ACKNOWLEDGEMENTS

I would like to express my sincere gratitude to my supervisor, Professor Lawrence Wai-Chung Lai. Without his inspiration, invaluable advice and patient guidance, this dissertation could hardly be completed.

I am also grateful to Dr. Kelvin Siu-Kei Wong for his invaluable advice on constructing the probit models and patient guidance on whatever problems related to Statistics I encountered during the writing of my dissertation. In addition, I am indebted to Fr. Louis Keloan Ha, an Associate Professor (by Courtesy) of the Department of History of Chinese University of Hong Kong, the Director of the Centre of Catholic Studies of the Chinese University of Hong Kong. His experience from the researches of the St. Michael's Catholic Cemetery inspired me a lot.

Besides, I would like to take this opportunity to show my appreciation to my family, Miss Katie Li, my classmates especially Mr. Sunny Tam, Mr. Francesco Chan, Mr. Alvin Cheung, Mr. Calvin Ng, Miss Gerberta Lee, Miss Stephanie Wong and Miss Alice Lai, my friends and scouts from 35th HKG.

Special thanks are given to Mr. Geoffrey Weatherill Bonsall, former Deputy Librarian of the University of Hong Kong and Director of the Hong Kong University Press; his assistance in English editing is highly appreciated.

Above all, I have to express my thanksgiving to God as all the things I possess are gifts from him.

ROGER Irenaeus Chan

MARY	Name of the Blessed Virgin Mary
SAINTS	Name of St. Joseph or John the Baptist or the 12 Apostles
SMCC	St. Michael's Catholic Cemetery
VATICAN2	The Second Vatican Council

ABSTRACT

Inspired by the work of Rossi (1965), Zelinsky (1970), Franklin (1986), Lieberman & Bell (1992) and Main (1996) which studied the social and cultural aspects of a group of people from their naming pattern, this dissertation is an original attempt to apply a statistical technique that has been widely used to interpret binary development control decisions to deal with a difficult subject “name studies” using information revealed in a rare type of real estate- cemeteries – treated by many as merely heritage assets.

Arithmetic Comparison and Probit analyses were adopted to study 1,627 names and personal data of Catholics collected from St. Michael’s Catholic Cemetery. Furthermore, 1,118 names of Protestants collected from Hong Kong Cemetery are used for control and comparison purposes.

The evaluation was conducted with eight refutable hypotheses related to the popularity of Christian names and factors in the choice of Christian names. In Table (A), test results and the implications for the eight hypotheses are summarized.

Table (A) Summary Results for the Eight Hypotheses

Hypotheses regarding the choice of Christian name	Methodology	Test Result	Implication
Female Catholic tombs do not have a higher probability of bearing the name Mary than other names	Arithmetic Comparison	Hypothesis is refuted	As the popularity of names of Catholics is consistent with the hierarchical order of saints, this tradition is respected by Catholics.
Male Catholic tombs do not have a higher probability of bearing the names Joseph and John than other names	Arithmetic Comparison	Hypothesis is refuted	
Male Catholic tombs do not have a higher probability of bearing the names of the 12 Apostles than other names after Joseph and John	Arithmetic Comparison	Hypothesis is refuted	
The probability of a female Catholic tomb bearing the name Mary will not be higher if the deceased is a Chinese person	Probit Analysis	Hypothesis is refuted	To compare with Catholics of other ethnicity, traditional Christian names are more popular among Chinese Catholics.
The probability of a male Catholic tomb bearing the name Joseph or John or the 12 Apostles will not be higher if the deceased is a Chinese person	Probit Analysis	Hypothesis is refuted	

The probability of a female Catholic tomb bearing the name Mary will not be lower if the year of birth of deceased is later	Probit Analysis	Hypothesis is refuted	The popularity of the traditional Christian names decreases as time passes.
The probability of a male Catholic tomb bearing the name Joseph or John or the 12 Apostles will not be lower if the year of birth of deceased is later	Probit Analysis	Hypothesis is refuted	
The probability of a female Catholic tomb bearing the name Mary will not be lower if the deceased is born after 1965	Probit Analysis	Hypothesis is refuted	The second Vatican council possesses a negative effect to the use of the name Mary

CHAPTER 1

INTRODUCTION

According to the American Heritage Dictionary of the English Language, Real Estate is a legal term that encompasses land along with improvements to the land, such as buildings, fences, wells and other site improvements that are fixed in location - immovable.

In fact, the definition of Real Estate is so wide that it includes all immovable things fixed on a piece of land. Cemeteries and gravestones are also real estate although they are seldom discussed.

Unlike the Chinese community where cemeteries are seen as taboo or dangerous places (Teather 1998: 21), cemeteries in the west are romantic places that attract many tourists. Pere Lachasie in France, Recoleta Cemetery in Argentina and the Westwood Memorial Park in the United States are famous tourist spots and great people are buried. For westerners, it is not only a place for burial, it also offers an appealing and appropriate landscape for remembering the dead and mediating the relationship between the dead and the bereaved. (Tarlow 2000:217) And at the same time, the study of cemetery has gained popularity among scholars of Archaeology, History, Culture and Sociology.

In Hong Kong, because of the promotion of heritage conservation and the inadequate burial space, issues related to cemeteries have aroused the public awareness. Study of local cemeteries is gaining momentum (Ting 2008: 15).

Smith (1985), Bard (1997) and Ko (2001) have studied the Hong Kong Cemetery to find out the historical events and local issues of early Hong Kong. On the other hand, the Chinese University of Hong Kong (Department of Cultural and Religious Studies) has launched a project to study the St. Michael's Catholic Cemetery to understand the religious beliefs and traditions of Catholics in Hong Kong.

In fact, a cemetery does not only serve as a source of history (Bard 1997: 1), it reflects different aspects of our society.

Francaviglia (1971: 509) stated that

In the cemetery, architecture, town planning, display of social status and racial segregation, all mirrors the living, not the dead, Cemetery tell us a great deal about the living people who created them.

In this dissertation where the choice of names of Catholics is studied, the cemetery acts as information as the inscription on gravestones records the name of the deceased.

In the past, the best approach to obtain such personal data would be from the baptismal registers at each parish church. However, the introduction of the Personal Data (Privacy) Ordinance (Chapter 486) in 1995 has prohibited this action. Therefore, gravestones in cemeteries will be the second-best source of reliable information because these cemeteries are not closed to the public.

Background Of The Cemeteries at Happy Valley

On 25th January 1841, the British navy under Sir Gordon Bremer landed on the Hong Kong Island. And on the next day, the British announced their formal occupation of the island.

However, the British did not have a good start in Hong Kong as a lot of soldiers died of the severe epidemic of fever. According to Ting's (2008: 10) elaboration,

British soldier who had come a long way to take part in the Opium war were unable to acclimatize to the heat and humidity of Hong Kong. Adding to it was the rampancy of malaria. The mortality rate among British soldiers was extremely high.

As more and more soldiers died, the need for a cemetery has become very urgent. A 19th century publication¹ recorded that

Deaths now (in 1841) became frequent occurrences also among the European community, hospitals had to be hastily constructed and the first cemetery began to fill...

¹ Hawkins. R.S. (1968). Far East Outpost, *The Royal Engineers Journal* Vol. LXXXII p. 41

To cope with sudden increase of dead bodies, the first cemetery in Hong Kong located in Wan Chai (at the present St. Francis' Chapel and above the Queens's Road East) was constructed (Ko 2001: 241). Several months later, another piece of land adjacent to the cemetery was allotted as a burial ground for the Roman Catholics (Ko 2001: 242) (See Fig 1.1).

The occupation of Hong Kong seemed to be uneasy at first as the epidemic of fever continued to visit Hong Kong every summer. In 1843, the annual death rate among European troops in Hong Kong was 22 percent and it was even higher in Indian troops (Ko 2001: 242). The burial ground in Wan Chai was running out of space and there was a need a build a new cemetery again.

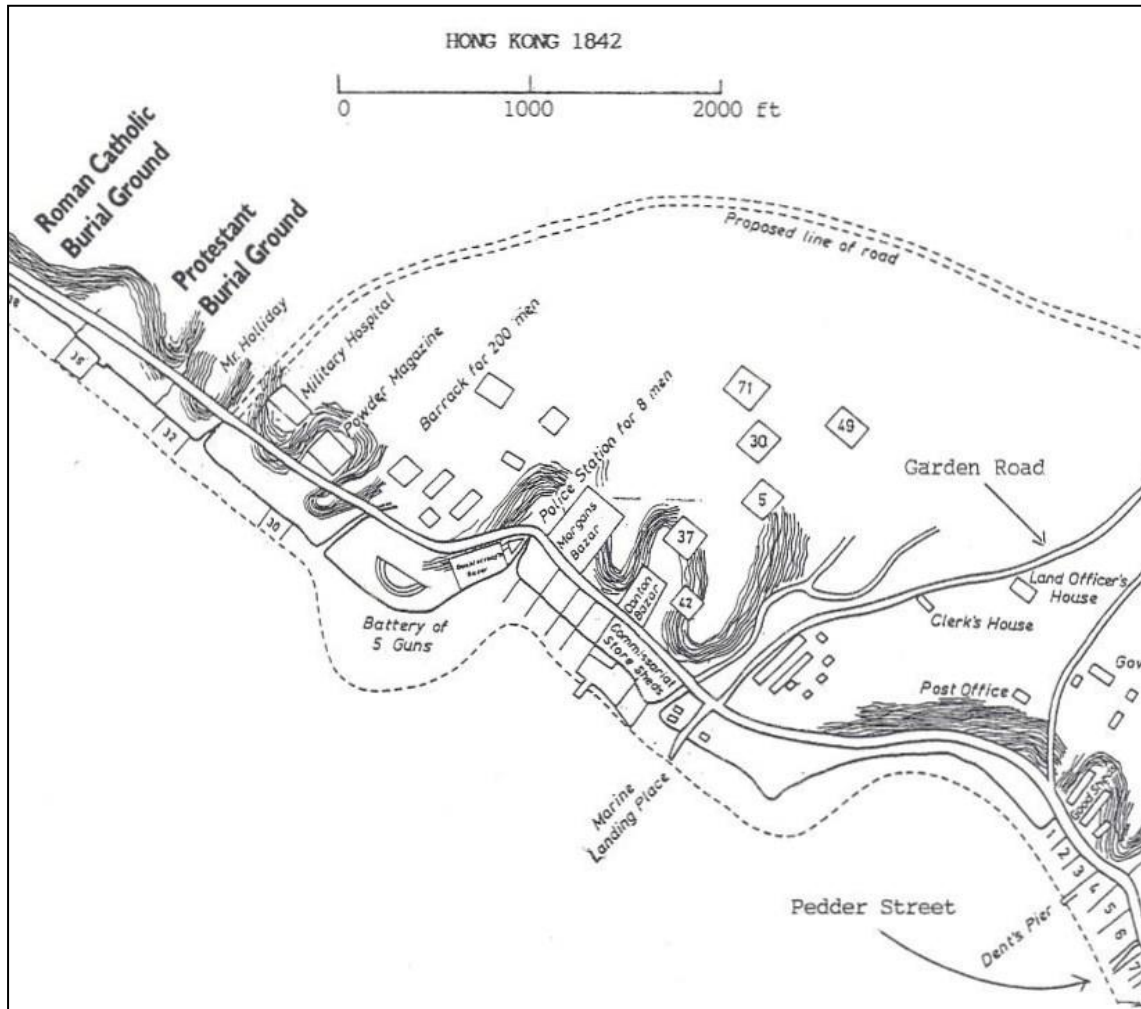

Fig 1.1 Hong Kong Island's Waterfront in 1842 showing the original location of Protestant and Roman Catholic burial grounds in the present-day Wanchai. From "Pottinger's Map".

The Hong Kong Cemetery

In 1845, the Hong Kong Cemetery located in Happy Valley was opened and it was managed by the Colonial Chaplain at first (Ting 2008: 12). The management of the cemetery was later taken over by the Sanitary Board and now is the Food and Environmental Hygiene Department. From the government documents, it was discovered that the cemetery was named as Protestant cemetery at first. Hence, deceased who buried there are Protestants only.

As there were more and more wealthy Chinese businessmen settling in Hong Kong in the early 20th century, the voice for a piece of permanent burial place for Chinese has become louder (Ting 2008: 13). Lau Chu-pak who was the Chinese representatives argued that the cemetery was public and it should also be opened to the non-Christian Chinese (Ting 2008: 13). Because of the strong public opinion, the Protestant Cemetery Ordinance was enacted in 1909 and it allowed the burial of non-Protestants in an isolated spot.

Because of its long history, Hong Kong Cemetery has been the burial place of many well-known people of early Hong Kong. The memorials of Sir Robert Ho Tung, Sir Catchick Paul Chater, Kan Tung-po and Sir Kai Ho Kai can all be found there (See Photograph 3, 4, 5). Furthermore, the cemetery provides us another way to see the history of Hong Kong.

St. Michael's Catholic Cemetery

As the burial ground for Roman Catholic in Wan Chai was running out of space shortly after it was built, a new burial site (later named as St. Michael's Cemetery) for the Catholics which was adjacent to the Hong Kong Cemetery was granted on 7th January, 1848 (Ko 2001: 244). The term of the lease is 999 years and the rent is 1 dollar per year.

The cemetery is opened for deceased of different nationalities. Tombs of Chinese, British, Irish, Italian, Portuguese and French could be found there. It is a burial place for many well-known Catholics like Tang King-po, Peter Kwang Yung Tsao, Sir Harry Fang and Linda Lin Dai (See Photograph 7, 8, 9).

In the dissertation, names of the Protestants and Catholics were collected from these two cemeteries.

Research Context

This research originates from the sociology of name studies by Rossi (1965), Zelinsky (1970), Franklin (1986), Lieberman & Bell (1992), Main (1996). By analyzing the naming pattern of a particular community, these researches aimed at finding the factors to the choice of names. Ethnicity, religions, education, sexes, family relationships, political views were found to be relevance to the choice of name. The studies of names provide another view to the cultural and social aspect of a community.

In this dissertation, the naming habit of Catholics will be studied by using the information obtained from a special form of real estate – cemeteries – treated by many as merely heritage assets. Factors to the choice of name, social and religious background of the Catholics will be revealed too.

Objectives

This dissertation is the first one to study the naming pattern of Catholics and it serves for the following four objectives.

- I. To study the naming habits of the Catholics
- II. To study the factors to the choice of Christian names by Catholics
- III. To see the cultural background and religious beliefs of Catholics
- IV. To show the usefulness of cemeteries as information source

Organization

This dissertation consists of five chapters. Chapter 1 gives a brief introduction and the background of the research. Chapter 2 reviews literature in the area of cemeteries, names studies and the Catholicism. Chapter 3 explains the eight refutable hypotheses and the methodologies employed. Equations of the probit models and the data collection method will be described. Chapter 4 explains the results of the probit analyses and the arithmetic comparison. Cultural aspect and religious belief of Catholics in Hong Kong will be revealed. Chapter 5 is the conclusion which includes the limitation and further studies of this dissertation.

CHAPTER 2

LITERATURE REVIEW

As this dissertation relates to different academic fields, this chapter reviews researches that are important to the formation of this dissertation. These researches are mainly from three fields which are the Cemetery Studies, Sociology of name studies and the Religious Studies. The significance of this dissertation will also be explained.

Cemetery Studies

As the architecture of cemeteries and the inscription on gravestones provides a lot of useful information, cemeteries have been studied by scholars from different fields like, Archaeology, Cultural Studies, Sociology, Geography and History. The following chart stated researches of cemetery in different fields.

Table 2.1 Researches related to Cemeteries

Fields	Author	Research Topic	Content
Archaeology	Dethlefsen et al (1966)	Death's heads, cherubs, and willow trees: experimental archaeology in colonial cemeteries	By studying the gravestone in 17 th and 18 th century in Massachusetts, the author tried to find out the culture that produced the design of gravestones. Death's heads, cherubs and willow tree were the design used for explanation.
Archaeology	Hayes (1992)	Old Chinese Graves from the Tsuen Wan District of New Territories	The article studied the various form of graves in the Tsuen Wan District of the New Territories
Cultural studies	Blom (2000)	Ambivalent heritage: between affect and ideology in a colonial cemetery	The article examined the significance of the colonial cemeteries in India and explained why they are neglected and decayed now. The author suggested that it is because of the ambivalence it generates

Cultural studies	French (1974)	The Cemetery as Cultural Institution : The Establishment of Mount Auburn and the “Rural Cemetery” Movement	By studying the Mount Auburn Cemetery, the author explained that the cemetery is not only a place of burial, but also a cultural institution as well.
Cultural studies	Miller et al (2006)	Hallowed Ground, Place and Culture: The Cemetery and the Creation of Place	The author explored the historical development of modern cemetery and used the cemeteries of New Orleans, Louisiana as case studies to explain how the cemetery is influenced by the culture and their cultural significance.

Cultural studies	Tarlow (2000)	Landscapes of memory	The article studied the various aspects (public health, class relationships and foreign influences) of the garden cemeteries in Britain. However, the author thought that the popularity of a garden cemetery is because of the appealing and appropriate landscape it offers. People can remember the dead and mediate the relationship between the dead and the bereaved in a garden cemetery.
Cultural studies	Teather (1999)	The case of the disorderly graves: contemporary death spaces in Guangzhou	By studying the disorderly graves in Guangzhou, the author studied the factors (economic and political) shaping contemporary death spaces in Guangzhou and the cultural significance of the death space. The author concluded that the death space in Guangzhou reflected the conflicts between the modern and traditional.

Cultural studies	Wilson (1960)	Chinese burial customs in Hong Kong	The burial customs of Chinese in Hong Kong were studied in the article. The meaning and the cultural significance of these customs were also explained.
Culture and Architecture	Francaviglia (1991)	The Cemetery as an evolving cultural landscape	From the studies of five Oregon cemeteries, the author found that the spatial and architectural evolution of these cemeteries is the same as the American style. It is an article to study the co-relation between the culture and the architecture of cemetery.
Design	Siu (2005)	Cultural and Design: A New Burial Concept in a Densely Populated Metropolitan Area	As the burial space in Hong Kong is inadequate and the cremation method is un-sustainable, the author proposed a new burial method called 'Invisible Niche'. To support the idea, the author also studied the cultural and social changes in Hong Kong.

Gravestone study	Bard (1997)	Garrison Memorials in Hong Kong	The author conducted a gravestone study in the Hong Kong Cemetery and studied the historical events of early Hong Kong
Grave stone study	Waters (1998)	Tracing Graves in Hong Kong	As requested by BACSA (British Association for Cemeteries in South Asia) to look for seven graves in Hong Kong, the author stated the methodologies in grave tracing.
Feng Shui	Lai (1974)	Feng Shui as a location index	The author used an ideal 'feng shui' topographic model, aerial photographs and Chinese archives to find out the first Chinese cemetery in Victoria, Canada. Furthermore, the 'feng shui' model served as a location index.

Feng Shui	Teather (1998)	Themes from complex landscapes: Chinese cemeteries and columbaria in urban Hong Kong.	By studying four cemeteries in Hong Kong, the author studied how “feng shui” has affected the location. The author discovered that landscape and location of non-religious cemeteries can reflect a good “feng shui” design while the Christian cemetery does not.
Geography	Hardwick et al (1971)	Cemeteries and urban land value	The article studied the land value of different types of cemeteries.
Geography	Kong (1999)	Cemeteries and columbaria, memorials and mausoleums: narrative and interpretation in the study of death spaces in geography	The paper reviewed geographer’s research on death space. The relevance of death space to the theoretical argument of social construction or race, class, gender and nation, the ideological underpinning of the contest between space and the centrality of space were also studied.

History	Ko (2001)	A review of the development of cemeteries in Hong Kong : 1841-1950	In reviewing the development of cemeteries in Hong Kong, the writer also studied the historical events and local issues in earlier times.
History	Ride (1962)	Old Protestant Cemetery in Macao	Through studying the Old Protestant Cemetery in Macau, the author aimed to find out some historical events and important figures in early Macau. Names and some personal information of the deceased were also provided.
History	Smith (1985)	Notes for a visit to the government cemetery at Happy Valley	The article revealed the history and development of the Hong Kong Cemetery at Happy Valley.
Sociology	Chan (2003)	Hillside burials: indigenous rights in the new territories of Hong Kong	The article studied the indigenous right of hillside burial in the New Territories and found out the importance of the burial custom to the Chinese culture.

Sociology	Foster (1998)	Patterns of conception, nationality, and mortality from Midwestern cemeteries: a sociological analysis of historical data	The research used the data from ten cemeteries (2,021 burials) to study the demographic and social pattern characterizing the Midwest of America
-----------	------------------	---	--

By studying the cemeteries, the cultural and social aspects of a community can be seen. Smith (1985), Hayes (1992), Bard (1997), Waters (1998), Teather (1998), Ko (2001), Chan (2003) who studied the cemeteries in Hong Kong also studied the history and local issues of early Hong Kong. This dissertation serves for the same purpose and the focus is narrowed down to the lives of the Catholic community in Hong Kong.

Why Do Scholars Study Gravestones?

The inscription on the gravestone not only provides the personal information about the deceased, it also tells us some important events. Bard (1997: 1) in the report of the grave stone project commented that

Inscriptions on memorials are not all equally informative. But their cumulative value is considerable in throwing light on historical events of local interest... there is no time to be lost in recording the valuable information on graves and monuments, if it is to be saved for posterity.

And in Bard's (1997: 2) study of the Military Graves & Monuments of the Hong Kong Cemetery, he suggested that a gravestone study project can be useful in different aspects like,

(1) Inscription on the memorials may provide valuable information about important events, like war, epidemics, natural calamities etc.

(2) The construction of a memorial, its symbolic and ornamental features, and its development over a period of time may be important to historians and architects

(3) Inscriptions may be of a special interest to family historians and genealogists who study the roots and movements of communities.

As gravestones are so valuable in providing different kinds of information, they act like a source of information and are studied by scholars from different fields.

Methodologies Of Gravestone Studies

In 1991, S.M. Bard and the Antiquities and Monuments Offices began a gravestone study project in the Hong Kong Cemetery. Bard's project lasted for 15.5 months and about 1300 military graves and monuments covering the period from 1841 to 1969 were studied.

According to Bard (1997: 2),

the study aims at learning about the lives and deaths of the servicemen; augmented by the background research, it is hoped to gain a composite picture, not only of the life of the garrison, with its day-to-day problems, its hazards and calamities, but also of the early Hong Kong as a whole.

The report also stated the methodologies of a gravestone study project and it is a useful reference for this research.

(1) Plan of work

As the duration of the gravestone study project is long and it involves quite a number of workers and experts, the project leader has to outline the working schedule first so as to enhance the working efficiency. From the work of Bard and the AMO, the project was divided into four phases (Survey and Field Recoding, Photography, Background Research and Collation of Results & Report) and there was a time limit for each phase. The outline can act as a reference of working progress and remind the team if they are working too slowly.

(2) Survey

For the purpose of identification, each studied gravestone is given a reference number and its location is marked on the map. As the area of the cemetery is so large and contained so many tombs, this method provide scholars and readers an effective way in finding the exact position of the studied gravestone.

In the project, a standard ordinance map which was divided into different sections was used as the basic map (See Fig 2.1). Furthermore, each section was enlarged so that each memorial could

be drawn accurately in terms of location and shape (See Fig 2.2). The reference number of the gravestone is also given in the section map.

(3) Field recording and Inscription

Since the inscription on the gravestone is an important source in providing information of the historical events and local issues, field recording is very crucial for the quality of the project. Bard (1997: 13) has stated the requirements and importance of the field recording.

From the point of view of historical research, the inscription is the most valuable component of a memorial, and maximum effort is spent on reading it as completely as possible. It is copied verbatim, in the space provided in the recording form, and every detail of spelling (including the mistakes), homilies, and religious verses is observed. The style of the writing, however, is not copied;....

Since field recording is important, the procedure has to be undertaken seriously (See Photograph 10, 11). Furthermore, Bard (1997: 23) suggested using a recording form so that the data can be arranged in a more systematic way (See Fig 2.3).

(4) Photography

Apart from copying the inscription, it is also essential to keep a photographic record of the studied gravestone. Bard (1997: 24) suggested that a photograph can record the shape and the form of a gravestone, its ornamental features and the style of the lettering of the inscription.

What Is A Name?

Unlike historians who are not very interested in the names of people they are studying, scholars from different fields like linguistic, philosophy and social anthropology have recognized the need for the studies on names for a long time (Wilson 1998: x). Yet, they hold different opinions and views on the meaning of names.

For linguists and philosophers, names serve for only one function which is to identify people (Wilson 1998: xi). In their analyses, words and names are separated and it is undergone in the absences of social context (Wilson 1998: xi). Mill (1843) said that the association of proper name to the object or person is arbitrary and they have no meaning at all. They purely refer to the person having that name without any description. Jullian (1919) suggested that names are 'sterilized words' which lost the original meaning. And they are used only as a simple label. According to Rymes (1996:238), these thoughts are reflected by modern linguistics books that all examples include two names only, Mary and John.

However, sociologists believe that names should bear some meaning and it is more than an arbitrary label only. Miller (1927: 586) pointed out that a name is the symbol of the social personality - that is, the personality as recognized by the group and as fashioned by the current folkways of that group. He also suggested that being named is

the starting point of the individual's life in a group and the individual is aggregated to his society after he gets his names.

Miller (1927: 586) illustrated his thought through his studies in the indigenous tribe from the island of Borneo. In Borneo, the child is never counted as a member of a family until he is named. If an unnamed child dies before the naming ceremony, his mother will be sad for it but no more than if the child dies as stillborn.

Though, the case mentioned will not happen in modern society, it has clearly demonstrated Miller's idea that name is the symbol of the social personality. Being named does not only provide identification for the person, it also gains the recognition as a member and a part of a group.

Some sociologists have similar thoughts as Miller and they have further elaborated his notion. Zelinsky (1970: 748) argued that name is not a good means to identify people. He stated that it is either unnecessary for purposes of identification, or does the job rather poorly. He also suggested that a numerical system like driver's licenses, telephone or military serial numbers will serve the purposes of identification more effectively. Conversely, he thinks that a name is a meaningful statement that charges a special field of images, significations, and emotional reverberations for the giver, bearer and

community at large. This notion was supported by Libeberson (1984: 77) who believed that the naming process involves an interaction between the images that the names hold for the parents and the expectations, hopes, and visions they have about their child. Anderson (2007) has also pointed out that name givers may wish to attribute qualities to the namees by their choice of name. For example, they will use names like Modesty, Patience and Felicity.

It can be concluded that a name is not only used for identification and it has some more meanings. It defines a person's social personality and possesses meaning to the giver and bearer. Therefore, a name is not an arbitrary and meaningless label described by linguistics and philosophers.

Factors Affecting The Choice Of Names And Their Implications

In the studies concerning the effect of social taste to the choice of children's first name, Lieberman & Bell (1992: 514) stated that naming is a social process and is influenced by various social and cultural factors.

The naming activity is ultimately a social process, and the resulting pattern of name usage reflects the combined influence of imagery associated with each name, the notions parents have about the future characteristics of their children, estimates of the response of others to the name, the awareness and knowledge of names through the mass media and other sources, parents' belief about what are appropriate children's names for persons of their status and institutionalized norms and pressures

Sociologists have studied the naming pattern of different groups of people to find out the factors affecting the choice of name. From their studies, the culture and some aspects of society are revealed. The following have shown the factors that have been explored and tested. Reasons for the formation of the factors are also provided.

Gender

The traditional belief is reflected from the choice of a name of a different gender. Lieberson & Bell (1992: 517) compared the naming pattern of the boys and girls born in New York State from 1973-85 and four features are discovered.

Firstly, there is a difference between boys and girls in the concentration of name. Boys' names are more concentrated in the 20 most common names than girls' name. Also, the percentage of using the most popular boys' names is higher than girls'. Secondly, more girls than boys had 'unique' names. Unique names are names that have only been used by one child in the whole sample. Thirdly, there is a difference in the rapidity of the change of name between boys and girls. Changes and turnover in the top 20 names of girls are higher than boys. Fourthly, boys' names are more traditional and girls' names are fashionable. This could be seen from the difference in the source of name. Boys' names are usually from biblical and Greek sources, while girls' names are usually diminutive, or derived from pet names, plants names or town names.

Lieberson & Bell (1992: 520) suggested that is because of the historically rooted conceptions of the roles of females and males in the society. He used the notion of Rossi (1965: 503) for elaboration.

‘Women play the more crucial role in family and kin activities, while men are the symbolic carriers of the temporal continuity of the family’

Therefore, Lieberson & Bell (1992: 520) thought that a lesser role is assigned to women and their names are relatively more decorative and open to fashion.

Education Level

In the research mentioned above, Lieberson & Bell (1992: 523) also studied how the educational level of the mothers affects the choice of name for their sons and daughters in terms of phonemic, etymology and the history of names.

Firstly, women with lower education level prefer names without long-standing historical roots than highly educated women. Highly educated women generally resist names that are too novel and lack historical roots. Secondly, n-sounding names are more attractive to mothers with higher education level. Thirdly, boys’ names having the meaning of strength are more popular among less educated mothers. While girls’ name having the meaning of goodness, strength, activity, sincerity and intelligence are more popular among highly educated mothers.

Although these features are explained by the statistical analysis, Lieberman & Bell (1992) do not explain why these forms take place.

Relationship With Kin

Names of kin are one of the major sources for the name of children. To study why parents would choose the name of kin for their children, Rossi (1965) conducted semi-structured interviews with 384 women from middle class families that are from the three neighborhoods in the Chicago area.

The results of the interviews can be summarized in three main ways. Firstly, the probability that the children will be named after the kin will be higher if the families have more frequent contacts with their relatives. Secondly, the probability will also be higher if there is a close relationship between the relatives and children. Thirdly, children who are named after their grandparents have a close relationship with grandparents.

From the above three main points, Rossi (1965: 503) concluded that a positive feeling between the parents and kin will increase the incentives for parents to name their children after kin.

Historical View

The choice of a name will be affected by the history of a country. People's preference towards some famous persons will be reflected by the naming pattern.

Franklin (1986) studied the forename of around 750 English peasants in the 14th century to find out their historical attitude. The source of his studies was from a manorial extent, a tax assessment, and a series of manorial court rolls.

From his analysis, names like William, Richard and John who were borne by the kings are popular among males. While, names like Edith, Matilda, Alice and Joan who are borne by queens and ladies are popular among women. Franklin (1986: 25) suggested that reflected the popularity of the kings and queens among the citizens. It also told us the historical view of the peasants in the 14th century.

Similar to all of the above-mentioned researches, the dissertation studies the factors i.e. ethnicity, year of birth and historical event in the choice of Christian names. Furthermore, some tradition and religious beliefs of Catholics will be revealed

Why Do Sociologists Study Names?

From a sociological point of view, the choice of name is a result of culture and social force. Therefore, the naming pattern is a reflection of the culture, social norms and different aspects of society. Sociologists study names as they act like a mirror of the society.

Miller (1929: 585) pointed out that the nature of societal evolution can be deduced from the study of names. People can learn about the evolution of social institutions and the nature of social forces through tracing the folkways built about the name.

For the use of name studies, Zelinsky (1970: 743) provided a more comprehensive explanation. Zelinsky pointed out that the pattern of the choice of given-names is an ideal measure for analyzing spatial and temporal variations in the total cultural system. In his studies of the culture of Eastern American culture, he also suggested that, personal names are sensitive indicators of the essential character of the culture

What Is A Christian Name?

According to Wilson's (1998: 60) studies, there are four categories of Christian names.

The first category is the Theophoric name. These names come from the name of a god and were popular among pagans at first. Kajanto (1963) stated that,

These were either dedicatory, 'derived from the name of the deity with a suffix and bringing out the idea of a human being belonging to, or supposed to enjoy the protection of the deity' or they made direct use of the name of the deity.

Christians continued the pagan practice and took over some of the existing Theophoric names to link them with their own God (Wilson 1998: 60). Theodore, Hermes, Mercurius and Apollonius are typical Theophoric names.

The second category is the name derived from significant religious times. As Pagans would be named after days and months, Christians have also followed this practice (Wilson 1998: 60).

The third category includes names expressing Christian meaning . For example, Felix means evoking the hope for beatitude, Victor means the victory over sin, Vitalis means eternal life (Marrou 1977).

The fourth category is the Biblical name and the name of saints. For children named after a canonized saint, it is hoped that the saint might act as a model and a special protector and advocate before God. (Wilson 1998: 61). Therefore, popular saints' names are usually the name 'great' and universal saints like the Blessed Virgin Mary, St. Joseph, and the Apostles.

The Development Of Christian Names In Western Europe

Christian names were not popular until the central medieval period. Wilson (1998:86) said there was a fairly progressive Christianization of names and that more and more people were given the names of the saints. Before that time, Christian names were found to be very uncommon. Only a small proportion of names was specifically Christian by the end of Roman Empire and it continued to be unpopular in the early medieval time (Wilson 1998: 86).

Wilson (1998: 99) commented that the Christianization of names was Europe-wide and represented a radical departure from the old Germanic name system. And La Ronciere (1990) stated there was a break in the transmission of names within families and ‘a new religious value’ was attached to the name.

According to Wilson’s (1998: 99, 100) analysis, there were two main reasons for the Christianization of names. Firstly, naming was incorporated into the baptism ritual in parts of the Continent in the 11th century and in English dioceses in the 13th century. Therefore, many people obtained their Christian names after they were baptized. Secondly, laymen started to focus their worship on saints. Kempers (1987) said that

Through the exertions of the friars, for laymen to ... worship on saints with whom they felt a social and emotional affinity.

As much effort has been put into the worship of saints by friars, saints have become more important among laymen. Furthermore, veneration and worship of saints have been emphasized and people would like to use the saint names more.

Christian Names In Medieval Times

In medieval times, names of the New Testament saints were the most popular among males of Western Europe. People at that time preferred names like Peter, Andrew, Bartholomew, Matthew and Thomas. Furthermore, the popularity of the name 'Peter' was outstanding in early medieval times (Wilson 1998: 103, 104).

In the central and later medieval periods, the name John displaced Peter from the first position. Wilson (1998: 104) stated that 'across Europe from Warboys in Huntingdonshire to Nuits in Burgundy up to one man in three used this name'. John was popular as it is the name of two great saints, Saint John and John the Baptist. Biget who held similar ideas further explained that

Naming a child John was to place him under the double sign of the Precursor of Christ and the Visionary of the Second Coming, of baptism and resurrection.

Apart from the names of the Apostles, other names like Stephen, Philip, Antonius and Nicholas were also popular among men.

On the other hand, Christian names like Elizabeth (or Isabel), Agnes and Margaret were popular among females in Western Europe at that time.

Agnes was common in France in the tenth and eleventh centuries. It was the third most common female name in Flanders in the twelfth century and in Evreux and Paris around 1300 (Wilson 1998: 105). In England, it was even the commonest Christian name for women in the early thirteenth century. At Warboys, it was the second commonest female name in the first half of the fourteenth century and the commonest female name in the second half (Wilson 1998: 105).

The popularity of the name Margaret was even higher when compared with the name Agnes. This name was ranked the first or second in Forez, Metz, Calais, Nuits and Arras in the fourteenth century and in Paris in the fifteenth century. In England, Margaret ranked in the top five at Warboys throughout the fourteenth and fifteenth centuries (Wilson 1998: 105).

Christian Names In Modern Times (1500-1900)

In modern times, the name of the “great” saints like the Apostles continued to be popular and there was little change in the

name stock. The only change was that names of the Holy Family (The Blessed Mary, Saint Joseph and Jesus) started to be used commonly (Wilson 1998: 192).

Mary was a rare name in medieval times in Italy. In some places, this name was seen as taboo as people thought that no creature was worthy to bear it (Canestrier 1951). However, it started to be popular in the eighteenth century. Wilson (1998: 192) stated that the name Mary was nearly held by all women in Corsica in the later eighteenth century and it was even adopted by Italian men in the sixteenth century. This custom also spread to other countries in the eighteenth and nineteenth centuries.

Joseph (or Giuseppe) was the other main novelty of the Counter-Reformation era (Wilson 1998: 192). It appeared in the sixteenth century in France and became very common in the seventeenth and eighteenth centuries. In Perpignan, this name became the commonest name and 40 percent of males used it in the period 1686-1738 (Wilson 1998: 192).

Unlike Spain, the name Jesus was not commonly used and it appeared as the variant of Savior, like Salvayre, Sauvaire or Sauveur. These names were also common in the Nice region of France (Wilson 1998: 192).

In this dissertation, the factors to choice of the traditional Christian names i.e. names of the holy family and 12 apostles are studied. These traditional names have become popular since the central medieval age.

Hierarchical Order Of Saints

The hierarchical order of saints is a tradition of the Roman Catholic Church. ‘Great’ and ‘universal’ saints who are more important to church history are in a higher place in the hierarchy. While ‘local’ saints who are less famous are in a lower place. Since the hierarchy is merely a tradition, there is no rule showing the order directly and explicitly. Nevertheless, studying the prayers, customs and the formalities could be helpful in understanding it.

The calendar of saints and the litany of saints can be used in revealing the hierarchical order of saints.

Calendar Of Saints

The calendar of saints is a traditional Christian method in organizing a year by linking each day to one or more canonized saints and referring the day as that saint’s feast day. There are three types of feast days and they have different levels of importance:

1. Solemnities
2. Feasts
3. Memorials

Solemnities are the most important and are the principal holy days in the liturgical calendar. They usually commemorate an event in the life of Jesus, the Virgin Mary and other great saints. Easter and Christmas are typical examples. Christians have the obligation to attend the mass and celebration.

Feasts are the second important and it commemorates saints who are not as famous as those mentioned above.

Memorials are the least important and the celebration is either obligatory or optional. They are usually celebrated by some particular Church, region or religious families which are related to that saint.

The importance of the feast day depends on how well known the saints are. Feast days that commemorated saints in the higher level of the hierarchy are more important. They are less important if they commemorate saints that are from the lower level.

A Solemnity which is the most important feast day in the calendar of saints commemorates saints who are in the higher place of the hierarchical order. According to Ordo², there are 17 solemnities with different number of days. These solemnities are made to celebrate:

1. God
2. Our Lady, the Virgin Mary
3. St. Joseph
4. St. John the Baptist
5. St. Peter
6. St. Paul

From the calendar of saints, the Blessed Virgin Mary, St. Joseph, John the Baptist and the Apostles are in the higher position of the hierarchy. However, this has just given us a brief summary of the hierarchical order, details are not provided.

Litany Of Saints

Litany of saints is a sacred prayer of the Roman Catholic Church. It is a prayer for God, Mary, the angels and all the martyrs

² The Ordo is the liturgical calendar of the Roman Catholic Church according to a given calendar year

and saints upon whom Christianity was founded. It is usually sung during the Easter Vigil, baptism ceremony and the liturgy for Holy order. Until now, it is still unknown when and by whom the litany was composed. However, the order in which the Apostles are given, corresponding with that of the Canon of the Mass, proves its antiquity (Walafr. Strabo, "De Reb Eccl.", xxiii)

The litany begins with the call for mercy upon God and this reflects that God is the utmost of everything. After that, the angels and the saints are invoked.

The order of the invocation is as follows:

1. God
2. Our Lady, the Virgin Mary
3. The Angels
4. Patriarchs and Prophets
5. The Apostles and Disciples of the Lord
6. Martyrs
7. Bishops and Doctors of the Church
8. Priests and Religious
9. Laity

The order of invocation has reflected the tradition of the hierarchical order of saints. Saints who are earlier to be invoked are in the higher level of the hierarchy. However, it should be noted that God and Angels are not saints and they are not included in the hierarchy.

From the Litany of Saints, the hierarchical of saints are deduced as follows:

1. Our Lady, the Virgin Mary
2. Patriarchs and Prophets
3. The Apostles and Disciples of the Lord
4. Martyrs
5. Bishops and Doctors of the Church
6. Priests and Religious
7. Laity

The Virgin Mary is the first in the hierarchical order. Followed by her are the Patriarchs and Prophets. Therefore, Joseph and John the Baptist are the second in the hierarchical order. The Apostles and Disciples of the Lord are the third. Hence, the 12 apostles are just below Joseph and John the Baptist in terms of the hierarchical order. After that are the martyrs, bishops and doctors of the church, priests and religious and the laity.

Changes After The Second Vatican Council

In the 1950s, the theological and biblical studies of the Catholic Church started to sway from the neo-scholasticism and biblical literalism. Also, bishops over the world faced different challenges driven by economic, political, social and technological changes. Because of these reasons, Pope John XXIII raised the idea to convene a Council in 1959. The discussion topics of the council included the church itself, the relation to ecumenism and other religions and the relations to the modern world. Over 2,500 men including bishops around the world, superiors' orders participated in the council. It is the largest gathering in the church history. As John Pope John often said, 'It was the time to open the windows of the Church to let in some fresh air', Christians outside the Roman Catholic Church like the Protestant denominations and Eastern Orthodox Churches were invited to send observers to the Council.

The Council named as the Second Ecumenical Council of the Vatican was opened under Pope John XXIII on 11 October, 1962 and closed under Pope Paul VI on 21 November, 1965.

Ebaugh (2009) and Wilde (2007) said that Vatican II is the most significant example of the institutionalized religious change since the Reformation. Wilde (2007: 1) also stated that the Council had 'turned the Church on its head.' For example, the Roman Catholic

Church relinquished its claim to be the one true church, abdicated claim to power in relation to nation-states and reinterpreted its identity from a hierarchical authority to a church as the people of God.

In supporting her argument, Wilde (2007) used cases studies of three specific council proposals which are the (1) Declaration of Religious Freedom, (2) Elevating the status of the Blessed Virgin Mary and (3) Allowing the Catholic laity to use artificial birth control. As the second case study relates to the dissertation, it will be further studied in the following.

According to Wilde (2007: 103), The Blessed Virgin Mary has held a very special place in Catholicism for a long period of time. A Catholic theologian said that, ‘Devotion to Mary the mother of Jesus has been a hallmark of the Catholic tradition.’ (McCarthy 1994). Furthermore, the devotions to Mary also flourished in many places, like Ireland, France, Italy and Latin America.

However, Protestants hold a very different view and see the Catholic devotion to Mary as inappropriate. Although Protestants accept that Mary is the human mother of Jesus and was a Virgin when she conceived him, they think that the Catholic devotion to Mary is too intense and is more than Jesus. Many Protestants felt that ‘Mary had been so elevated to a semi-divine status that either she was given

titles that parallel those given to Christ or she functioned like the Spirit'. The conflict in the devotion to Mary has existed for a very long time and is one of the major differences between Catholicism and Protestantism.

In responding to the divergence, nearly a quarter of bishops in the Council said that they would like to discuss Mary (Wilde 2007: 104). The discussion consisted of three sessions and emphasized the position of Mary in the Church. There are generally two groups of bishops which are the progressives and conservatives. Progressives include bishops who wanted to improve ecumenical relations and would like to minimize the gap between Protestants and Catholics. Therefore, they did not agree with the status of Mary in the Church at that time. On the other hand, Conservatives include bishops who agreed that Mary should be especially respected. And they would like to restrain the change of status of Mary in the church.

The discussion includes topics about the schema of Mary and the Church and the terminology for Mary. In discussing whether Mary should have her own schema, the Conservatives insist that Mary should be treated in her special schema so as to emphasize her special dignity and pre-eminence (Wilde 2007: 105). On the other hand, Progressives proposed that the schema of Mary should be incorporated into the schema of the Church to avoid 'creating new

Marian dogmas’ or ‘encourage false and baseless exaggerations’ (Wilde 2007: 105). The Council finally proceeded to the voting stage and the progressive side won from the conservatives by 40 votes (1,114 to 1,074) (Wilde 2007: 106).

In discussing the terminology used in any conciliar statement on Mary, the progressives succeeded again in keeping the majority of the problematic terms out of it. In reviewing the discussion, Douglas Horton (1964: 26-27), a Protestant observer wrote that:

Instead of calling Mary either ‘The Mother of the Church’ or ‘The Mother of our Lord’, which have come to be slogans of two differing groups within the church, the schema now speaks of Mary as ‘a most-loved mother’. Some had objected to describing Mary as ‘Mediatrix’. Instead of deleting this word, which would have offended one part of the church, the word had been softened by adding the loose appositives, ‘Advocate’, and ‘Helper’. (Wilde 2007: 111)

After the discussions and voting, the proposal to elevate the status of Blessed Virgin Mary failed. Wilde (2007: 114) concluded that the Council resulted in an overall de-accentuation of Mary.

Conclusion Of The Literature Review

By using the cemetery as a data source, this dissertation studies the naming pattern of Catholics. Studies related to cemeteries were first reviewed and it can be seen that there are more studies of the local cemeteries. Most of the local studies concern the history of Hong Kong and some studies from other countries are sociological like this dissertation. After that, the methodologies of gravestone studies were introduced and it is important to the data collection of this research.

As this dissertation studies the names of Catholics, sociological meanings of names were explained. The naming habits of Catholics and the four types of Christian names were introduced afterwards. It gave readers an idea of what is studied.

Finally, religious beliefs of the Catholics were explained by using different prayers, customs and events of the Roman Catholic Church. The idea of Hypotheses I, II and III comes from the tradition of the hierarchical order of saints. Hypotheses IV to VIII emphasize the naming habits of Catholics.

CHAPTER 3

HYPOTHESES AND METHODOLOGY

Eight hypotheses which evaluate the naming pattern of Catholics are introduced and explained. After that, the methodologies adopted to study the naming pattern are elaborated. For the purpose of explanation, equations of the arithmetic comparisons and the Probit analyses are stated. The data collection procedures and the results are described in the final part of this chapter.

Hypotheses

By using the data collected from the gravestones of the St. Michael's Catholics' Cemetery and the Hong Kong Cemetery, it is possible for us

- (1) to test whether the naming pattern of Catholics is consistent with the hierarchical order of saints

- (2) to find out the factors for Catholics to choose traditional Christian names

The evaluation should be conducted with reference to eight refutable hypotheses regarding to the name, nationality, year of birth and death of the deceased.

Hypothesis I: Female Catholic tombs do not have a higher probability of bearing the name Mary than other names;

Hypothesis II: Male Catholic tombs do not have a higher probability of bearing the names Joseph and John than other names;

Hypothesis III: Male Catholic tombs do not have a higher probability of bearing the names of the 12 Apostles than other names after Joseph and John;

Hypothesis IV: The probability of a female Catholic tomb bearing the name Mary will not be higher if the deceased is a Chinese person;

Hypothesis V: The probability of a male Catholic tomb bearing the name Joseph or John or the 12 Apostles will not be higher if the deceased is a Chinese person;

Hypothesis VI: The probability of a female Catholic tomb bearing the name Mary will not be lower if the year of birth of deceased is later;

Hypothesis VII: The probability of a male Catholic tomb bearing the name Joseph or John or the 12 Apostles will not be lower if the year of birth of deceased is later;

Hypothesis VIII: The probability of a female Catholic tomb bearing the name Mary will not be lower if the deceased is born after 1965

Interpretation Of Hypotheses

Hypotheses I, II and III are to test whether the naming pattern of Catholics is consistent with the hierarchical order of saints. They are constructed to see if this tradition is still respected by Catholics.

Hypothesis I is to test whether Mary is the most common name among female Catholics. Since the Blessed Virgin Mary is the first in the hierarchical order of saints, Mary will be the most common name among female Catholics if the naming pattern is consistent with the hierarchical order. Furthermore, the probability that a female Catholic tomb will bear the name Mary will be higher than all other names and Hypothesis I will be refuted.

Hypothesis II is to test whether Joseph and John are the two most common names among male Catholics. Since Saint Joseph and John the Baptist are the second in the hierarchical order, Joseph and John will be the two most common names among male Catholics if the naming pattern is consistent with the hierarchical order. Furthermore, the probability that a male Catholic tomb will bear the name Joseph and John will be higher than all other names and Hypothesis II will be refuted.

If Hypothesis II is refuted, Hypothesis III will test whether the names of the 12 apostles are the third most common name among male Catholics. Since the 12 apostles are the third in the hierarchal order, name of the 12 apostles will be the third most common name among male Catholics if the naming pattern is consistent with the hierarchical order. Furthermore, the probability that a male Catholic tomb will bear the name of the 12 apostles will be higher than all other names except John and Joseph and Hypothesis III will be refuted.

Hypotheses IV, V, VI, VII and VIII are to find out the factors affecting Catholics to choose traditional Christian names i.e. Mary, Joseph, John and the name of the 12 apostles. As discussed in Chapter Two, these names have become very popular among Catholics since medieval times.

Hypotheses IV and V are to test whether there will be a higher probability for Chinese Catholics to use traditional Christian names. The idea that ethnicity will affect the choice of name was studied previously. From the studies in comparing the naming pattern of White and Black in America, Lieberson & Bell (1992: 520) found that the White are more in favor of traditional and historically rooted names and the Black are more in favor of the fashionable names.

Similarly, these hypotheses see whether the ethnicity of Catholics i.e. Chinese will affect the choice of name.

Hypotheses VI and VII are to test whether there will be a lower probability for a Catholic to use traditional Christian names if he/she is born later. As younger Catholics may see traditional Christian names old-fashioned and unattractive, new names will be more popular and the use of these names will become less common over time. These hypotheses assume that deceased were named at the time they were born.

Hypothesis VIII is to test whether there will be a lower probability for a female Catholic to use the name Mary if she was born after the end of the Second Vatican Council. Vatican II was opened in 1962 and closed in 1965. 2540 men including bishops around the world and the superiors of religious order were invited to the Council. They discussed dogma of the Roman Catholic Church and the relation between the church and the modern world. Over the years, researchers have studied the significance of the Second Vatican Council from a sociological perspective. They tried to find out the effect of the council on the customs and religious belief of the Catholics. In 2007, Wilde stated that the Vatican II council caused an overall de-accentuation of Mary. This hypothesis is to test whether the

council will also bring the same effect to female Catholics in the naming process.

Methodology

Sociologists have adopted different methods in studying the naming pattern. They include interviews (Rossi 1965), simple statistical study (Lieberson & Bell 1992, Franklin 1986, Main 1996) and Cramer's V (Lieberson & Bell 1992).

Arithmetic comparison and probit analyses are used here to study the naming pattern. This dissertation is the first one which adopts probit analyses in name studies.

Arithmetic Comparison

Arithmetic comparison of data will be used to evaluate Hypotheses I, II and III. Names from the data sample will be ranked according to their probability of being borne on a tomb. By using this method, the probability of a tomb bearing a particular name can be compared easily.

The probability stated here is calculated by the following equation.

$$\text{Probability of a name to be borne} = \frac{\text{Total number of a particular name}}{\text{Total number of data}} \quad (3.1)$$

This method was also used by Lieberman & Bell (1992)'s studies which concern the choice of first names of the boys and girls in New York. Names are ranked according to the percentage (the number of a particular name over the total number of data) for analysis.

The ranking of the Protestants' name will be used for control and comparison. Yet, it is just a reference and has no effect on the analyses. Furthermore, the study for the males' names will be conducted separately from the study for the females' names.

Probit Analysis

Probit analysis was firstly used by Bliss in 1934 when he carried out a study on the impact of insecticides on the insects. Over the years, probit analysis has been used in many different fields like urban economics (Farrell 1954; Lee and Trost 1978; Goodman and Lawai 1981; Horioka 1988; Bourassa 1995; Chan 1999; Painter 2000), town planning (Lai and Ho 2001a, b, c, d, 2002a, b, c, 2003; Chau and Lai 2004), Sociology (Vanneman 1980; Huber & Spitze 1980; Waite 1980; Bould 1980; Noell 1982; Mare et al. 1984; Ghali & Chesney-Lind 1986; Wielgosz & Carpenter 1987; Bielby & Bielby 1988; Mikesell & Pirog-Good 1990) and sociology of religion (Argue et al. 1999; Cosgel 2001; Oldmixon & Hudson 2008; Uslaner & Lichbach 2009; Martin 2009)

Model Specification³

Linear Probability Model, Probit Model and Logit Model can be used for the analysis. However, as the dependent variable of the Linear Probability Model is not constrained and its value may range from negative infinity to positive infinity, the result will be unfavorable as the dependent variable of the study should be constrained from 0 to 1 (Amemiya 1981, p.1486). Therefore, linear regression model will not be used here. Since the results of Probit and Logit models are more or less the same except in extreme values (Amemiya 1981; Aldrick 1984), we will only use probit models in this dissertation.

In this dissertation, analyses of the male and female names will be conducted separately.

Analysis I will find out the relationship between (a) the probability of a female Catholic using the name “Mary” and (b) the personal information of the female Catholic deceased. Hypothesis IV, VI, and VIII will be evaluated.

Analysis II will find out the relationship between (a) the probability of a male Catholic using the name “Joseph” or “John” or

³ This part is adapted from Yung (2001)

the name of the 12 Apostles and (b) the personal information of the male Catholic deceased. Hypotheses V and VII will be evaluated.

Probit model⁴

Suppose there is an unobserved variable y^* which ranges from $-\infty$ to $+\infty$. This y^* is assumed to be linearly related to the observed independent variables X 's such that

$$y^* = \sum b_j X_j + e \quad (3.2)$$

y^* is then linked to the observed binary variable y (the outcome) by the following equation:

$$y = \begin{cases} 1 & \text{if } y^* > 0 \\ 0 & \text{if } y^* \leq 0 \end{cases} \quad (3.3)$$

Hence, $\Pr(y = 1) = \Pr(y^* > 0)$, and $\Pr(y = 0) = \Pr(y^* \leq 0) = 1 - \Pr(y = 1)$. Since y^* is continuous, the problems of specifying a linear probability model are avoided. We assume that the expected value of the error term is 0, i.e. $E(e | X) = 0$. Since y^* is not observable,

⁴ This part is adapted from Yung (2001)

the variance of the error term e , i.e. $\text{Var}(e \mid X)$, cannot be estimated. We have to assume the distribution of the error term. As “the probability of an event is unaffected by the identifying assumption regarding $\text{Var}(e \mid X)$ ” (Long 1997, p.50), we here assume the error term e follows a normal distribution with mean 0 and variance 1. The cumulative distribution function of a normal distribution with $E(e \mid X) = 0$ and $\text{Var}(e \mid X) = 1$ is

$$\Phi(e) = \int_{-\infty}^e \frac{1}{\sqrt{2\pi}} \exp\left(-\frac{t^2}{2}\right) dt \quad (3.4)$$

$$\Pr(y = 1) = \Pr(y^* > 0) = \Pr(\sum b_j X_j + e > 0) = \Pr(e > -\sum b_j X_j).$$

Since the cumulative normal distribution is symmetrical, $\Pr(e > -\sum b_j X_j) = \Pr(e < \sum b_j X_j)$. Hence,

$$\begin{aligned} & \Pr(y = 1) \\ = & \Pr(e < -\sum b_j X_j) = \Phi(\sum b_j X_j) \\ = & \int_{-\infty}^{\sum b_j X_j} \frac{1}{\sqrt{2\pi}} \exp\left(-\frac{t^2}{2}\right) dt \end{aligned} \quad (3.5)$$

Maximum Likelihood Method⁵

Since y^* is not observable, we cannot use the Ordinary Least Square (OLS) method to estimate the parameter b_j , Maximum Likelihood Method is hence used here.

Since there are only 2 possible outcomes : either bearing the name –Mary, Joseph or anyone of the 12 apostles ($y = 1$) or not ($y = 0$), and since all the personal information of the descents are independent to each other, we can apply the binomial distribution to find the likelihood of happening of a particular event:

$$L(b_j) = \prod_{y=1} \Pr(y_i = 1) \prod_{y=0} [1 - \Pr(y_i = 1)] \quad (3.6)$$

where i denotes the i^{th} descent.

We may also obtain the Log Likelihood equation by taking logs on both side of the equation (3.6)

⁵ This part is adapted from Yung (2001)

As we can never know what the exact values of b_j are, Maximum Likelihood is used to find the set of values of b_j that can maximize the probability (likelihood) of a particular observation.

Since it can be shown that Log Likelihood equation is globally concave, i.e., there will be only 1 maximum, we can use iterative procedure to converge our estimations to the single maximum (Amemiya 1981). The iteration method starts with an initial value, attempts to improve on this guess by adding a vector of adjustments, and ends until there is convergence (Long 1997).

The Variables (Analysis I)

The Dependent Variables (Mary)

This is the choice of name by female Catholics. From the data sample, female deceased used different names, like Rose, Elizabeth, Anna, Lucia etc. In the analysis, it is a dummy variable that equals 1 if the Christian name of the deceased is Mary and 0 otherwise. Mary is the name of the Blessed Virgin Mary and is a traditional and common Christian name.

The Independent Variables

Chinese Ethnicity (CHINESE)

The deceased in the St. Michael's Catholic Cemetery could be Chinese, Spanish, British, Irish, and Portuguese etc. To study the effect of Chinese ethnicity to the use of the name Mary, the data is sorted to two groups i.e., the Chinese and non-Chinese.

The dummy variable will equal 1 if the deceased is a Chinese person and 0 otherwise

Year of birth (BIRTH)

A control variable (BIRTH) will be used to study the relationship between the year of birth of the deceased and the use of the female name Mary. The variable represents the year of birth of the deceased.

Year of death (DEATH)

DEATH represents the year of death of the deceased. It is a control variable to study the relationship between the year of death of the deceased and the use of the name Mary.

Second Vatican Council (VATICAN2)

A dummy variable (VATICAN2) is to study the use of the name Mary before and after the second Vatican council. As the council ended in 1965, it will equal 1 if the deceased was born after 1965 and 0 otherwise.

The Variables (Analysis II)

The Dependent Variable (SAINTS)

This is the choice of name by male Catholics. From the data sample, male deceased used different names, like Peter, William, Thomas and John etc. In the analysis, it is a dummy variable that equals 1 if the Christian name of the deceased is any of the following

1. Joseph
2. John
3. Peter
4. Andrew
5. James
6. Philip
7. Bartholomew
8. Matthew
9. Thomas
10. Thaddeus
11. Simon
12. Matthias

and 0 if the name is not stated above. These names belong to Saint Joseph, John the Baptist and the 12 Apostles and are the traditional and common Christian names.

The Independent Variables

Chinese Ethnicity (CHINESE)

The deceased in the St. Michael's Catholic Cemetery could be Chinese, Spanish, British, Irish, and Portuguese etc. To study the effect of Chinese ethnicity in the use of the name of Joseph or John or the 12 apostles, data will be sorted to two groups i.e., the Chinese and non-Chinese.

The dummy variable will be 1 if the deceased is a Chinese person and 0 otherwise.

Year of birth (BIRTH)

A control variable (BIRTH) will be used to study the relationship between the year of birth of the deceased and the use of the 12 male names stated above. The variable represents the year of birth of the deceased.

Year of death (DEATH)

DEATH represents the year of death of the deceased. It is a control variable to study the relationship between the year of death of the deceased and the use of the 12 male names stated above.

Second Vatican Council (VATICAN2)

A dummy variable (VATICAN2) is to study the use of the 12 names stated above before and after the second Vatican council. As the council ended in 1965, it will equal 1 if the deceased was born after 1965 and 0 otherwise.

Gravestone Study

Gravestone studies were conducted in the Saint Michael's Catholic Cemetery and the Hong Kong Cemetery. The data was obtained by directly copying the inscription on the gravestones.

The Hong Kong Cemetery has approximately 12,000 tombs dating from the year 1845 and the Saint Michael's Catholic Cemetery had 15,000 tombs dating from 1858. In both cemeteries, earth burial graves were arranged by section. The former has 35 sections and the latter 14 sections (See fig 3.1 and 3.2).

1,627 names and personal details of Catholic deceased (including Chinese (65%) and European (35%)) were collected from 4 sections (sections 1, 2, 3-I, 3-II, 4-I and 4-II) and ossaria on the flat ground of the Saint Michael's Catholic Cemetery from June 2009 to March 2010.

For control and comparison purpose, a sample of tombs in the Hong Kong Cemetery was also surveyed. A total of 1,118 names of Protestant deceased were collected from 13 sections (sections 7, 9, 10, 11, 12, 13, 15, 16A, 16B, 16D, 17A, 17B, 18, 19, 20, 20A, 21, 21A) in the Hong Kong Cemetery in the same period for this study.

The years of birth of the deceased in the data sample span over 2 centuries, from 1771 to 1988, while the range of the years of death is from 1840 to 2009.

Five categories of human data as inscribed on the gravestones were recorded. They were the names, sexes, nationalities, years of birth and years of death.

Photographs 12 to 18 show the typical tombs found on the two cemeteries.

CHAPTER 4

EMPIRICAL RESULTS AND INTERPRETATION

To evaluate the eight hypotheses, two methodologies which are the arithmetic comparison and probit analyses are adopted. Since the analyses of male names and female names will be separated in the two methodologies, there are a total of four analyses in this chapter.

- (1) Arithmetic Comparison of female names
- (2) Arithmetic Comparison of male names
- (3) Probit Analysis of female names (Analysis 1)
- (4) Probit Analysis of male names (Analysis 2)

After the analyses, the results are explained to support the theory proposed in this dissertation.

Arithmetic Comparison Of Female Names

The following table shows the 10 most common female names borne by the tombs of Catholics and Protestants. The names are ranked according to the probability that it appears on the tomb.

Table 4.1 Ten most popularly adopted female Christian names as found in Saint Michael's Catholic Cemetery and Hong Kong Cemeteries

Catholic			Protestant		
	frequency	Probability (%)		frequency	Probability (%)
Mary	367	43.6	Elizabeth	14	6.4
Anna	60	7.1	Anna	12	5.5
Theresa	33	3.9	Mary	11	5.0
Rose	31	3.7	Alice	8	3.7
Margaret	25	3.0	Margaret	8	3.7
Lucia	19	2.3	Katherine	6	2.7
Katherine	17	2.0	Dorothy	5	2.3
Alice	13	1.5	Cecilia	4	1.8
Elizabeth	13	1.5	Rose	4	1.8
Monica	10	1.2	Lilian	4	1.8
Sub-Total	588	69.9	Sub-Total	76	34.7
Total	841		Total	219	

Mary is the most common name among female Catholics. 43.6 % of the female Catholic tombs bear this name. Anna (7.1%), Theresa (3.9%), Rose (3.7%) and Margaret (3.0%) are the names after Mary in terms of probability.

On the other hand, Elizabeth is the most common name for female Protestants. 6.4% of the female Protestant tombs bear this name. Anna (5.5%), Mary (5.0%), Alice (3.7%) and Margaret (3.7%) are the names after Elizabeth in terms of the probability.

There is also an overlapping between the 10 most common names. Mary, the most common name of female Catholics is the third most common name of Protestants. Elizabeth, the most common name of Protestants is ranked the ninth in the Catholic side. Anna, Rose, Margaret, Katherine and Alice can all be seen from both side of the chart.

Arithmetic Comparison Of Male Names

The following table shows the 10 most common male names borne by tombs of Catholics and Protestants. The names are ranked according to the probability that it appears on the tomb.

Table 4.2 Ten most popularly adopted male Christian names as found in Saint Michael's Catholic Cemetery and Hong Kong Cemeteries

Catholic			Protestant		
	Frequency	Probability (%)		Frequency	Probability (%)
Joseph	210	26.7	John	76	8.5
John	72	9.2	William	73	8.1
Peter	62	7.9	James	66	7.3
Anthony	47	6.0	George	53	5.9
Francis	39	5.0	Charles	43	4.8
Paul	29	3.7	Henry	34	3.8
Charles	21	2.7	Frederick	31	3.4
Louis	19	2.4	Robert	27	3.0
William	14	1.8	Edward	26	2.9
Albert	12	1.5	Thomas	23	2.6
Sub-Total	525	66.8	Sub-Total	452	50.3
Total	786		Total	899	

Joseph is the most common name for male Catholics. 26.7 % of the male Catholic tombs bear this name. John is the second most common name and 9.2% of the Catholic tombs bear this name. Peter which is the name of one of the 12 Apostles comes third. 7.9% of the tombs bear this name

On the other hand, John is the most common for male Protestants. 8.5% of the male Protestant tombs bear this name. William (8.1%), James (7.3%), George (5.9%) and Charles (4.8%) are the names after John in terms of the probability.

Unlike the naming pattern of the female, the preference of male names is very different between two religions. Joseph and Peter ranked as the first and third in Catholic are not found in the Protestant side. And only 3 names can be found from both sides.

Interpretation Of Result (Arithmetic Comparison)

From the arithmetic comparison of female names, the probability that a female Catholic tomb will bear the name Mary is the highest (43.6%) compared with other names. Therefore, Hypothesis I is refuted.

Mary which is the most common name for female Catholics has an outstanding popularity by comparison. Mary leads the second most common name Anna by 36.5%. And the probability of a tomb bearing any name after Mary is lower than 10%.

The outstanding popularity of Mary can be discovered when comparing to the naming pattern of female Protestants. Only 6.4% of the female Protestant tombs bear the most common name Elizabeth and the figure is also very low when compared with Mary (43.6%). In addition, Elizabeth only leads the second common name Anna by 0.9%. The probability of the name to be borne decreases gradually. Anna leads Mary by 0.5%, Mary leads Alice and Margaret by 1.3% and Alice leads Katherine by 1%.

From the statistical study of male names, the probability that a male Catholic tomb will bear the name Joseph (26.7%) and John (9.2%) is higher than all other male names. Therefore, Hypothesis II is refuted.

Similar to the female names, the popularity of the most common is outstanding. Joseph leads the second common name John by 17.5%. And the probability that a male Catholic tomb will bear any name after Joseph is not higher than 10.0%.

The outstanding popularity can be seen by comparing the naming pattern with male Protestants. Only 8.5% of the male Protestant tombs bear the most common name John and the figure is very low compared with Joseph (26.7%). In addition, John only leads the next popular name William by 0.4%. The probability of a name to be borne decreases gradually. William leads James by 0.8%, James leads George by 1.4% and George leads Charles by 1.1%.

The probability that a male Catholic tomb will bear the name Peter (7.9%) which is the name of one of the 12 apostles is higher than all other male names except Joseph and John. Hence, Hypothesis III is refuted.

As three of the hypotheses concerning the hierarchical order of saints are refuted, the naming pattern of the Catholics is consistent with the order. It is because

1. While the Blessed Virgin Mary is the first in the hierarchical order of saints, Mary is the most common name among female Catholics
2. While the Patriarchs and Prophet (St. Joseph and John the Baptist) are the second in the hierarchical order, Joseph and John are the two most common names among male Catholics.
3. While the Apostles are the third in the hierarchical order, Peter which is the name of an Apostle is the third most common name among male Catholics.

From the result, the hierarchical order of saints is still respected by Catholics.

The Probit Analysis (Analysis 1)

Analysis 1 studies the naming pattern of female Catholics. It studies the relationship between the use of the name Mary and the characteristics of the personal information of female Catholic deceased. When all the independent variables (CHINESE, BIRTH, DEATH, VATICAN2) are put into the equation, the results in Table 4.3 are obtained.

Table 4.3 Equation 1 of Analysis 1

Dependent Variable: MARY				
Method: ML - Binary Probit				
Date: 03/08/10 Time: 00:16				
Sample(adjusted): 6 841				
Included observations: 752				
Excluded observations: 84 after adjusting endpoints				
Convergence achieved after 10 iterations				
Covariance matrix computed using second derivatives				
Variable	Coefficient	Std. Error	z-Statistic	Prob.
C	19.61283	4.359720	4.498646	0.0000
CHINESE	0.646405	0.108629	5.950573	0.0000
BIRTH	-0.008958	0.002466	-3.632946	0.0003
DEATH	-0.001637	0.002387	-0.685889	0.4928
VATICAN2	-0.619165	0.561371	-1.102952	0.2700
Mean dependent var	0.436170	S.D. dependent var	0.496239

Restr. log likelihood	-515.1023	Avg. log likelihood	-0.644648	
LR statistic (4 df)	60.65401	McFadden R-squared	0.058876	
Probability(LR stat)	2.11E-12			
Obs with Dep=0	424	Total obs	752	
Obs with Dep=1	328			

A total of 84 observations out of 841 have been automatically excluded due to the incomplete information.

From the result, the variable CHINESE has a positive coefficient (+ 0.646405) and is significant at a 1% level.

The variable BIRTH has a negative coefficient (-0.008959) and is significant at 1% level.

However, the other two variables are insignificant (p-value of DEATH is 0.4928 and VATICAN2 is 0.2700) because they are highly co-related with the variable BIRTH. According to Appendix I which shows the statistical correlation of different independent variables, the correlation of the variables (BIRTH and DEATH) is 0.584 and the variables (BIRTH and VATICAN2) is 0.389.

Therefore, BIRTH must be taken off when investigating the properties of DEATH and VATICAN2.

When BIRTH was excluded, the significance of the other variables improved a lot. Table 4.4 shows the result of putting the independent variables (CHINESE, DEATH and VATICAN2) into the equation.

Table 4.4 Equation 2 of Analysis 1

Probability(LR stat)	3.10E-10			
Obs with Dep=0	424	Total obs	752	
Obs with Dep=1	328			

The variable DEATH has a negative coefficient (-0.006540) and is significant at 1% level now (p-value improved from 0.4928 to 0.0009).

The variable VATICAN2 has a negative coefficient (-1.200740) and is significance at 5% level now (p-value improved from 0.2700 to 0.0247).

The coefficient of CHINESE remained positive and its significance still kept at 1% level.

As BIRTH is highly co-related to the two other variables (DEATH and VATICAN2), a test will be conducted in the absence of these two variables.

Table 4.5 Equation 3 of Analysis 1

Obs with Dep=1	328			

The result is consistent with the result of Equation 1. The coefficient of CHINESE remains positive and the coefficient of BIRTH remains negative. P-value of these variables (BIRTH and CHINESE) remains at 1% level.

The Probit Analysis (Analysis 2)

Analysis 2 studies the naming pattern of male Catholics. It studies the relationship between the use of the name of Joseph, John or the 12 Apostles and the characteristics of the personal information of male Catholic deceased. When all the four independent variables (CHINESE, BIRTH, DEATH, VATICAN2) are put into the equation, the results in Table 4.6 are obtained.

Table 4.6 Equation 1 of Analysis 2

Dependent Variable: SAINTS

Obs with Dep=0	378	Total obs	731	
Obs with Dep=1	353			

A total of 55 observations out of 786 have been automatically excluded due to the incomplete information.

Apart from CHINESE which is significant at 1% level, all other variables are insignificant (p-value of BIRTH is 0.0616, DEATH is 0.7960 and VATICAN2 is 0.2021). It is because they are highly correlated with each other. According to Appendix II, the correlation of the variables (BIRTH and DEATH) is 0.642 and the variables (BIRTH and VATICAN2) is 0.349.

As the correlation of the variables BIRTH and DEATH is too high, DEATH will be excluded.

When DEATH was excluded, the significance of the variable BIRTH improved a lot.

From the result, the variable CHINESE has a positive coefficient (+1.052111) and is significant at 1% level.

The variable BIRTH has a negative coefficient (-0.004249) and is significant at 5% level.

Interpretation Of Results (Probit Analyses)

CHINESE

From the probit analysis of female names (Analysis 1), the variable CHINESE has a positive coefficient and is significant at 1% level. This means that the probability of a female Catholic tomb bearing the name Mary will be higher if the deceased is a Chinese person. Hypothesis IV is refuted.

From the probit analysis of male names (Analysis 2), the variable CHINESE also has a positive coefficient and is significant at 1% level. This means that the probability of a male Catholic tomb bearing the name of Joseph or John or the 12 Apostles will be higher if the deceased is a Chinese person. Hypothesis V is refuted.

Since Hypotheses IV and V are refuted, the use of the traditional Christian names is more common among Chinese Catholics.

This is because Chinese have little understanding towards Catholicism when compared with Europeans. Unlike European countries like Spain, Italy, Ireland and Portugal where Catholicism is the state-religion for several hundreds of years, the history of Catholicism is very short in Hong Kong. Until the first missionaries came to Hong Kong in the mid 19th century, it was a completely new

religion to the Chinese and they know very little about it. As the history of Catholicism is not very long in Hong Kong, it is not as popular as the local religions and there are fewer ways for disciples to learn about it. Therefore, disciples' understanding of the religions will be shallower in general. Chinese Catholics in Hong Kong may only be familiar with great and universal saints like the Blessed Virgin Mary, John the Baptist and the Apostles. Hence, traditional Christian names will be more popular among them.

BIRTH

From the probit analysis of female names (Analysis 1), the variable BIRTH has a negative coefficient and is significant at 1% level. This means that the probability of a female Catholic tomb bearing the name Mary will be lower if the year of birth of the deceased is later. Hypothesis VI is refuted.

From the probit analysis of male names (Analysis 2), the variable BIRTH also has a negative coefficient and is significant at 5% level. This means that the probability of a male Catholic tomb bearing the name of Joseph or John or the 12 Apostles will be lower if the year of birth of the deceased is later. Hypothesis VII is refuted.

Since Hypotheses VI and VII are refuted, the use of the traditional Christian names will become less common when time passes.

The phenomenon can be explained by the psychological effect that young people are reluctant to use the old and traditional names. As the traditional names were commonly used in the old days, young people may find them old fashioned. With a wish to discard the old beliefs, people intend to search for new and fashionable names. Therefore, the uses of traditional names have decreased over time.

VATICAN2

From the probit analysis of female names (Analysis 1), the variable VATICAN2 has a negative coefficient and is significant at 5% level. This means that the probability of a female Catholic tomb bearing the name Mary will be lower if the deceased was born after 1965. Hypothesis VIII is refuted.

Since Hypothesis VIII is refuted, the use of the name Mary has become less common after the end of the Second Vatican Council. Furthermore, it is consistent with Wilde's (2007) idea that the council resulted in an overall de-accentuation of Mary.

The Vatican II which was held in the 1960s discussed the topic about the devotion to Blessed Virgin Mary. At that time, the Blessed Virgin Mary has held a very special place in Catholicism and the devotion to Mary has been a hallmark of the Catholic tradition (Wilde 2007: 103). However, the immense respect for Mary has aroused criticism especially from Protestants. In discussing this topic, two groups of bishops were holding two totally different views. The progressives did not agree with the status of Mary in the Church and would like to diminish the devotion to Mary. On the other hand, the conservatives agreed that Mary should be especially respected and would like to restrain the change of the status of Mary in the Church. After a series of debates and voting, the progressive side won and the devotion to Mary was agreed to be diminished.

As there is a decrease in the veneration to the Blessed Virgin Mary after the council in 1965, it can be expected that the use of the name Mary will become less common. The result does not refute what Wilde (2007)'s said that there is an overall de-accentuation of Mary

CHAPTER 5

CONCLUSION

By using the data obtained from the Saint Michael's Catholic Cemetery and the Hong Kong Cemetery, the naming habits of Catholics have been studied. The discovery has significant implications for the sociology of religion and was original because grave stone data have not been used this way using statistical techniques that are commonly used in real estate research. Grave stones are real estate and at the same time a source of reliable public information.

The research began with data collection in the St. Michael's Catholic Cemetery and Hong Kong Cemetery. Names and details of 1,627 Catholic deceased were collected from gravestones of the 4 sections of St. Michael's Catholic Cemetery. And 1,118 names of Protestant deceased were collected from 13 sections of the Hong Kong Cemetery.

Result of the arithmetic comparison shows that Catholic naming pattern is consistent with the hierarchical order of saints. It can be deduced that the hierarchical order of saints is still respected by the Catholics.

The probit analyses studied the factors affecting Catholics to choose the traditional Christian name i.e. Mary, Joseph, John and the names of the 12 apostles. Results show that the Chinese Ethnicity, year of birth of the deceased and the second Vatican council possess significant effects on the choice of traditional names.

By studying the names of Catholics which are also the name of the special form of real estate, the traditions and religious belief of Catholics are revealed. This dissertation shows that names are effective means to understand the social aspect of a community. Furthermore, it has demonstrated that the cemetery could be a useful information source.

Limitations And Further Studies

Due to the constraint of time and human resources, the research was based on a sample of just two cemeteries (St. Michael's Catholic Cemetery and the Hong Kong Cemetery) in Hong Kong. But there are altogether four Catholic and two Protestant Cemeteries in Hong Kong. Furthermore, there should be Christians buried in the Chinese Permanent Cemeteries which are open to any religious professions. As the two cemeteries were opened in the mid-19th century and were full in the mid 20th century, the collected data are mostly from deceased who were born in the early 19th century to early 20th century. The amount of data of the deceased who were born in the late 20th century

could be improved by collecting the data from the newer Catholic cemeteries e.g. St. Raphael's Catholic Cemetery in Hong Kong.
