TECHNOLOGY OPTIONS FOR AGED CARE IN JAPAN

A thesis submitted in fulfilment of the
Requirements for the award of the degree
Doctor of Philosophy
from
University of Wollongong

by

NORIKO DETHLEFS

B. Ec. M.A. *Syd*

Science, Technology and Society Program

January 2002

DEDICATION

This thesis is dedicated to my parents, my husband and my children who have all supported and encouraged me throughout the challenging process of writing this thesis.

Thesis Certification

CERTIFICATION

I, Noriko Dethlefs, declare that this thesis, submitted in fulfilment of the requirements for the award of Doctor of Philosophy, in the Science, Technology and Society Program, University of Wollongong, is wholly my own work unless otherwise referenced or acknowledged. The document has not been submitted for qualifications at any other academic institution.

Noriko Dethlefs

1.6	Situating the research in technology studies	25
1.7	Scope and contributions of the thesis	31
1.8	Conclusion.....	37

Chapter 2 Demographic changes and aged care in Japan

2.1	Introduction.....	39
2.2	Historical overview of general population trends.....	42
2.3	Ageing population in Japan and other advanced countries	44
2.4	Causes and effects of ageing population in Japan	51
2.4.1	Lower mortality	52
2.4.2	Lower birthrate.....	54
2.4.3	Reasons for declining birthrate	55
2.4.4	Suggestions to increase birthrate	62
2.5	The significance of Japan's demographic trend and aged care	66
2.6	Projection of future demographic changes in Japan	71
2.7	Conclusion	74

Chapter 3	Social changes and aged care in Japan	
3.1	Introduction.....	76
3.2	Historical overview of the Japanese family system	78
3.3	Changes in the Japanese family structure affecting aged care	81
3.4	Changes in the Japanese social values affecting aged care	95
3.5	Changes in the role of women affecting aged care	99
3.6	Changes in the attitudes of younger generation affecting aged care	105
3.7	Changes in the role of the government affecting aged care	108
3.8	Conclusion	116

Chapter 4 The role of technology in Japan: utilising technology to address socioeconomic issues

4.1	Introduction.....	119
4.2	Historical overview of technology in Japan	121
4.3	Factors promoting technology in Japan.....	133
4.4	Societal effects of technology in Japan	140
4.5	Utilising technology for aged care in Japan	143
4.6	Conclusion	148

Chapter 5 Robotics technology and its application for aged care in Japan

5.1	Introduction.....	151
5.2	Historical overview of robotics in Japan	153
5.3	Application of robotics for aged care in Japan	163
5.4	Guidelines to implement robotics for aged care in Japan.....	170
5.5	Case studies of robotics for aged care in Japan	173
5.6	Exploration of humanoid robots	191
5.7	Conclusion	193
Appendix	References dealing with robotics	195

Chapter 6 Assumptions underlying the high-level technology option

6.1	Introduction.....	209
6.2	Assumptions.....	215
6.3	Discussion of selected articles illustrating the assumptions ...	235
6.4	Assumptions in developing specific robots for aged care	243
6.5	Conclusion	247

Chapter 7 Barrier-free technology and its application for aged care in Japan

7.1	Introduction.....	249
7.2	Barriers in society	254
7.3	Historical overview of the barrier-free concept	257
7.4	Application of barrier-free technology for aged care	262
7.5	Examples of barrier-free products to assist aged care in Japan	265
7.6	Government support for barrier-free technology for aged care in Japan.....	269
7.7	Government support for medium-level technology for aged care in Japan	272
7.8	Societal support for barrier-free technology in Japan	279
7.9	Conclusion	284
Appendix	References relating to barrier-free technology	290

Chapter 8 Assumptions underlying the barrier-free technology option

8.1	Introduction.....	304
8.2	Assumptions.....	306
8.3	Discussion of selected articles illustrating the assumptions.....	324
8.4	Conclusion	330

Chapter 9	Potential consequences of the options	
9.1	Introduction.....	332
9.2	Option One: Relying on standard technology for aged care in Japan.....	335
9.3	Option Two: Concentrating on developing high-level technology such as robotics for aged care in Japan	347
9.4	Option Three: Concentrating on developing smaller-scale technology such as barrier-free technology for aged care in Japan	360
9.5	Conclusion	368

Chapter 10	Conclusion	
10.1	Introduction.....	372
10.2	Process and contribution of the thesis	374
10.3	Suggestions for future research.....	387
10.4	Concluding comments.....	388

ABSTRACT

Demographic changes after the Second World War have resulted in the Japanese people having the world's highest life expectancy. This, coupled with the declining birth rate, has caused a rapid growth in the proportion of aged people in the population and a declining proportion of the population in the workforce to support the non-working population. At the same time, post-War changes in social conditioning and family structures are diminishing the availability and reliability of family members to act as care-givers to the aged.

Historical evidence suggests that the Japanese people, and in particular the government, are open to finding technological solutions to address their social and economic problems. One method of dealing with the scarce resources for aged care in Japan is to develop and utilise technology that assists the elderly to maintain as much independence for as long as possible and to assist care-givers by easing their workload.

This thesis examines three technology options that can be used to help aged care in Japan today. Option One uses only standard technology from other countries; Option Two calls for investment primarily in high-level technology development, exemplified by robotics technology; Option Three concentrates on developing and using smaller-scale technology such as barrier-free technology for aged care. Details of the development of robotics and barrier-free technologies and the assumptions underlying their

development for aged care are examined.

The thesis discusses ways in which these options affect various stakeholders—the government, researchers, professional care-givers, family care-givers and recipients of the care. This framework for assessing technology for aged care—spelling out options, unearthing assumptions underlying the options and surveying effects—is a useful and convenient tool for policy makers and other interested parties.

List of Tables and Figures

Tables:	Page
Table 1.1	Typical characteristics of two types of technology 34
Table 2.1	Infant mortality rate in Japan 52
Table 2.2	The UN classification of countries according to the proportion of the population over the age of 65 66
Table 3.1	Percentage of female workers in industries 101
Table 9.1	Consequences of Option One 347
Table 9.2	Consequences of Option Two 360
Table 9.3	Consequences of Option Three 368
Table 9.4	Consequences of different technology options in aged care 371

List of special names, abbreviations, and exchange rate

1. Romanisation of Japanese: The modified Hepburn system has been used except for proper nouns. Authors, city names are in the Anglicised form used by writers.
2. An approximate exchange rate between Japanese yen and US dollar of 110 Japanese yen to US \$1 has been applied unless otherwise noted. The average of the annual average rate (yen per US\$1) between 1995 and 1999 is 113.7yen to US\$1. The average of the end-of-the-year rates for 1998 and 1999 is 108.5yen to US\$1. These figures are supplied by the Bank of Japan (Foreign Press Center: 2000, 50, *Asahi Shinbun Japan Almanac2001*, 2000, 111).
3. Ministerial names: From January 6, 2001 the Ministry of International Trade and Industry (MITI) has become the Ministry of Economy, Trade and Industry and the Ministry of Health and Welfare was changed to the Ministry of Health, Labour and Welfare. The names used in the thesis are those before these changes occurred.
4. Abbreviation of Ministry of Health and Welfare (MHW); New Energy and Industrial Technology Development Organization (NEDO); Universal Design (UD); The Technology Research Association of Medical and Welfare Apparatus (TRAMWA);

PUBLICATIONS IN SUPPORT OF THE THESIS

Dethlefs, N., 'Issues in the development of robotics technology for aged care in Japan', *Australasian Journal on Ageing*, vol. 18, no. 3, November, 1999, pp 18-22.

Dethlefs, N., 'Perspectives in Aged Care in Japan: The Role of Technology', *Japanese Studies: communities, cultures, critiques, Volume two: Identity politics and critiques in contemporary Japan*, Monash Asia Institute, 2000, pp 69-82.

ACKNOWLEDGMENTS

I owe much gratitude to many people who have supported, encouraged and guided me during the path to completion of this thesis. In particular, I wish to thank the following people:

Brian Martin, my supervisor and mentor, who has given me unstinting support, encouragement with amazing patience and wisdom as well as invaluable advice throughout the journey.

Rhonda Roberts for all her invaluable guidance as a caring associate supervisor.

Kim Drasima and Jan Skillen of Learning Development for guidance on thesis writing.

Robyn Iredale for offering to discuss demographic aspects of the thesis.

Rose Melville for offering to discuss social context of the thesis.

Dudley Jackson for offering overall detailed comments.

Phillip McKerrow, Peter Robinson, and Golshah Naghdy for offering to discuss robotics.

Mr Katashi (Ministry of Health and Welfare), Mr Goto (MITI), Ms Ookuma (Asahi Newspaper, Social Issues), Professors Ide (Yamanashi University), Sato (Tokyo University), Hara (Tokyo Science University), Shimizu (Sophia University), and Shimazaki (Tokai University) as well as Mr Hoshikawa (Kyoyo-hin Foundation), Mr Niiyama (Infutec Japan), Mr Hirayama (Seizan-en Nursing Home) for sharing their time and expertise.

Lyn Murray and Margaret Norris for their time as being sounding boards.

Tami and Kimi, my daughters, for their assistance with drawing up graphs and tables and for sharing their computer skills in formatting.
