a viable alternative.

B. POSSIBLE ALTERNATIVES

The Commissary system was originally created in order to provide a cost savings to eligible patrons. Although DeCA did not establish commissary locations in order to serve remote locations, the remoteness of military bases was a consideration when determining when and where to open new stores (Skirbunt, 2008). Because the grocery market has evolved since the initial commissaries were opened and the military has fewer remote locations, the primary reason to retain commissaries is therefore due to the cost savings for eligible patrons.

With numerous other options available including local supermarkets, specialty stores; big box stores such as Sam's Club and Costco and the creation of low cost options such as Walmart Supercenters, shoppers have more alternatives than ever. Should the cost savings be reduced or eliminated, patrons may frequent alternative stores, driving decreases in sales and potential closures as viable alternatives for service members. Policymakers should closely examine how suitable these alternatives are for CONUS-based service members before making any decisions.

This thesis will answer the following research questions:

- Why was the Commissary system created and what previous studies have been completed to determine if it should remain?
- Do commissary beneficiaries have access to a suitable alternative within a certain distance?
- What is the price difference if a patron purchases the exact or similar items at a commissary and a Walmart Supercenter?
- Can the price difference be further reduced or eliminated by purchasing generic alternatives?

C. AREA OF RESEARCH

Other studies, commissions and theses have focused on alternatives which have the potential to cost the United States Government more money in the long run than the

commissary subsidy. In order to examine the viability of a private alternative this thesis will examine all locations of continental United States (CONUS)-based commissaries, Walmart Supercenters, military bases and metropolitan areas to determine the relative convenience of these alternatives to current patrons. In addition, this thesis will use a local market basket study to quantify the actual cost savings in a specific geographic location.

This thesis demonstrates that concentrated populations of active duty and retired military personnel are subject to shorter commutes when shopping at Walmart Supercenters than military commissaries and that the average military base is closer to a Walmart than a military commissary. The average number of Walmart Supercenters exceeds the number of commissaries within specific distances from military bases. Based on the data we present, the government should reexamine the practicality of reallocating annual appropriations currently allocated to DeCA.

The thesis specifically analyzes CONUS-based locations because of limited data. Commissaries serve an additional purpose OCONUS because the availability of goods service members are accustomed to in the United States is limited overseas. Additional research would be necessary to identify suitable alternatives overseas.

D. APPROACH

Our approach to this thesis was to first determine a current topic that was being debated in the news. While Congress continues to scrutinize ways to implement budget constraints and potential cuts to military benefits, the commissary once again becomes a highly debated topic. The backlash that the budget proposal had received over the potential elimination of commissary benefits became very intriguing, leading us to select the commissary system as our thesis topic.

We then gathered background information and data on the Global Positioning System (GPS) coordinates of CONUS-based commissaries, Walmart Supercenters, military bases and metropolitan areas. Utilizing the ArcGIS software program, we were able to determine the availability of Walmart Supercenters compared to commissaries. Finally, a local case study market basket was utilized to determine the actual savings

realized by Fort Ord commissary shoppers versus the Marina, California, Walmart Supercenter in the geographic location serving military members stationed at the Naval Postgraduate School and Defense Language Institute in Monterey, California. This case study determined the actual cost savings to military members based on a 122-item market basket containing exact items (apples to apples) and a market basket containing Walmart's Great Value generic brand versus items at the commissary.

E. ORGANIZATION

This thesis is organized into six chapters. Chapter II provides a history of the commissary system and a brief history of Walmart Supercenters and discusses the opposition the commissary system has felt from different committees and commissions, including the Hook Commission, Strauss Commission, Harden Subcommittee, Hoover Commission, Bowers Commission, Grace Commission, and the Jones Commission. It then discusses the alternatives presented by previous theses and how they have failed to eliminate the need for appropriations. Finally, it discusses recent market basket studies conducted by DeCA.

Chapter III identifies our data sources and the programs used to analyze the data. Additionally, it discusses our rationale on why certain distances were chosen and our study's limitations.

Chapter IV analyzes location data for all CONUS-based commissaries, Walmart Supercenters, military bases and metropolitan areas and answers the question, do commissary beneficiaries have access to a suitable alternative within a certain distance?

Chapter V presents the local market basket price study. It determines the actual savings realized at the local commissary versus the Walmart Supercenter and answers the questions; what is the price difference if a patron purchases the exact or similar items at a commissary and a Walmart Supercenter and can the price difference be further reduced or eliminated by purchasing generic alternatives?

Chapter VI provides our overall summary and conclusion. Finally, it discusses our recommendations on how to further the research.

II. BACKGROUND

A. OVERVIEW

This chapter provides background information on the commissary system and a brief history of Walmart, which we consider as a substitute in the study. The intention is to shed light on how the commissary has evolved and illustrate the scrutiny it has received from the federal government over the years. We discuss commissions and studies aimed at eliminating the commissary system and we examine alternative approaches to the current system proposed in prior theses. We also examine commissary market basket studies that report to estimate savings service members receive at commissaries.

B. COMMISSARY HISTORY

Although very different from the concept we think of today, Congress extended the ration system and began the first commissaries on June 16, 1775. This ration system included a Commissary General of stores and provisions based on the British model that purchased subsistence for the Army (Skirbunt, 2008). Instead of authorizing members of the Army to procure goods at a local store as we do today, the Army gave each soldier a daily ration, which consisted of the following items (Skirbunt, 2008):

- 1 pint of milk
- 1 quart of spruce beer
- 1 pound of fresh beef, salt fish, or $\frac{3}{4}$ pound of pork
- 1 ounce of rice
- 6 $\frac{1}{2}$ ounces of dried peas
- Soap and candles

The Army continued to issue this ration of food for the next three years, until officers were offered wages of thirty-three cents per ration in place of the daily ration allowance (Skirbunt, 2008).

The next forty-seven years saw minor changes affecting who was authorized rations, how many rations were allowed and the contents of a daily ration (Skirbunt, 2008). The next major change came in 1825, when due to the expanding war, Army officers were granted the privilege to make purchases for their personal use, paying at-cost prices from commissary department storehouses at specified posts (History of U.S. Military Commissaries, 2014). The benefit was granted initially to officers based on the remoteness of the post and availability of goods, prior to being expanded sixteen years later to allow officers to purchase items for their immediate family members. In 1867, the benefit was expanded to the enlisted ranks and the commissary benefits and system we know today was born (History of U.S. Military Commissaries, 2014).

The Army established the commissary system during the Civil War out of necessity. The Army employed substandard contractors to procure daily rations and the soldiers needed higher quality subsistence than what contractors were providing (Skirbunt, 2008). Although the stores did not officially open to enlisted men until 1867, they were basically in place throughout the Civil War. The men, lacking the nourishment they needed or the items they desired, would turn to the settlers to procure substitute items (Skirbunt, 2008). While this practice was allowed and Congress published a list of authorized items, many settlers took advantage of the men by charging a premium (Skirbunt, 2008). Policymakers decided to give the enlisted men the same benefits the officers had enjoyed for the previous four decades, based on the premise of maintaining good prices, providing convenience to the customer and gradually forcing the settlers out of business (Skirbunt, 2008).

Opening commissary stores was only a temporary solution to the challenge of feeding troops. Stores offered fresh produce and other perishable items, but due to poor transportation and lack of refrigeration, food was prone to spoilage and men again turned to the settlers to supply subsistence (Skirbunt, 2008). A ten-percent surcharge was implemented in 1879 to help offset the cost of transportation and spoilage; however, the surcharge was short lived due to its unpopularity and was quickly repealed five years later (Skirbunt, 2008). Another key change was implemented in 1874, with the beginning

of the revolving fund, when profits were allowed to be reinvested back in the stores rather than being taken in by the U.S. Treasury (Skirbunt, 2008).

Over the next fifty years, the commissary system expanded further. The Navy, Marines and Air Force adopted the commissary system. More stores opened near different posts, and certain overseas locations established their first commissaries (Skirbunt, 2008). The period also expanded authorized users to include certain federal employees and retired military personnel (Skirbunt, 2008). The expansion required an increase in appropriated funding, which garnered criticism from the private sector over loss of potential customers. The commissary became a hotly debated topic.

The heated debate led to:

- Numerous studies verifying the amount of savings commissaries brought to the military customer.
- Subcommittees with the goal of making commissaries self-sustaining.
- The re-implementation of the surcharge to help offset costs.
- A number of commissions on how to improve the commissary system, including the Hook Commission, Strauss Commission, Harden Subcommittee, Hoover Commission, 1964 Government Accounting Office (GAO) report, Bowers Commission, Grace Commission and Jones Commission (Skirbunt, 2008).

The studies, surcharge and commissions will all be discussed in greater detail in the following paragraphs.

Over the past sixty years, spouses have become vocal in the commissary debate as the services have seen an increase in the number service members with families. This increase has further fueled the fire against eliminating the commissary benefit, as special interest groups relied more heavily on commissaries to stretch their buying power (Skirbunt, 2008). A number of studies have been completed and the common theme among them is that spouses value the benefit and are adamantly against its going away (Skirbunt, 2008).

In the early 1970s, commissaries became structured and began to increase surcharges. The DOD mandated basic ground rules and more centralization for the

services while Congress reaffirmed the surcharge at 3% in 1974, raised it to 4% in 1976 and again to 5% in 1983 (Skirbunt, 2008).

As the Cold War came to an end, an average of ten commissaries were closed per year due to the reduction of military personnel, resulting in a decrease in sales. The talk of consolidation became a popular debate and brought three major concerns from each of the services and the personnel who were employed by the commissaries including (Skirbunt, 2008): 1) The commissary budget would become one large target and be more prone to cuts, 2) the DOD would not fight for the benefit as the services had, 3) and the belief that each service believed their way of providing the benefit was the right way.

The Jones Commission was formed to look at alternatives and one of their recommendations was to consolidate the four services' commissary organizations into one organization that would have to answer to a board of directors made up of DOD and service officials (Office of the Assistant Secretary of Defense, Force Management & Personnel, 1989). On May 15, 1990, the DOD accepted the commission's advice and Deputy Secretary of Defense, Donald Atwood, announced that DeCA would be formed (Skirbunt, 2008). While the letter was signed and DeCA was provisionally established on October 1, 1990, the following year was anything but smooth because the new organization needed to appoint officers, issue directives, and form committees. DeCA was activated on October 1, 1991, as a single organization in charge of the military commissary system (Skirbunt, 2008).

Since its inception, DeCA has become one of the country's most powerful supermarket chains despite facing a number of changes. As a result of military realignments, base realignment, closures and ongoing budget cuts, DeCA closed nearly two hundred commissaries shrank its workforce from over 22,000 employees to nearly 8,000 employees (Skirbunt, 2008). DeCA faced further opposition when the Congressional Budget Office (CBO) claimed that commissaries had exceeded their original purpose of providing service to remote locations, however, DeCA presented evidence that shed light on their original purpose, finally putting an end to this incorrect notion (Skirbunt, 2008).

Because DeCA was supported by appropriated funds, the organization needed to be run more like a business. During the turn of the 21st century, DeCA assumed a more business-like approach, focusing on cutting operational costs and delivering savings to the customer. (Skirbunt, 2008). The approach seemed to have worked as annual sales topped \$5 billion and a USDA study determined that an average family of four was capable of saving 30% annually, which equates to \$2,400 (Skirbunt, 2008). While the commissary system has continued to flourish, it still remains under attack. Decision makers again discussed privatization until the events of September 11, 2001 led their scrutiny to be tabled for the time being, citing that the commissary was still a benefit that impacted morale (Skirbunt, 2008). A 2005 CBO report claimed \$2.4 billion could be saved over the next four years by closing all commissaries and giving active duty troops a five hundred dollar a year stipend (Skirbunt, 2008).

While the commissary was originally started to provide service to Army officers, eligibility has been extended over the years to numerous groups and individuals. The following individuals and groups are currently granted commissary privileges (DODI 1330.17, 2014):

- Members of the Uniformed Services
- Members of the Reserve components
- Cadets and midshipmen of the Armed Services Academies
- Noncommissioned ships officers and members of the crews of vessels of the National Oceanic and Atmospheric Administration (NOAA) and its predecessors.
- Retired Personnel
- Medal of Honor Recipients
- 100 Percent Disabled Veterans
- Authorized Family Members
- DOD Civilian Employees and authorized family members Stationed outside the United States and outside the U.S. Territories and Possessions
- Official DOD and Armed Forces Organizations and Activities

- Involuntarily Separated Uniformed Personnel

Additionally, the following groups and individuals may be granted access to make purchases from the commissary, under certain circumstances, except when prohibited by treaty or other international agreements in foreign countries (DODI 1330.17, 2014):

- Hospitalized Veterans
- DOD Civilian Employees Assigned to the U.S. Territories and Possessions
- Military Personnel of Foreign Nations
- Non-DOD U.S. Government Departments or Agencies in Overseas Areas
- Civilian Employees of Non-DOD U.S. Government Departments or Agencies outside the United States and outside the U.S. Territories and Possessions
- American National Red Cross (ARC) Personnel
- United Service Organizations (USO)
- United Seamen's Service (USS)
- Armed Services Young Men's Christian Association (ASYMCA)
- Personal Agent or Personal Representative
- DeCA Employee Commissary Privileges
- Federally Declared Disasters

C. BRIEF HISTORY OF WALMART

Walmart is a nationally available alternative and a dominant competitor in the grocery industry. Walmart Supercenter Stores provide numerous locations and easy accessibility throughout the lower 48 states, and its store brand "Great Value" products are frequently suitable substitutes to more expensive, name brand products.

Sam Walton founded Walmart on the premise that it would have the lowest prices anytime. The first store opened in Rogers, Arkansas, on July 2, 1962 (History Timeline, 2014). Over the next decade, the company experienced tremendous growth. Walmart officially incorporated in 1960, went public in 1970, opened its first distribution center in

1971, and was listed on the New York Stock Exchange by 1972 with \$78 million in sales and fifty-one stores (History Timeline, 2014). Walmart continued to see unparalleled growth in the 1980s, as the company opened two additional types of stores that are almost everywhere today, Sam's Clubs and Walmart Supercenters. Walmart Corporation reached over \$1 billion in sales faster than any other company (History Timeline, 2014).

While Walmart's mission was to provide customers with everyday low prices and outstanding customer service, the decision to expand to Walmart Supercenters was a key strategic move. Since the first Walmart Supercenter opened in 1988, in Washington, Missouri, Walmart Corporation has expanded to become the largest grocer in the nation and has continued to open Supercenters more than any other, with 3,336 of their 4,901 stores in the United States today being Walmart Supercenters (Walmart U.S., 2014). The goal behind the Supercenter brand was to offer the customer a one-stop shop for all of customers' home and basic needs.

Walmart made a key strategic move in 1993, creating the Great Value brand. Walmart founded the brand in order to provide a quality and low-priced generic brand that is an alternative to name brands (Goldman, 2012). The Great Value brand, which has over one hundred categories and dozens of suppliers became the largest brand in the U.S. in terms of both volume and sales (Goldman, 2012). We will look at this more closely in Chapter V, comparing commissary savings to potential savings by substituting the Great Value brand for certain name brand products.

Today, Walmart has risen to become a world power with stores popping up all over the place. It has eclipsed the \$400 billion mark in annual sales, recently celebrated fifty years in business and continue to expand internationally (History Timeline, 2014).

D. REVIEW OF COMMISSIONS, REPORTS AND THESES

The primary role of commissions, Government reports and student theses is to review and make recommendations to Commissary Executives and provide DOD Leadership with facts from findings on current policies and programs associated with the commissaries.

1. Hook Commission, 1947

The first commission, chaired by Ohio Industrialist, Charles R. Hook, although not specifically tasked to look at commissary benefits, was appointed by President Truman and the DOD in 1947 to study military compensation (Skirbunt, 2008). The commission took a comprehensive look at all military pay and compensation and looked at commissaries positively (Skirbunt, 2008). In their published report, Career Compensation for the Uniformed Services, the commission determined that when pay ranks were set, commissary benefits were taken into account and, therefore, pay would need to be increased to offset the loss of this benefit if the commissaries were taken away (Skirbunt, 2008).

2. Strauss Commission, 1952

A second commission, chaired by Lewis R. Strauss, was convened by Secretary of Defense Robert A. Lovett in 1952 to analyze special and incentive hazardous duty pays and make recommendations about the specific pays (Skirbunt, 2008). The Strauss Commission agreed one hundred percent with the Hook Commission's findings and recommended that Congress should think twice before any major changes are made to military pay and benefits (Skirbunt, 2008). However, due to a change in Presidential parties, both the Hook and Strauss Commissions conclusions were found to be insignificant and the benefits would continue to be a fiercely debated topic for the foreseeable future (Skirbunt, 2008).

3. Harden Subcommittee, 1953

As the debate continued, the Harden Subcommittee, led by Republican Cecil M. Harden of Indiana, was formed in 1953 and held hearings addressing the competition between private sector industry and government business like activities (Skirbunt, 2008). The National Supermarket Institute argued for closure of all CONUS-based commissaries, while the Defense Department argued that closing commissaries would be equivalent to a pay cut and would negatively affect morale (Skirbunt, 2008). While Congress was considering the arguments and seriously considering acting in favor of closing the commissaries, opposition from pro-military media and veterans' organizations

was again able to save the commissaries as Congress decided to defer the decision to the future (Skirbunt, 2008).

4. Hoover Commission, 1955

The decision to forgo the argument to close commissaries was short lived. The Hoover Commission, led by President Herbert Hoover, was formed to look at Organization of the Executive Branch of the government and the first report was produced in 1949 (Skirbunt, 2008). The Report on Business Enterprises again fueled the debate as it recommended the following actions be taken in regard to commissaries (Skirbunt, 2008):

- Commissary operations should be contracted out.
- Prices should be adjusted to cover all costs.
- Commissaries should only be located in areas where “adequate or reasonably convenient services are not available.”
- However, as had been done in the past, commissaries were once again spared as the DOD rejected all of the commission’s recommendations in January of 1956 (Skirbunt, 2008).

5. Government Accounting Office Report, 1964

The next major report questioning the need for commissaries was a 1964 report published by the GAO, titled Failure to Curtail Government Expense of Military Commissary Stores in Continental United States Where Adequate Commercial Facilities Are Available (Skirbunt, 2008). This report became highly controversial as it was based on the incorrect premise that commissaries were intended only for remote posts and failed to discuss the savings delivered to customers (Skirbunt, 2008). Additionally, the GAO failed to present the findings to the DOD, thus disallowing them the ability to comment or explain. However, as it was common in previous studies and commissions, it recognized the impact that eliminating commissaries would potentially have on military morale and end strength (Skirbunt, 2008).

6. Bowers Commission, 1975

The third commission to look at alternative ways of improving commissary operations was the Bowers Commission. Formed in 1975, this study group, under the Assistant Secretary of Defense, Manpower and Reserve Affairs (M&RA), was tasked with determining if any changes should be made to the commissary system in order to reduce costs, improve efficiency, and provide better service (Bowers, 1975). The study group was formed in response to a proposal from the Secretary of Defense, recommending commissaries no longer receive direct appropriated fund support (Bowers, 1975). As Bowers (1975) states, the group considered the following five alternatives:

retention of the current system on a reimbursable basis, creation of a service-wide commissary management organization to operate separate-service commissary stores, establishment of common management organizations for exchange and commissary operations for the respective military service, creation of one agency to operate all commissary stores within DOD, and operation of commissary stores under a GOCO (Government owned, contractor-operated) arrangement. (p. 1-2)

The study group, which was made up of representatives from different agencies and each of the four services, consisted of eighteen members and was chaired by Army Brigadier General Emmett W. Bowers, the Commander of the U.S. Army Troop Support Agency (Bowers, 1975). The study determined that the creation of one agency to operate all commissary stores within DOD would result in the lowest costs with comparable savings; however, the authors were unable to recommend this alternative due to a three- to five-year lead time required for implementation (Bowers, 1975). While the commission realized this resulted in higher costs, it recommended creation of a service-wide commissary management organization to operate separate-service commissary stores, for a number of reasons including lowest impact on personnel and patrons, the imposed time frame, and the fact that it bought each service additional time to determine the customer's perspective to the Secretary of Defense's recommendation of eliminating appropriated fund support (Bowers, 1975). Additionally, the commission's report listed the following recommendations (Bowers, 1975):

- Development of accounting and administrative data processing (ADP) systems, while focusing standardization to the extent feasible by utilizing on a joint-Service committee.
- Enable legislation to:
 - Eliminate the Army and Air Force requirement to sell items at invoice.
 - Allow funds from adjustments and surcharges to be invested.
 - Eliminate the portion of the Defense Appropriations Act which institutes prices, availability, and distance.
- Provide flexibility in use of part-time employees.
- Request the Civil Service Commission to deliver recruiting support for part-time employees.
- Develop programs to inform customers of operating and savings information.
- Separate the troop issue and resale utilities.
- Develop an effective training program.
- Reevaluate the feasibility of consolidating into a joint-service system based on an evaluation of operational costs and customer losses after an appropriate period of time.

7. Grace Commission, 1987

Although not specifically tasked with analyzing commissary operations, a second commission that had recommendations on commissary operations was the President's Private Sector Survey on Cost Control, also known as the Grace Commission. This commission, made up of hundreds of task members from private industry and chaired by Mr. J. Peter Grace, the Chairman and Chief Executive Officer of W.R. Grace & Company, was formed in 1983 by President Ronald Reagan (President's Private Sector Survey on Cost Control, 1984). As stated in the President's Private Sector Survey on Cost Control Report (1984), President Reagan tasked "to identify opportunities for increased efficiency and reduced costs achievable by executive action or legislation" (p. i-f).

Among the 2,478 recommendations of the Grace Commission with a potential savings of \$424 billion in three years and \$1.9 trillion by the year 2000, was the recommendation that commissaries should either be closed or privatized (President's Private Sector Survey on Cost Control, 1984). While the savings were not as substantial as above, the commission estimated that by closing the commissaries in the CONUS, \$973 million could be saved over three years while privatizing would lead to an estimated savings of \$2.447 billion (President's Private Sector Survey on Cost Control, 1984).

While the commission estimated the potential for savings, more questions arose as to what would be the actual savings. One of the areas cited were what the effect would be on retention and whether closing or privatizing commissaries may actually lead to lower retention and cause more costs in the form of bonuses, pay raises or additional benefits (The Recommendations of the President's Private Sector Survey on Cost Control, 1985). Due to the uncertainties, the recommendations were never adopted and the issue of how to reduce costs associated with commissary operations would be revisited a few years later by the Jones Commission.

8. Jones Commission, 1989

On March 2, 1989, a request was initiated by the U.S. House of Representatives Chairman of Morale, Welfare and Recreation (MWR) Subcommittee on Readiness, the Honorable Marvin Leath to Lieutenant General Donald W. Jones, Deputy Assistant Secretary of Defense (Military Manpower and Personnel Policy), requesting that military commissaries be thoroughly and comprehensively analyzed (Office of the Assistant Secretary of Defense [Force Management & Personnel], 1989). As a result of the request, the DOD Study of Military Commissaries, also known as the Jones Commission, was created by the Deputy Assistant Secretary of Defense (Resource Management and Support) David J. Berteau, on March 31, 1989 (Office of the Assistant Secretary of Defense [Force Management & Personnel], 1989). As stated in (Office of the Assistant Secretary of Defense [Force Management & Personnel], 1989), the purpose of the study "was to conduct an unrestrained baseline reassessment to be used to reduce the systems' dependence on appropriations and in the development of policies that will move the

commissary system forward in an orderly and consistent manner into the next century” (p. v).

The study was set up in two main groups, consisting of twenty five members including the steering group, whose main function was to provide executive direction. The study group conducted the main study with input from commissary field activities, various grocery industry corporations, industry trade groups, and commissary support activities (Office of the Assistant Secretary of Defense [Force Management & Personnel], 1989). The Jones Commission conducted the study between April and September 1989, and determined that all members of the military should be entitled to the same level of commissary service regardless of their branch of service; however, due to each service running its own organization, this was not reality (Office of the Assistant Secretary of Defense [Force Management & Personnel], 1989). The Jones Commission further found that many of the tasks being performed by the services commissaries were duplicated by other agencies, labor intensive and obsolete in the grocery industry (Office of the Assistant Secretary of Defense [Force Management & Personnel], 1989). Due to these facts, the commission came up with the following two alternatives and estimated annual savings: (Office of the Assistant Secretary of Defense [Force Management & Personnel], 1989).

- Consolidate the four services commissary organizations into one organization (\$93.3 million) who would have to answer to a board of directors made up of DOD and service officials.
- Remain as service organizations but focus on central distribution (\$44 million) by establishing joint distribution centers operated in different regions by a designated service.

9. Jeffery Dearing 1984 Thesis

While researching the feasibility of conducting our thesis on alternatives to the current commissary system, we came across three previous theses which students have completed in satisfaction of their master’s degrees. The first one, completed in September 1984 by Captain Jeffery Dearing, was titled “An Evaluation of the Perceived and Actual

Cost Comparisons of Commissaries: Fort Ord Case.” Despite being completed over thirty years ago, it relates to our thesis since a price comparison was used to determine the actual savings realized by Fort Ord Commissary patrons.

This thesis starts with a background of how the commissary system began and then gets into a detailed description of the Fort Ord Commissary operations. It then details the approach to the thesis. The first step undertaken was to randomly distribute a questionnaire to 248 military members, ranging from E-1 to O-5, stationed at Fort Ord, Naval Postgraduate School and Point Sur Naval Facility. The goal was to determine shopping habits and the perception of the Fort Ord Commissary and specifically obtain data related to disposable income, military status, biographical data, and distance from the commissary, perceived savings, time and loyalty (Dearing, 1984).

The second part of the thesis is very similar to what we have completed in the Chapter V case study, as shelf prices were compared at the Fort Ord Commissary, and three local supermarkets (Alpha-Beta, Lucky and Safeway), to determine the actual savings provided by the commissary (Dearing, 1984). From there, Captain Dearing created a cost model which took into account direct costs, indirect costs and random costs, utilizing commissary surcharges, bagger tips, purchase costs, transportation costs, total time per shopping trip, frequency of monthly trips, and hourly cost of shopping and was applied to the commissary and the average of the three supermarkets. (Dearing, 1984). Next a savings model was created which determined the direct cost savings of shopping at the commissary by subtracting the sum of the average cost of shopping at the supermarkets and the sum of the taxable and non-taxable costs from the direct cost of shopping at the commissary, then dividing the product by the average cost of shopping at the supermarkets, and finally multiplying the result by 100 (Dearing, 1984).

The price data was gathered on 157 items from the following categories Dearing, 1984):

- Produce
- Meat
- Dairy

- Frozen food
- Grocery products
- Household goods
- Health and beauty

The prices were gathered utilizing same name brand when available, same quality and unit quantity parameter when exact items were unavailable (Dearing, 1984). Utilizing the survey data, cost and savings models and price data, it was determined that the average savings provided by shopping at the commissary was \$44.96 and was further broken down to 22.75%, when taking into account all direct costs and 26.32% when utilizing shelf price only (Dearing, 1984).

Although this thesis determined that the commissary benefit provides an actual savings, there are some areas that should be taken into account. First, the survey was randomly distributed and then it was concluded that the data was characteristic of the overall local military population. Second, while the use of indirect costs is useful, it can influence the data based on what assumptions are used. Therefore, the most useful part of the study in relation to our thesis is the standard price comparison utilizing only the price data.

10. Martin Alcott 1994 Thesis

The second thesis, completed in December 1994 by Lieutenant Commander Martin Alcott, was titled “An Evaluation of Direct Cash Compensation in Lieu of Military Commissary Privileges.” Although it was completed nearly twenty years ago, it still remains relevant today, as many of the issues discussed in the thesis are still a subject of debate today.

The first research question discussed focuses on the history of the commissary and its intended purpose. This is primarily background information that brings the reader up to speed on how the commissary was originally started and what changes it has undergone since its inception. From there, the focus of the thesis shifts to the remaining three research questions which were “Do commissary beneficiaries have a legal right to

these benefits, what is the value of the commissary benefit, and can this benefit be provided more efficiently through direct cash compensation or other means?" (Alcott, 1994).

While looking at whether or not commissary beneficiaries have a legal right to these benefits, LCDR Alcott took the approach of determining whether beneficiaries were actually receiving an entitlement, or if instead they were receiving a fringe benefit or privilege. In researching this, he determined that if the benefit was indeed an entitlement, than those beneficiaries who were unable to receive the benefit should be entitled to an equivalent cash payment, and since this was not happening, it could not be considered an entitlement (Alcott, 1994). From there, he took it a step further and determined it could not be a fringe benefit since it was not guaranteed to all employees (Alcott, 1994). Eliminating the possibility of either an entitlement or a fringe benefit, led him to conclude commissary use was instead a privilege.

After determining whether or not beneficiaries have a legal right to the commissary benefit, the thesis shifts focus and attempts to quantify the value of the commissary benefit. This is first done by looking at it from an employer's point of view and determined to cost an average monthly value of \$66.67 per member, based on FY 1995 appropriated funding and authorized active duty force end strength (Alcott, 1994). From there, a more complicated approach was used to look at the value from the employee's point of view based on actual usage. In order to do this, multiple assumptions were taken into account, such as when personnel promote, years of service, family size and spending patterns. The value was calculated by looking at average savings by pay grade and multiplying this number by the average monthly gross incomes to determine actual savings (Alcott, 1994). This method led to the discovery that savings were not equal across the board and therefore if direct cash payments were utilized rather than the commissary benefit, E-1 to E-7, W-1, and O-1 to O-2 would be compensated above their monthly savings while the remaining ranks would not (Alcott, 1994).

Finally, the manner to implementing direct cash payments were looked at to determine if this indeed was a feasible option. The option looked at adding the cash payment directly to BAS. Because some enlisted personnel receive subsisted in-kind

meals, more calculations were needed to determine the actual cost to the government when taking this approach. Subsistence-in-kind is meals furnished by or on behalf of the Government at no charge when BAS is not payable to enlisted personnel (DOD FMR, Vol 7A, Ch 25, 2014). The savings per pay grade were used along with projected FY95 manning levels to determine the monthly costs per pay grade. The enlisted cost was reduced by the percentage of personnel receiving subsistence in-kind which was calculated by determining the average marital rate and the percentage of single personnel receiving BAS. The findings led to an estimated \$486 million cost compared to appropriated funds of \$576 million, resulting in a savings of approximately \$90 million and should therefore be implemented (Alcott, 1994).

Although this thesis determines that the commissary benefit is a privilege and places a value on the benefit, determining that it would be feasible and cost effective to implement direct cash compensation in lieu of commissary benefits, there are some areas that should be taken into account. First, it looks primarily at the active duty force and does not take into account if anything would be offered to the many other eligible commissary patrons. Second, while it briefly discusses the option of privatization, it does not get into what would be done with the existing commissaries. Finally, informal interviews were used with four individuals, consisting of a retired Navy Rear Admiral, an Army Captain, A Navy Lieutenant, and a Navy Lieutenant Commander's spouse to determine the value beneficiaries place on their commissary benefits and it was concluded that this sample was representative of the population. The problems with this were the small sample size and lack of diversity.

11. Christopher R. deWilde 1998 Thesis

The final thesis completed in 1998 by Lieutenant Christopher R. deWilde was titled Evaluation of Directly Subsidizing Commercial Supermarket Discounts as an Alternative to Providing CONUS Commissaries. The thesis was completed a year after the Congressional Budget Office study and highlights many issues still under scrutiny today. At the time, the CBO focused on the following four alternatives (deWilde, 1998):

- Follow DOD's current plan.

- Create a DOD resale authority.
- Rely on private contractors.
- Revise incentives for DOD's retail activities.

The focus of the thesis was to evaluate the feasibility providing discounts to eligible service-members by contracting with commercial supermarkets to provide discounts. In order to accomplish this, LT deWilde looked first at the history of the commissary system and then shifted focus to the commercial supermarket industry and the differences in how it operates. From there, the focus shifts to a pilot program conducted near Naval Station Pascagoula, Mississippi, in which two grocery stores in Pascagoula were willing to offer five and six percent discounts to service members, while receiving no subsidies, since the closest commissary was 30 miles away.

The thesis then discussed the cost to the government to provide subsidies to commercial supermarkets willing to enter into this program. For this section, LT deWilde discusses a selective subsidization approach in which the government would have to provide some subsidy to incentivize supermarkets to offer a substantial discount, that only certain products would be offered the discount based on items on the commissary authorized list, and that some annual cap on how much a service member was authorized to save (deWilde, 1998). A cost benefit analysis was conducted and it was determined that the CONUS commissaries accounted for approximately 66% of the total cost of the \$1 billion annual appropriation or \$660 million (deWilde, 1998). Based on the CBO study, it was estimated that thirty four percent of commissary sales were traceable to active duty personnel, which when taken into account with the \$660 million CONUS costs, equates to \$225 million (deWilde, 1998). Again using the CBO study as a reference, it was determined that approximately 1.15 million of the 1.4 million active duty service members were stationed in CONUS, \$4.3 billion dollars in sales was traceable to CONUS which when taken into account with the thirty four percent estimate above, equates to \$1.46 billion, therefore resulting in annual expenditures of \$1,270 per service member or \$106 per month (deWilde, 1998). Next, the \$1,270 was adjusted to reflect commissary savings (20%), amount of purchases already made at commercial

supermarkets (40%) and an adjusted monthly total of \$220 was determined (deWilde, 1998). Finally, the \$220 was used along with estimating the government subsidize ten or twenty percent and it was determined it will cost \$304 million or \$608.5 million depending on which option is adopted (deWilde, 1998). The research was taken one step further and it was determined it would only be cost effective for the government to subsidize approximately five percent to all eligible patrons while nine percent would retain the same benefits for active duty personnel based on USDA and Bureau of Labor Statistics (deWilde, 1998).

Although the thesis provides good detail and different alternatives, the following must be weighed when analyzing the options. First, the pilot program discussed in Pascagoula is presented as a viable option, but no data was available at the time of the study and it fails to answer the question of how many commercial supermarkets would be willing to offer the alternative. Second most of the data and research was aimed at how to replace the commissary benefit only for active duty personnel while failing to account for the other 66% of eligible personnel. In conclusion, the recommendation was to look further at reducing or eliminating CONUS commissaries to allow the DOD to concentrate on its primary mission and reduce the budget.

E. MARKET BASKET STUDIES

Since the consolidation of the services commissaries systems under one organization run by DeCA, a number of market basket studies have been conducted with similar outcomes. DeCA designed a survey to compare prices between commissaries and supermarkets, utilizing universal product codes for most items with the exception of fruits, vegetables and meats (Brink, 2001). The survey was conducted using random sampling techniques (Brink, 2001). The results estimate a steady increase in commissary comparative savings from 23.2% in 1991, to 27% in 1999 and 29.2% in 2001 (Brink, 2001).

The most recent study completed by DeCA in 2013 has been expanded to include all outlets and determined the commissary would save average service members 30.5% (Robinson, 2014). DeCA used the following methodology to arrive at the 30.5% savings

(Information Paper on 2013 Price Comparison Survey, 2013): A comprehensive database (Nielsen) of actual prices for scannable items was compared. Exact items were compared by using Universal Product Codes (UPC). Twenty-six weeks of price data were used, with an ending period of June 22, 2013. All Outlets Combined Database (AOC) was used which encompasses supermarkets, drug stores, mass stores, cooperating club stores and dollar stores. Finally, fruits, vegetables and meat are compared using random sampling at select stores.

When taking into account sales tax and surcharges, the savings estimates are 26.9% in CONUS and 28.1% when factoring in Alaska and Hawaii, and 22.3% when meat and produce are taken out of the equation (Information Paper on 2013 Price Comparison Survey, 2013). Looking more closely, the greatest savings are realized overseas (43.4%), which, when combined with the CONUS savings, leads to the 30.5% overall savings (Information Paper on 2013 Price Comparison Survey, 2013).

In brainstorming our goals for this thesis, we originally wanted to replicate a cost savings between CONUS-based commissaries and Walmart Supercenters; however, the data required to accomplish and replicate the study was not readily available through the Freedom of Information Act. However, Chapter V does include a case study comparing price data at the local commissary against price data at the closest Walmart Supercenter.

F. SUMMARY

This chapter has provided a history of the commissary system and a brief history of Walmart Supercenters. We will compare these stores in distance and price later in the study. It has also discussed the opposition the commissary system has faced from different committees and commissions. Finally, it discussed recent market basket studies conducted by DeCA. While the commissary has undergone a number of changes, the one thing that has remained constant is the concept of benefiting military personnel of all ranks by providing healthful foods, at cost. Despite this concept, the commissary has again become a highly debated topic today. The main controversy stems from the annual subsidies DeCA receives to keep the commissary in business, which amount to billions of dollars of appropriated funds. Critics question whether these billions of dollars of

subsidies can be better spent in other DOD programs or saved in order to decrease unnecessary government outlays. More than ever, alternative options exist to provide military customers with low-cost groceries. In fact, options like Walmart may be more accessible to military personnel than commissaries throughout CONUS.

THIS PAGE INTENTIONALLY LEFT BLANK

III. RESEARCH METHODOLOGY

A. OVERVIEW

Commissary patrons claim that the most important reason why they shopped at commercial supermarkets outside of the commissary is because alternative stores were in closer proximity to their homes (Riddle, 1994). If commissary patrons consider the value of distance in their choice for supermarkets, Walmart Supercenters can be used as a comparison to commissaries because of their substantial footprint in the United States. From 1962 to present day, Walmart has emerged as the premier grocer in the United States. Walmart's first fully stocked grocery store originated in 1988, and the number of Walmart stores had grown to 3,336 Walmart Supercenters in the Continental United States (CONUS) by 2014. CONUS is defined in Joint Publication 1-02 as the 48 states between Canada and Mexico, not including Hawaii and Alaska (JP 1-02, 2010). In 2010, Walmart outsold every competitor on supermarket items, reporting \$188.3 billion of sales, followed by Kroger's \$76.2 billion and Safeway's \$41 billion, resulting in \$122 billion more sales than the closest supermarket competitor (Lepore, 2014). Each week, nearly one-third of the U.S. population visits Walmart stores (Sehgal, 2011). Military customers are part of the growing customer base of Walmart patrons. Even at military bases located in the most remote areas of the country, Walmarts are often conveniently located nearby and remain a major alternative to supplying grocery products.

B. AVAILABILITY AND ACCESSIBILITY

Do commissary beneficiaries have access to a suitable alternative within a certain distance? In order to better understand the availability and accessibility of Walmart Supercenters and commissaries to potential shoppers, we measured distances of Walmart Supercenters and commissaries to military bases throughout CONUS. Additionally, we tallied the number of Walmart Supercenters and commissary stores within a 25-mile, 50-mile, and 100-mile radius of military bases and major metropolitan areas in CONUS. We also looked at the population of retired veterans and active duty personnel per state. We

used this data to generate a table of ratios of retired and active duty personnel to Walmart Supercenters and commissaries.

C. METHOD OF DATA COLLECTION

The study used latitude and longitude coordinates for commissaries, Walmart Supercenters and military bases, which we obtained from www.poi-factory.com (2014). We verified coordinates with actual locations published on walmart.com, DeCA website (commisarries.com), and official DOD websites. Google Maps validated the street addresses that were associated with the coordinates. We used the Census Population and Housing Tables (2010) to identify major metropolitan areas and retrieved their respective coordinates from <http://citylatitudelongitude.com> (City Coordinates, 2014). The FY 2011 DOD Statistical Report on the Military Retirement System provided the population of military retirees. Finally, we used the Statistical Abstract Table 520 Veterans by Selected Period of Service and State: 2010 to retrieve data on veterans per state (2012).

This study uses mapping and spatial analysis conducted with Esri's ArcGIS software suite. ArcMap is the main application inside ArcGIS and we used it to accurately map study locations and measure distances between study locations. For the study, a base layer map of the 48 continuous states pictured in Figure 1 was opened using ArcMap. The base layer map only shows state boundaries and all other layers were added separately.

Figure 1. Screen shot of 48 contiguous states with zero additional layers
(from ArcGIS; Source for map layer, U.S. Census)

We uploaded all coordinates into ArcMap to create separate layers for bases, commissaries, Walmart Supercenters and major metropolitan areas. We assigned color icons for reference. Figure 2 shows the base layer with the commissaries layer. Green represents commissary locations. Figure 3 represents the base layer with the major metropolitan areas layer. Blue represents major metropolitan areas. Figure 4 shows the base layer with the Walmart Supercenter layer. Maroon represents Walmart Supercenter locations. Figure 5 represents the base layer with the military bases layer. Black represents base locations.

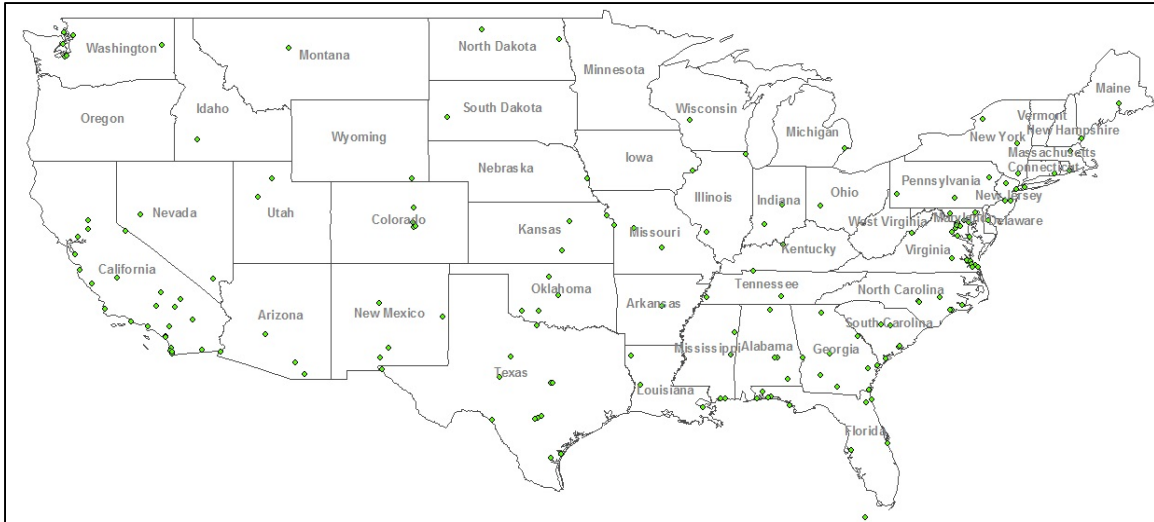

Figure 2. Commissaries throughout CONUS (from ArcGIS;
Source for base layer, poi-factory.com)

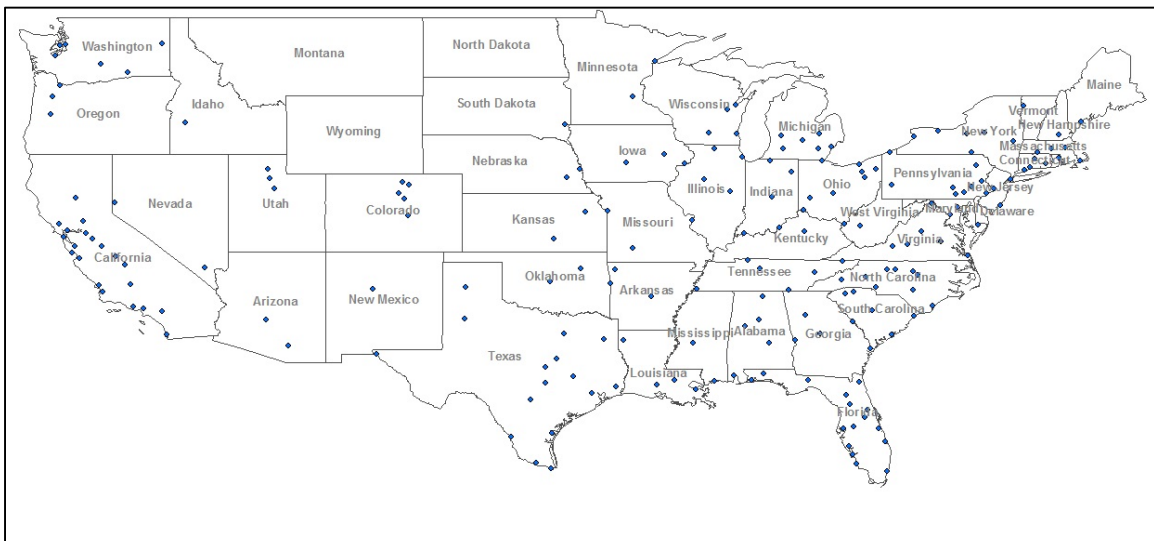

Figure 3. Major Metropolitan Areas throughout CONUS (from ArcGIS;
Source for base layer, poi-factory.com)

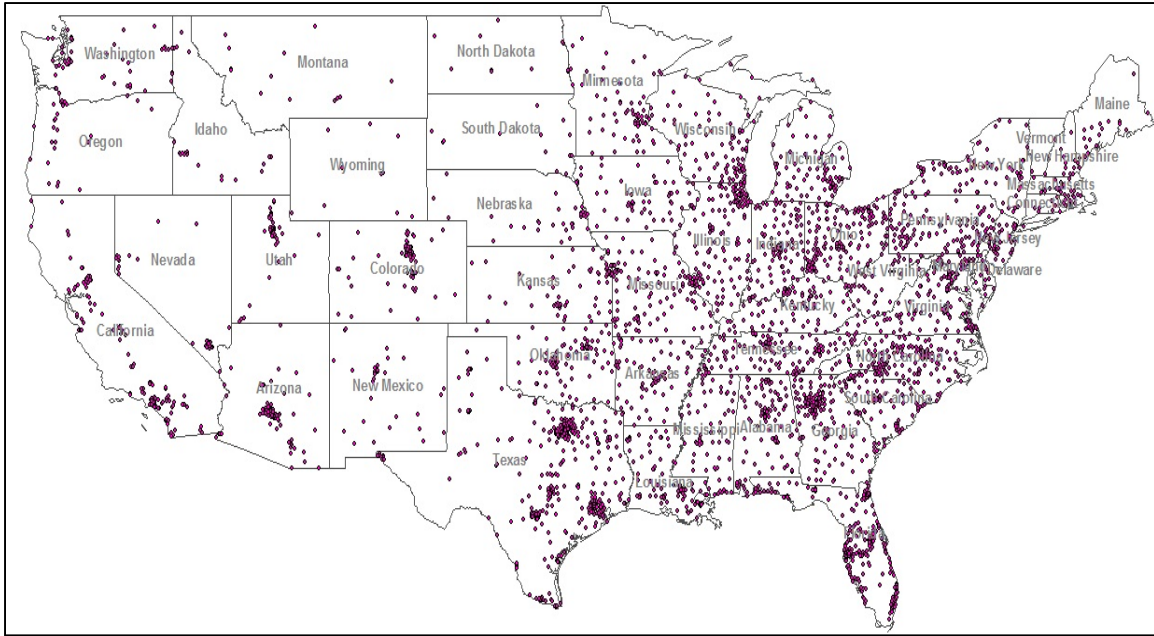

Figure 4. Walmart Supercenters throughout CONUS (from ArcGIS; Source for base layer, poi-factory.com)

Figure 5. Military bases throughout CONUS (from ArcGIS; Source for base layer, poi-factory.com)

In addition to the main variables, we also created base and major metropolitan layers. We used 25, 50 and 100 mile buffer zones for each base and major metropolitan area with their respective layer. The buffer zones highlight the number of commissaries

and Walmart Supercenters within the radius of the base or major metropolitan area, which allowed us to quantify the variables within specific distance of the radius. Figure 6 shows all layers over the base layer and the visual challenge to identify different objects needed for the study. The ability to add and remove layers in conjunction with the zoom function was a critical element in the measure and tally process. Figure 7 shows a zoomed in picture of the Monterey Peninsula with the bases, commissaries, Walmart Supercenters and 25 mile buffer for bases.

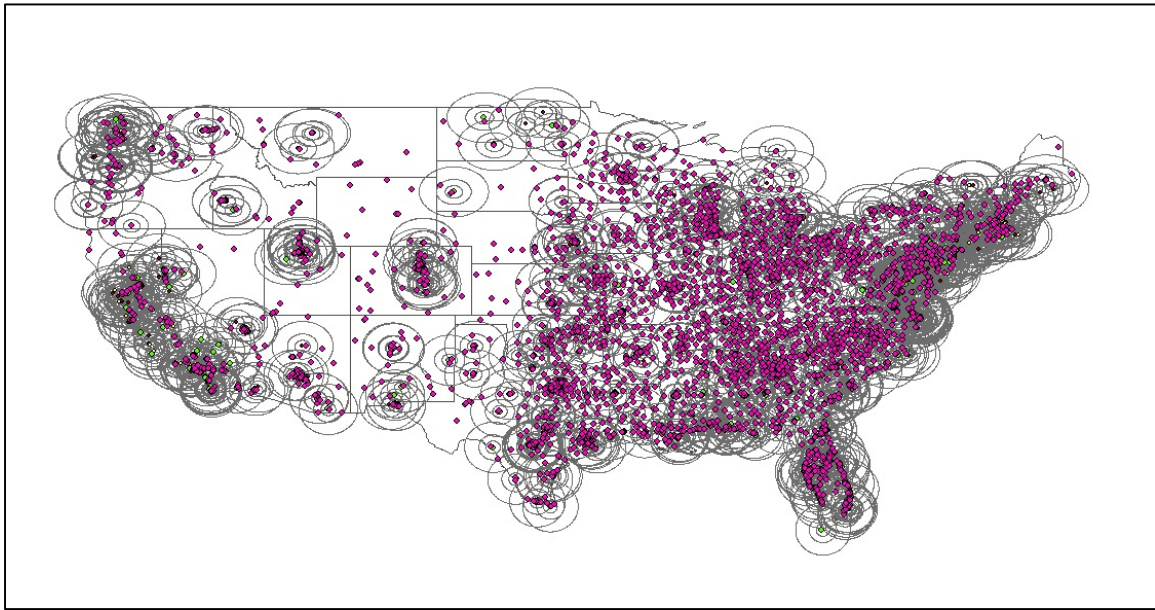

Figure 6. All the Layers (from ArcGIS; Source for base layers, poi-factory.com and citylatitude/longitude.com)

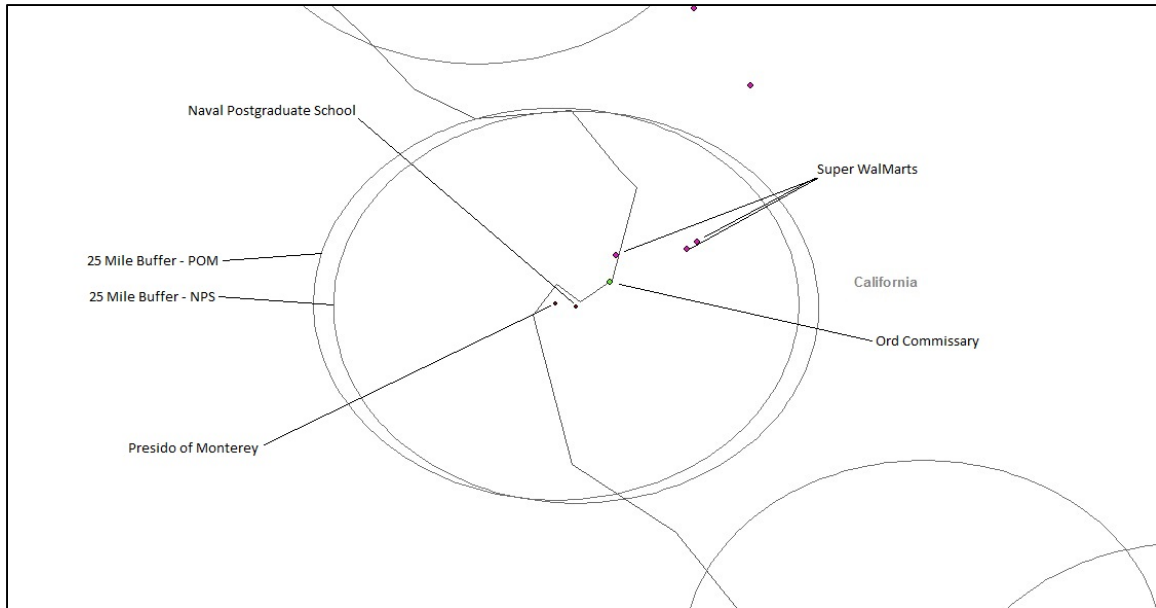

Figure 7. Bases, Walmart Supercenters and Commissary inside two 25 mile buffer for bases (from ArcGIS; Source for base layer, poi-factory.com)

The distances of Walmart Supercenters and commissaries from military bases was measured in ArcMap using the Measurement Tool, which allows the user to measure distances between different locations and multiple layers. Figure 8 shows the process to measure the distance from Fort Carson to the closest commissary. This process was repeated to measure the closest commissary and Walmart Supercenter for each base and major metropolitan area CONUS.

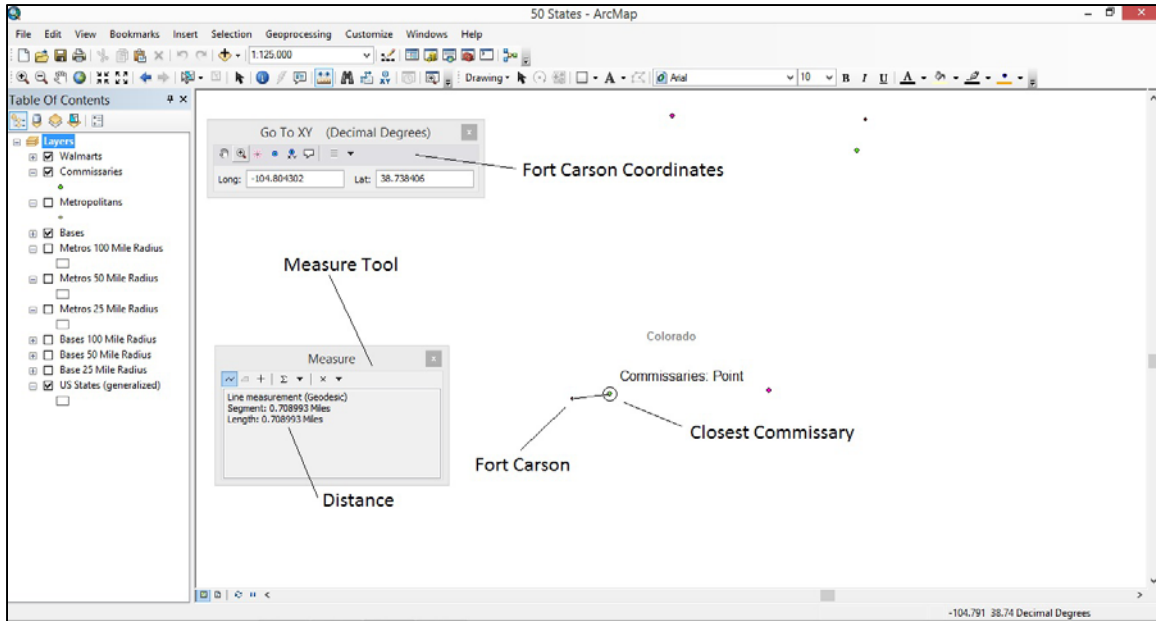

Figure 8. Measurement Tool Feature (from ArcGIS; Source for base layer, poi-factory.com)

Twenty-five-mile, 50-mile, and 100-mile buffer zones encompassed each military base and metropolitan area. The number of Walmart Supercenters and commissaries were tallied within each buffer zone. From ArcGIS, valuable data was extrapolated, allowing analyses of stores' accessibility to the customer. Figure 9 is an example of 37 Walmart Supercenters located inside Miami's 100 mile buffer zone.

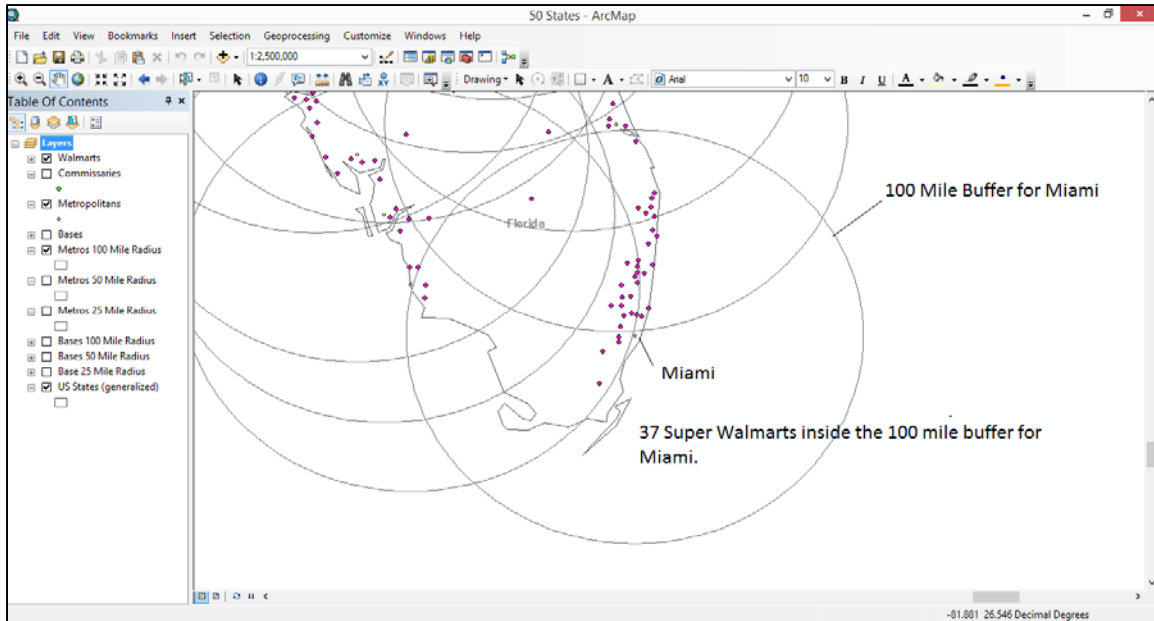

Figure 9. Counting locations inside a buffer zone (from ArcGIS; Source for base layers, poi-factory.com and citylatitudelongitude.com)

Every distance was recorded in a Microsoft Excel File and further calculated to find the average, standard deviation, minimum and maximum distances for all major metropolitans to closest commissaries and bases. The same method was used for bases. Every buffer zone count was also recorded in the excel file and the data was utilized to create ratios measuring commissaries to Walmart Supercenters in each buffer zone. We laid out the data from the buffer zone counts to show how many Walmart Supercenters there are to each commissary within 25, 50 and 100 mile radii.

D. DECA PRICE SURVEY

DeCA recently completed a price survey that found the commissary to deliver savings at 30.5 percent. This year's [2014] 30.5 percent savings figure comes from DeCA's ability now to access Nielsen's 'all outlets combined' database, which allows the agency to compare its prices to more retailers—discount department stores, club stores, drug stores and dollar stores—that also sell grocery items” (Commissaries.com, 2014). A request was submitted for a copy of the DeCA price comparison survey underlying data via the Freedom of Information Act (FOIA). The FOIA request was denied, and the underlying data was not made available by DeCA representatives, citing that it is in the

best interest of the DOD to limit release of information to the public. Without the underlying data, a local price comparison was conducted between Walmart Supercenter in Marina, California, and the Fort Ord Commissary. A list of 122 commonly purchased grocery items was used to build a standard market basket. The market basket was comprised of grocery items identified on the 2013 Consumer Price Index (CPI) consisting of cereal, bread, bakery goods, beef, poultry, seafood, eggs, dairy, fruits, vegetables, canned goods, and other grocery items (Crawford & Church, 2013).

E. LOCAL PRICE COMPARISON STUDY

We created our own price basket data for the case study because DeCA publicizes a percentage of savings it provides to customers that we intended to recreate and validate. However, DeCA does not make the study available to the public or for academic research. Our local study is an unbiased and objective approach to comparing prices between two organizations that we do not have any professional affiliation. We do not favor a specific outcome, and will represent the data impartially.

Although commissaries only use brand name products, comparable items at the Marina Walmart Supercenter were deemed to be acceptable comparisons as long as the product's weight, quality, type, and likeness were similar or identical. The price basket data was manually generated from same day site visits to the Ord Commissary and the Walmart Supercenter located in Marina California. DeCA did not provide items for a price basket, so the study created its own non-brand name grocery list built from www.mygrocerychecklist.com (2001). Examples of the non-brand name items generated from the grocery list website are canned green beans, bottled maple syrup and fresh beef of the eye round roast. Once the grocery list was created, the list was scrubbed against Walmart Supercenter Great Value Brand items and brand name items sold in Walmart Supercenter located in Marina, California, and the Ord Commissary. The strongest effort was made to utilize the same name brands between Walmart Supercenter and the commissary. Not all items could be equally matched by brand name and quantity sold; the work around is to measure price per unit, for example a 10-ounce can of corn that costs \$1.00 is actually \$0.10 per ounce. Additionally, not all items, such as fresh meat

and fresh vegetables are supported by the Great Value Brand. These items will be solely compared between the two stores. Chapter V will detail the findings and the actual commissary savings percentage of price per unit against Walmart Supercenter's name brand items and Great Value Brand.

THIS PAGE INTENTIONALLY LEFT BLANK

IV. LOCATION DATA AND ANALYSIS

A. WALMART SUPERCENTER AND COMMISSARY SITE SELECTION

Walmart's early expansion strategy aimed to curtail distribution costs by maintaining a dense network of store locations (Holmes, 2011). During the decision process of opening a new store, Walmart employs a very efficient site selection process focusing on the proximity to distribution channels. Walmart's growth pattern is likened to a flower blooming outward from the first store opening in Rogers, Arkansas, with a steady growth in all directions (Fettig 2006). By locating stores in close proximity to each other and expanding locally, Walmart Corporation is able to cut distribution costs and lower operating expenses, which allowed Walmart to price products lower than competitors. Holmes assessed that if Walmart retail outlets are located one mile closer to a distribution center, each retail outlet can save \$2,180 to \$4,000 per year in distribution costs (2011). Their distribution model allowed Walmart to expand and grow to be the nation's number one retailer. This chapter will demonstrate that there is rarely a place within CONUS that is not just a short drive away from the nearest Supercenter.

In contrast, DeCA serves its customer base best if it locates next to large bases where numerous military personnel are stationed. The location of a commissary shall have "a military mission and active duty population to justify the income benefit provided by a commissary as an integral element of the pay and benefits package for active duty Service members (DODI 1330.17, 2014). The most recent monthly data from the Defense Data Manpower Center (DMDC)...must validate that at least 500 Active, Reserve, and Guard personnel on active duty are permanently assigned to the installation or location" (DODI 1330.17, 2014). Figure 10 shows the map of commissaries located within CONUS, the network of store locations are by and large spread apart. Which strategic site-selection model provides more access to the customer? This chapter will empirically measure how accessible both Walmart Supercenters and commissaries are to military customers and other eligible commissary patrons.

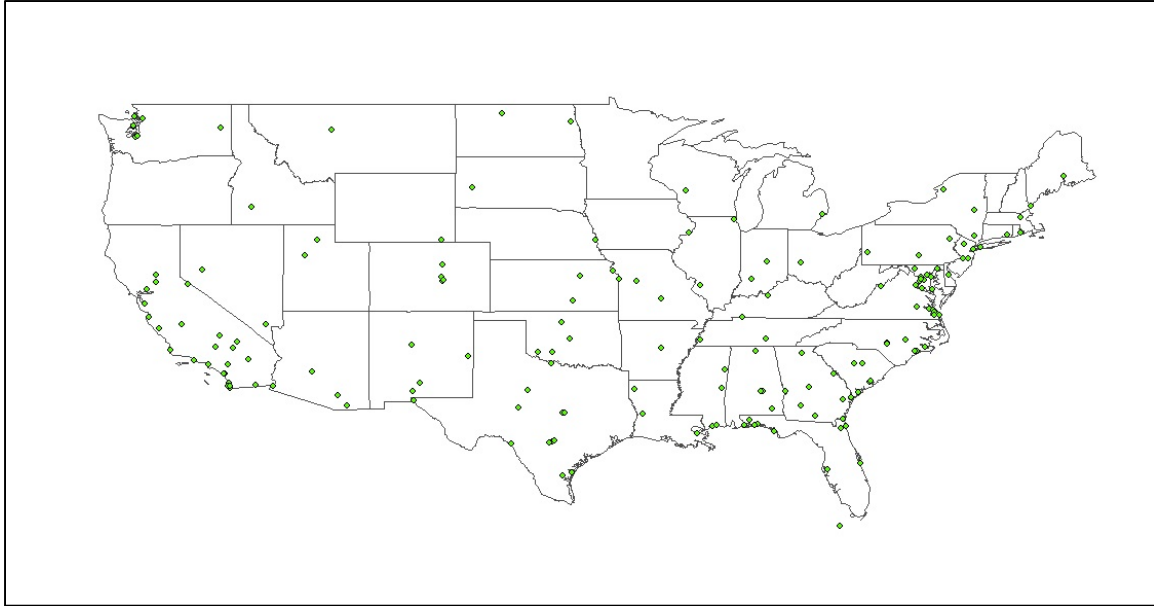

Figure 10. Mapped Commissaries in CONUS

B. OVERVIEW

This chapter presents data collected using spatial and mapping programs to measure the distances from two locations of interests: military bases and major metropolitan areas (population centers) throughout CONUS. From these central locations, the distance to the closest commissary and closest Walmart Supercenter was quantified. Additionally, the number of Walmart Supercenters and commissary stores were tallied within a 25-mile, 50-mile, and 100-mile radius of military bases and major metropolitan areas in CONUS. From this data, we can address these principal questions:

C. HOW ACCESSIBLE ARE COMMISSARIES IN MAJOR METROPOLITAN AREAS?

- How many metropolitan areas and military bases have zero Walmart Supercenters or zero commissaries within a 25 mile radius?
- Of these central locations, what is the average distance to the nearest Walmart Supercenter and commissary?
- What is the average distance between a major metropolitan area and the nearest Walmart Supercenter?
- How does that compare to the average distance to the nearest commissary?

D. HOW ACCESSIBLE ARE COMMISSARIES FROM CONUS MILITARY BASES?

- What is the average distance between a military base and the nearest Walmart Supercenter?
- How does that compare to the average distance to the nearest commissary?
- What is the average number of Walmart Supercenters and commissaries within a 25, 50, and 100-mile radius of a military base and metropolitan area?
- How many retired veterans and active duty personnel reside in each state?
- How many Walmart Supercenters and commissaries reside in each state?
- Within a given state, how do the number of retired and active duty personnel compare to the number of Walmart Supercenters and commissaries?

E. PROXIMITY TO A WALMART SUPERCENTER MATTERS

Research suggests that a newly constructed Supercenter has a negative impact on competing grocery stores in the area.

The biggest shakeup in the supermarket industry in the last two decades is due to growing competition from ‘superstores’: general merchandise stores which have added a full line of groceries. Between 1997 and 2002, sales of grocery products in traditional grocery stores fell by approximately 2% in real terms, while sales of grocery products in ‘general merchandise’ stores, which include Wal-Mart, grew by 48% in real terms. (Basker & Noel, 2007, p. 3)

When a Walmart Supercenter opens next to or near a commissary, one can assume that the commissary’s ability to maintain regular sales volumes will be challenged.

F. POPULATION CENTERS: WHERE THERE ARE NO COMMISSARIES, THERE ARE USUALLY MANY WALMART SUPERCENTERS

The DeCA mission statement is to “Deliver a vital benefit of the military pay system that sells grocery items at cost while enhancing quality of life and readiness” (DeCA Mission Statement, 2014). If one of the main purposes of a commissary is to provide a benefit to active duty personnel stationed at one of the 407 bases listed on

Appendix B, Walmart Supercenters are providing service members and their families with closer access to grocery items than commissaries, based on the data presented in this study.

- We located and mapped 3,254 Walmart Supercenter locations in CONUS. In comparison, there are only 183 commissary stores in all of CONUS. (Actual number of Walmart Supercenters and commissaries may differ as of 2014)
- Walmart Supercenters outnumber commissaries by a ratio of nearly 18 to 1
- Metropolitan Areas (Appendix A)
- Chicago-Naperville-Elgin, IL-IN-WI, Population 9,461,105
- There are zero commissaries located within 25 miles of this major metropolitan area. The nearest commissary is 33.89 miles.
- There are 22 Walmart Supercenters within 25 miles and the nearest Supercenter is 5.82 miles
- Dallas-Fort Worth-Arlington, TX, Population 6,426,214
- There are zero commissaries located within 25 miles of this major metropolitan area. The nearest commissary is 127.14 miles.
- There are 45 Walmart Supercenters within 25 miles and the nearest Supercenter is 4.84 miles
- Philadelphia-Camden-Wilmington, PA-NJ-DE-MD, Population 5,965,343
- There are zero commissaries located within 25 miles of this major metropolitan area. The nearest commissary is 127.14 miles.
- There are 15 Walmart Supercenter within 25 miles and the nearest Supercenter is 2.81 miles
- Houston-The Woodlands-Sugar Land, TX, Population 5,920,416
- There are zero commissaries located within 25 miles of this major metropolitan area. The nearest commissary is 156.73 miles.
- There are 41 Walmart Supercenters within 25 miles and the nearest Walmart is 1.26 miles

- According to Appendix A, there are 132 major metropolitan areas that have no commissaries within a 25 mile radius of its center. In comparison, there are only five metropolitan areas that do not have a Walmart Supercenter within 25 miles of its center. Taken in aggregate, there are potentially numerous commissary eligible patrons residing in highly populated areas that do not have access to a commissary.

G. PROXIMITY OF SUPERCENTERS AND COMMISSARIES TO POPULATION CENTERS

- The average distance of the closest commissary to a major metropolitan area is 55.97 miles, while the average distance of the closest Supercenter to a major metropolitan area is 5.96 miles (Table 1).
- There are an average of 8.28 Walmart Supercenters within 25 miles of a metropolitan area and only 1.16 commissaries within 25 miles of a metropolitan area (Table 1).
- Within a 50 mile buffer of every metropolitan area there are an average of 17.91 Walmart Supercenters, compared to only .96 commissaries (Table 1).
- Within a 100 mile buffer of every metropolitan area there are an average of 52.77 Walmart Supercenters, compared to only 2.87 commissaries (Table 1).

Table 1. Metropolitan Areas and Proximity to Walmart Supercenters and Commissaries

	Closest Walmart Supercenter	Closest Commissary	# of Walmart Supercenters w/in 25 miles	# of Walmart Supercenters w/in 50 miles	# of Walmart Supercenters w/in 100 miles	# of Commissaries w/in 25 miles	# of Commissaries w/in 50 miles	# of Commissaries w/in 100 miles
Average	5.96	55.97	8.28	17.91	52.77	1.16	0.96	2.87
Standard Deviation	11.38	45.11	6.07	10.91	28.14	9.51	1.5	2.97

Max	86.36	211.08	45	81	119	132	10	15

If these 198 major metropolitan areas listed on Appendix A are home to numerous eligible patrons, Walmart Supercenters are providing eligible patrons and their families residing in major population centers with closer access to low-priced grocery items than commissaries, according to the data presented in this study.

H. MILITARY BASES (APPENDIX B)

- According to Appendix B, there are 133 military bases that have no commissaries within a 25 mile radius. Of those 133 military bases, the

average distance to the nearest commissary is 81.18 miles. In comparison, there are only 25 military bases that do not have a Walmart Supercenter within 25 miles. Of those 25 bases, the average distance to the nearest Walmart Supercenter is 49.30 miles.

- The average distance of the closest commissary to a base is 31.09 miles, while the average distance of the closest Walmart Supercenter to a base is 8.97 miles (Table 2).
- There is an average of 7.63 Walmart Supercenters within 25 miles of a base and only 1.63 commissaries within 25 miles of a base (Table 2).
- Within a 50 mile buffer of every base there is an average of 17.28 Walmart Supercenters, compared to only 2.21 commissaries (Table 2).
- Within a 100 mile buffer of every base there is an average of 47.24 Walmart Supercenters, compared to only 4.16 commissaries (Table 2).

Table 2. Military Bases and Proximity to Walmart Supercenters and Commissaries

	Closest Walmart Supercenter	Closest Commissary	# of Walmart Supercenters w/in 25 miles	# of Walmart Supercenters w/in 50 miles	# of Walmart Supercenters w/in 100 miles	# of Commissaries w/in 25 miles	# of Commissaries w/in 50 miles	# of Commissaries w/in 100 miles

I. RATIO ANALYSIS: RETIRED VETERANS, ACTIVE DUTY, WALMART SUPERCENTERS, AND COMMISSARIES BY STATE

Table 3 depicts the number of active duty personnel and retired veterans by state and the number of Walmart Supercenters and commissaries by state. Table 4 presents various ratios calculated using the data from Table 3.

- Population and Retail Outlet Analysis
- There is an average of 40,497.20 retired veterans per state (Table 3)
- There is an average of 20,906.39 active duty personnel per state (Table 3)
- Together there is an average of 64,403.59 retired and active duty veterans per state (Table 3)
- On average, there are 66.49 Walmart Supercenters per state, while there are 3.45 commissaries per state

There is a higher customer-to-store ratio for Walmart Supercenters than commissaries, which offers better accessibility. The customer-to-store ratio can be used to quantify availability to the customer. In the case of active duty personnel, for example, the customer-to-store ratio is about 443:1 for Walmart Supercenters. The ratio is about 4,814:1 for commissaries. We can now determine that 443:1 is much better than 4,814:1 by more than a factor of 10. The smaller ratio indicates there are more stores available per customer. The larger ratio indicates fewer stores per customer. In this manner, the customer-to-store ratio measures availability of retail outlets to customers. Seventeen states have one commissary and four states have zero commissaries, which limits accessibility for eligible beneficiaries in 44% of CONUS. The ratios prove Walmart Supercenters are more accessible to eligible beneficiaries and is a critical factor for the price study utilizing Walmart Supercenters as a suitable alternative to the commissary.

- Customer-to-Store Ratio Analysis (Table 4)
- In each state, there is an average of 746.49 retired veterans per Walmart Supercenter (ratio of 747:1)
- In each state, there is an average of 11,468.09 retired veterans per commissary (ratio of 11,468:1)
- In each state, there is an average of 443.27 active duty personnel per Walmart Supercenter (ratio of 443:1)
- In each state, there is an average of 4,813.88 active duty personnel per commissary (ratio of 4,814:1)

J. SUMMARY

The data revealed in this study is useful when discussing the commissary as a benefit. In order for the commissary to be a true benefit, it must be available to those it proposes to serve. Numerous eligible patrons do not have access to a commissary due to the limited stores that exist throughout CONUS. To put this into perspective, Defense Distribution Center Susquehanna and Defense Supply Center Philadelphia are two small bases located in the state of Pennsylvania. Together, there are 594 active duty sponsors and 1,217 dependents stationed at these two bases (Demographics, 2012). If a young service member and his or her family stationed at DDC Susquehanna wished to shop at a commissary, he or she would have to drive 17.16 miles. However, the same service member would only have to drive 4.35 miles to the nearest Walmart Supercenter. If a young service member and his or her family stationed at DSC Philadelphia wished to shop at a commissary, he or she would have to drive 25.68 miles. However, the same service member would only have to drive 3.33 miles to the nearest Walmart Supercenter. The large installations with sprawling military communities most often have a commissary nearby to support the active duty service members and their families. According to the data, many smaller bases are not supported by a commissary. The numerous personnel stationed at smaller bases are many times left with fewer options and must either shop at a Walmart Supercenter or drive long distances in order to buy discount groceries. Martin Alcott in his 1994 thesis argued that the commissary cannot be a true benefit if it is not readily available to eligible personnel. That argument is just as relevant today as it was twenty years ago. If the mission of the commissary is to provide a benefit that supplements the military pay system through low-cost groceries, Walmart Supercenters already provide this benefit to the general public and are more readily available to potential commissary patrons throughout CONUS.

V. PRICE DATA AND ANALYSIS

A. OVERVIEW

This chapter presents the shelf price data we collected on Thursday October 16, 2014, from the Fort Ord Commissary and the Marina, California, Walmart Supercenter. This case study's purpose was to determine the actual cost savings to military members based on a 122-item market basket containing exact items (apples to apples) and a market basket containing Walmart's Great Value generic brand versus items at the commissary. It is aimed at answering the following two research questions:

- What is the price difference if a patron purchases the exact items at a commissary and a Walmart Supercenter?
- Can the price difference be further reduced or eliminated by purchasing generic alternatives?

While the market basket may not be an actual market basket because an average shopper would not buy one of each item, thereby making quantities arbitrary; this study uses the term "market basket" to refer to the 122 items we utilized in the price comparison.

B. MARKET BASKET DATA

The first step in completing the price comparison was to determine a list of items based on our shopping habits and the 2013 Consumer Price Index (CPI). It was composed of a variety of meat, produce, dairy products, grocery and frozen products. Our next step was to manually generate the price data from same day site visits to the Fort Ord Commissary and the Walmart Supercenter located in Marina, California. The findings are broken down by item, the name brand at the commissary and Walmart, item's size and unit and the price at the commissary, Walmart, Walmart's generic Great Value brand, if applicable, and the savings and percentage saved by shopping at the commissary relative to shopping at the Walmart Supercenter. All items are of equal size with the exception of seven Great Value brand items which were not available in comparable sizes including:

- Eggs—12 eggs

- Canned pinto beans–15.5 oz
- Canned northern beans–15.5 oz
- Canned kidney beans–15.5 oz
- Canned chicken–12.5 oz
- Tortillas–8 tortillas
- Frozen waffles–8 waffles

The price data, savings and percentage saved is illustrated in Table 5.

Table 5. Price Data between Fort Ord Commissary and Marina, CA, Walmart Supercenter

				Commissary	Walmart			Great Value Brand

C. ANALYSIS

Table 5 illustrates that given our 122-item market basket composed of meat, produce, dairy, grocery and frozen products, a shopper will pay \$265.69 at the commissary and \$319.33 for the same items at the Walmart Supercenter, resulting in a total savings of \$53.64 or 16.80%, prior to any sales tax or commissary surcharge. The savings will completely be reduced and the shopper will end up saving \$5.75 or 2.21% by purchasing the same 122 items, this time substituting Great Value brands for the name brands when available. In California, some items are exempt from sales tax including many groceries; therefore, the savings are further reduced due to the mandatory five percent commissary surcharge (What is Taxable, 2013).

While it can be argued the 16.80% savings on name brand products is substantial, it is far less than the findings illustrated in the 2013 DeCA price comparison. The DeCA comparison, which utilized the all outlets combined database (AOC) through the Nielsen database was much broader in scope and included supermarkets such as Kroger, Winn Dixie, Giant Foods, HEB, Publix, and Food Lion as well as drug, mass, cooperating club stores and dollar stores (Information Paper on 2013 Price Comparison Survey, 2013). The study further used random sampling techniques on items which were not scannable and determined that the savings, without taking into account surcharge or sales tax, was

28.50% in CONUS (Information Paper on 2013 Price Comparison Survey, 2013). Additionally, the study failed to mention the mandatory five percent commissary surcharge discussed above. Depending on the location of the commissary, this can also reduce the savings as only 12 of the 48 CONUS states currently have a sales tax on groceries, ranging from 1% to 7% and of the twelve states that do, only three are above 5% (Federation of Tax Administrators, 2014).

As discussed above, we realize this may not be considered an actual market basket because an average shopper wouldn't buy one of each item, thereby making quantities arbitrary, therefore, we broke the data down further to illustrate the percentage savings on each individual item. As illustrated a shopper is able to save money on ninety one of the one hundred twenty two items by utilizing the commissary on exact items. The number of items a shopper is able to save money on is further decreased when the shopper is willing to purchase Great Value Brands in place of name brands, as only thirty three of the ninety four applicable items result in a savings.

Tables 6 and 7 illustrate the savings determined through our case study, as they show the percentage saved by category and the average percentage saved by category by shopping at the commissary relative to Walmart Supercenter, broken down by name brand products versus the Great Value brand. Table 8 presents a clearer picture as it shows the percentage savings determined by DeCA in their 2013 price comparison (Information Paper on 2013 Price Comparison Survey, 2013).

Table 6. Percentage Savings at the Commissary by Category (Brand Names versus Great Value Brand)

	Savings at Commissary (Brand Names)	Savings at Commissary (Great Value)
Meat	23.09%	15.77%
Produce	4.15%	N/A
Dairy	25.64%	11.94%
Grocery	13.69%	-15.51%
Frozen	18.16%	-7.28%
Total	16.80%	-2.21%

Table 7. Average Percentage Saved at the Commissary (Brand Names versus Great Value Brand)

	Average Percentage Saved at Commissary (Brand Names)	Average Percentage Saved at Commissary (Great Value)
Meat	23.20%	-22.54%
Produce	-8.42%	N/A
Dairy	25.35%	11.27%
Grocery	15.73%	-13.43%
Frozen	8.83%	-12.74%
Total	14.28%	-11.34%

Table 8. Percentage Savings at the Commissary (Information Paper on 2013 Price Comparison Survey, 2013)

	Savings at Commissary
Meat	38.80%
Produce	47.80%
Dairy (AOC)	26.20%
Grocery Food (AOC)	23.50%
Frozen (AOC)	26.80%

The data presented in Tables 6 and 7 is vastly different than the savings estimated in the DeCA price comparison, which showed that in CONUS, the greatest savings are realized on meat and produce and the least amount was saved on grocery items (Information Paper on 2013 Price Comparison Survey, 2013). Our case study illustrates that the greatest potential for savings is on dairy and meat while savings on produce are minimal. It further illustrates that there is the potential for even greater savings if the shopper is willing to substitute the Great Value Brand for the name brand.

With the exception of dairy products, Tables 6 and 8 present a far different story when utilizing Walmart Supercenters exclusively versus the AOC database. The greatest disparity again is seen in produce items as our savings was only 4.15% while the DeCA study found the savings to be 47.80%. Additionally, our study determined the savings on

meats; grocery food and frozen food were substantially lower. Taking a look back, Table 5 illustrates that only two of sixteen meat items, two of fifteen produce items, three of nine dairy items, twenty seven of seventy nine grocery items, and zero of three frozen items exceed the published commissary percentage saved. Therefore the actual savings only exceeds the published savings on thirty four out of the one hundred and twenty two items which equates to only 27.87% of the items. While it cannot be argued that the commissary does offer eligible patrons savings, given the data presented in Chapter IV along with the data presented in this chapter, Walmart Supercenters appear to be at least one viable alternative.

D. SUMMARY

This chapter has provided a comparison between our case study price comparison and the 2013 DeCA price comparison, where the follow up request for underlying information was denied. It also answers the two research questions; what is the price difference if a patron purchases the exact items at a commissary and a Walmart Supercenter and can the price difference be further reduced or eliminated by purchasing generic alternatives? While we were unable to replicate the DeCA price comparison item for item due to the unavailability of underlying data, our study seems to present a different picture. Although the potential for savings exists at the commissary the availability presented in Chapter IV must also be taken into account. The rise of commercial supermarkets, with their own brands, offers the military shopper a suitable alternative with the potential for even greater savings.

VI. SUMMARY

A. OVERVIEW

We began this thesis by recounting the history of the commissary, establishing how the DOD was introduced into the grocery business. Commissaries were first established to provide a basic need to patrons in remote areas. The number of patrons has grown exponentially over the years and so has the number of commissaries. Today, the idea of supporting remote locations is no longer a main focus. DeCA's primary focus is for commissaries to benefit or supplement the military pay system by providing groceries at cost to patrons. Despite the many commissioned studies that questioned the need for the DOD to stay in the grocery business, DeCA has endured to be an organization that many believe to provide a vital benefit to service members.

However, we have found that most service members have more ready access to Walmart Supercenters, a plausible discount grocery alternative, than to commissaries. To make this determination, we conducted a detailed location study that analyzed the distances of commissaries and Walmart Supercenters from military bases and major metropolitan areas. The data supported that Walmart Supercenters are more accessible to eligible commissary patrons than commissaries. Walmart Supercenters significantly outnumber commissaries and also offer competitive pricing on name brand products, as well as low-price generic products. This study shows that suitable alternatives to the commissaries are available now more than ever. These alternatives like Walmart Supercenters have competitive pricing and provide more convenient locations for all patrons within CONUS. Commissaries currently require \$1.4 billion in annual funding to support their operations and have consistently come under Congressional scrutiny as the DOD downsizes. The benefit of the commissary is only valuable to the patrons that have access to commissaries and are not constrained by distance. Many patrons who do not live near a commissary must seek alternative sources to purchase groceries.

B. CONCLUSION

On September 22, 2011, chairman of the Joint Chief of Staff, Admiral Mullen, said, “I’ve said many times that I believe the single, biggest threat to our national security is our debt, so I also believe we have every responsibility to help eliminate that threat. We must, and will, do our part” (Marshall, 2011). In order to reduce national debt, leaders face the challenge of increasing revenues while decreasing expenditures. Congress is compelled to reexamine each expenditure in the discretionary budget and determine which expenses are necessary and which should be removed from the budget.

If commissary privileges were truly a supplement to the pay and benefits of military personnel, then every military member should have reasonable access to the nearest commissary. DeCA’s mission is to “deliver a vital benefit of the military pay system that sells grocery items at cost while enhancing quality of life and readiness” (DeCA, 2014, p. 8). Unfortunately, the bases in CONUS that DeCA aims to serve are on average 31.09 miles away from the nearest commissary. If many service members are not provided reasonable access to what DeCA identifies as a “vital benefit of the military pay system” (p. 8), then the commissary only benefits a select number of patrons that are lucky enough to be stationed at a base that is a reasonable commute from the nearest commissary. Those that cannot take advantage of their commissary privileges do not benefit from the \$1.4 billion appropriated every year to support the commissary (Defense Commissary Agency, 2013).

There is no doubt that Walmart Supercenters are a suitable alternative for the average American consumer purchasing grocery products. The grocery business has undergone a dramatic change since Walmart Supercenters began opening multiple branches throughout CONUS. Our country has never before witnessed a time where a single grocery chain dominated the entire supermarket industry (Lepore, 2014). In order to compete with Walmart’s low discount prices and convenient locations, competitors are forced to survive in a business environment where there is a diminishing market share and a transition away from the traditional supermarket. The military consumer is not immune from these trends and most likely considers Walmart Supercenters an alternative to shopping at the commissary, especially in areas where commissaries are not

conveniently located. Since suitable alternatives exist that provide low-cost groceries in most places throughout CONUS, keeping commissaries open may not be necessary.

Additionally, the number of commissaries operating in CONUS is dependent on the size of the force, which rises during a war and reduces during peace time. The Military Personnel appropriation will always fluctuate, depending on the number of service members are needed to fulfill DOD's strategic commitments. Yesterday, the wars in Iraq and Afghanistan required an extraordinary build-up of forces. Today, the DOD is rolling back the number of troops on the ground and downsizing the force to a mere fraction of what it used to be. Supporting organizations like DeCA have difficulty downsizing in lockstep with the military branches it are tasked to support. Creating more jobs and expanding infrastructure is often an easier prospect than dismissing employees and closing down stores. The DOD should stick to what it does best: fighting wars and defending our nation. Selling groceries should be left to those organizations that have proven to be the most competitive in the free market.

Walmart Supercenter is a valid alternative to the commissary because of their ability to almost match commissary prices with the Great Value Brand and ease of access due to the number of stores across CONUS. DeCA provides the lowest cost product to customers, but accessibility does not allow for all eligible patrons to utilize the benefit of shopping at a commissary.

C. RECOMMENDATIONS

The current fiscal environment calls for tough decisions to be made on all government funded programs and the commissary system is no exception. As discussed throughout this thesis, commissary appropriated funding levels have exceeded \$1 billion and warrant continued scrutiny. As our study has illustrated there is the potential for the government to save a substantial portion of the appropriated funding. Our recommendations take two approaches, the first is to seek no savings of tax dollars, but to pass the benefit to the eligible member as a subsidy and the second is to cut the benefit approach by closing select commissaries. The three recommendations are below with first as a no savings approach and the second and third as benefit cutting approach.

Our first recommendation is to task DOD's Cost Assessment and Program Evaluation (CAPE) office with a cost benefit analysis that would address passing the benefit directly to all eligible members in a monthly subsidy. Commissaries benefit the members that have access only, how do we benefit those without accessibility. Starting with simple math, take the total annual dollar amount of operating costs and appropriations for DeCA and divide it by the total number of eligible patrons to commissaries and get a rough idea of the total annual benefit that could be passed tax free to eligible patrons.

$$\frac{\text{Total annual dollar amount of operating costs and appropriations for DeCA}}{\text{Total number of eligible commissary patrons}} = \text{Subsidy per patron}$$

Eligible patrons to include those out of commissary accessibility ranges would have the freedom to apply their benefit to grocery stores and grocery products of their choice. Let the eligible member have the freedom of choice on where to apply the benefit. If members choose to utilize the subsidy with Great Value Brands and the local Walmart Super Center, what would the new savings be compared to keeping the commissaries? Does a direct subsidy of the benefit allow eligible patrons to save more than the DeCA advertised 30 percent? If yes, close the commissaries and redirect the funds to eligible patrons in the form of a subsidy. CAPE is the appropriate office to run this cost benefit analysis and expand the study if necessary.

The second recommendation is to begin closing commissaries within the same geographic area, because the expectation of implementing the first recommendation will be time consuming. Chapters III and IV illustrate the numerous geographic areas that have multiple commissaries. They also illustrate the number of Walmart Supercenters available in these same geographic areas. As previously discussed, Walmart operates to make a profit and the commissary operates to provide a service. Therefore, geographic areas should be limited to one commissary. While this has the potential to inconvenience a portion of the military members living in these geographic areas, those members have the ability to shop at a Walmart Supercenter should they decide they do not want to shop at the commissary selected to remain open.

Our final recommendation is to cut appropriations through a two-step process. The first step involves determining which CONUS-based commissaries are earning a profit and then closing commissaries in the same geographic area as discussed above. The second step involves closing or selling off any commissaries turning a loss, resulting in savings to taxpayers of over \$1 billion.

D. AREAS FOR FURTHER RESEARCH

We realize that closing commissaries in the same geographic area and cutting appropriations have the potential to drastically affect current commissary shoppers. Therefore, prior to taking these actions, further research should be conducted including expanding the price study, determining the value of current infrastructure, looking at the financial statements of individual commissaries, and determining the value of the commissary to current beneficiaries. CAPE is an excellent resource to carry out these studies.

The first area suitable for further research is expanding the price study. Due to a lack of available data through the Freedom of Information Act, we were unable to expand the price study any further than our current geographic area. Further expanding can be accomplished in two ways. First, it can be expanded nationwide utilizing the same concept we used, where like items and Great Value brand items are compared at commissaries and local Walmart Supercenters. A second way to expand this would be to compare prices at commissaries and local supermarkets to determine the actual savings in different geographic regions. Finally, this information could be made available to commissary shoppers so they could be able to make an informed decision on where to shop.

The second area suitable for further research is determining the value of current infrastructure and whether it would be possible to sell it to a local supermarket or Walmart. By placing a value on the infrastructure, the government would be able to better determine which commissaries should remain open and which ones should be closed. With the infrastructure and customer base in place, the government may find that

someone is willing to take over the operations, thereby reducing commissary appropriations.

The next area suitable for further research goes hand in hand with the second area by looking at the financial statements of individual commissaries. By looking at the profits and losses of each of the 183 CONUS-based commissaries, a more informed decision could be made on which if any of the commissaries should remain open. It would also give Congress a better idea on the possibility of reducing commissary appropriated funding while still being able to provide the commissary benefit that is highly regarded by the military population.

Finally, determining the value of the commissary to current beneficiaries would be suitable for further research. By conducting a survey, a researcher would be able to determine the value the beneficiaries place on their commissary benefits. This would be useful going ahead in determining whether the possible elimination of the benefit is a fight worth fighting.
