Tagging One Million Volumes in a 2.0 Environment: Lessons and Experiences of Implementing RFID Technology at the Main Library, The University of Hong Kong

Ruth Wong & Y.C. Wan The University of Hong Kong Libraries

HKUL 50th Anniversary Conference, Hong Kong Central Library, November 4, 2008

This Presentation

- Focus on the tagging exercise how we planned and managed the project.
- The exercise is now 99% complete. This has enabled us to update information we provided in our paper one month ago.

Agenda

- Overview of the HKU Main Library RFID project
- Scope of the tagging project
- Preparation work before starting to tag
- The tagging exercise
- Lessons and experiences
- Q & A

RFID Project Overview

A HKUL Working Group recommended to the Library Senior Management to adopt RFID technology in library operations in 2004.

- The Senior Management decided to proceed with the tendering exercise in 2006.
- The first product demonstration was held in November 2006

It was decided to awarded the contract to ETI Consulting Limited (ETIC) in late 2007

- The library implementation team comprises Peter Sidorko (chair), Y.C. Wan, David Palmer, Thomas Hung and Ruth Wong
- Tagging exercise an Access
 Services Department project

Tagging Project Scope

- Main Library open stack books and bound journals
- Fung Ping Shan Library open stack books and bound journals
- > 1 million volumes, or some 80% of the open stack collection of the entire library system

Not Included

- AV & Reserve Collection
- Special Collections
- Current periodical issues

Limitations

- Space the Main Library was full before the project started
- Time changing over to RFID before 9/2008
- Staff very busy, cannot afford to deploy existing staff to do the tagging
- Vendor limited knowledge about how the Main Library works
- Workflow mobile tagging was not possible
- RFID is new to everyone in the library

Preparations

- Ease of space
- Purchase of tags
- Determine what data will be stored in the tag
- Test of tagging workflow
- Devise tagging software incorporating the chosen workflow

Ease of space

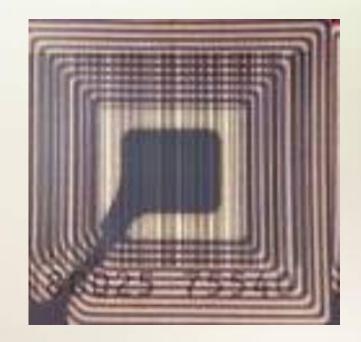

- less used materials moved to remote store
- vigorous criteria used
- 63,000 volumes relegated in two months
- done by three temporary contract staff

Purchase of tags

Based on existing size of collection of the Main Library and projected growth of newly purchased materials 1.3 million RFID tags of high frequency is

purchased

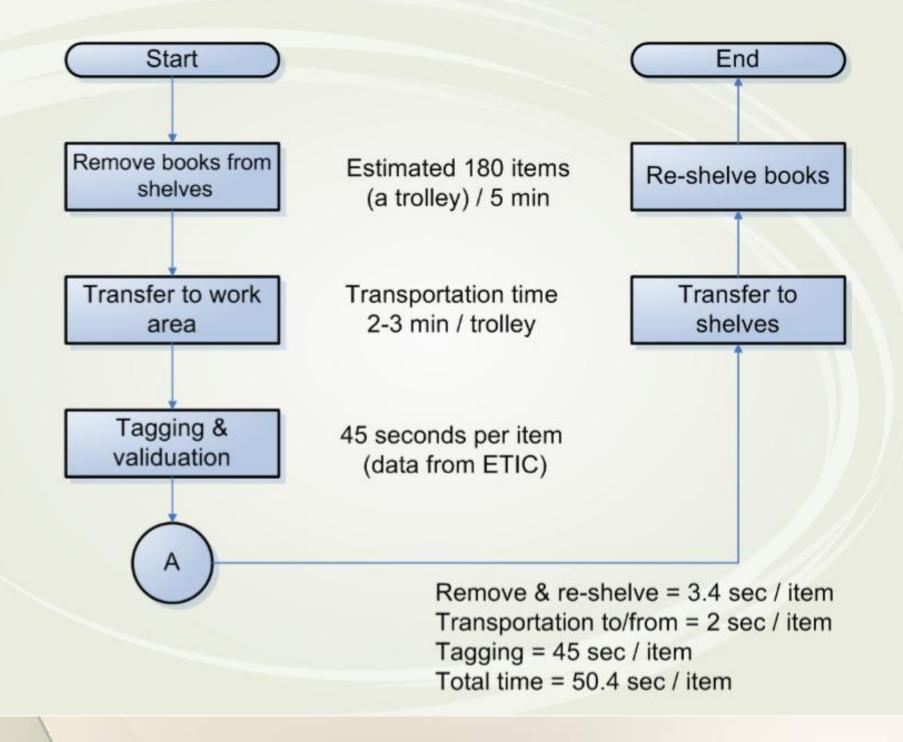

Data stored in the RFID tag

 Privacy issue Ownership & Primary Item ID (barcode) only

The University of Hong Kong Libraries

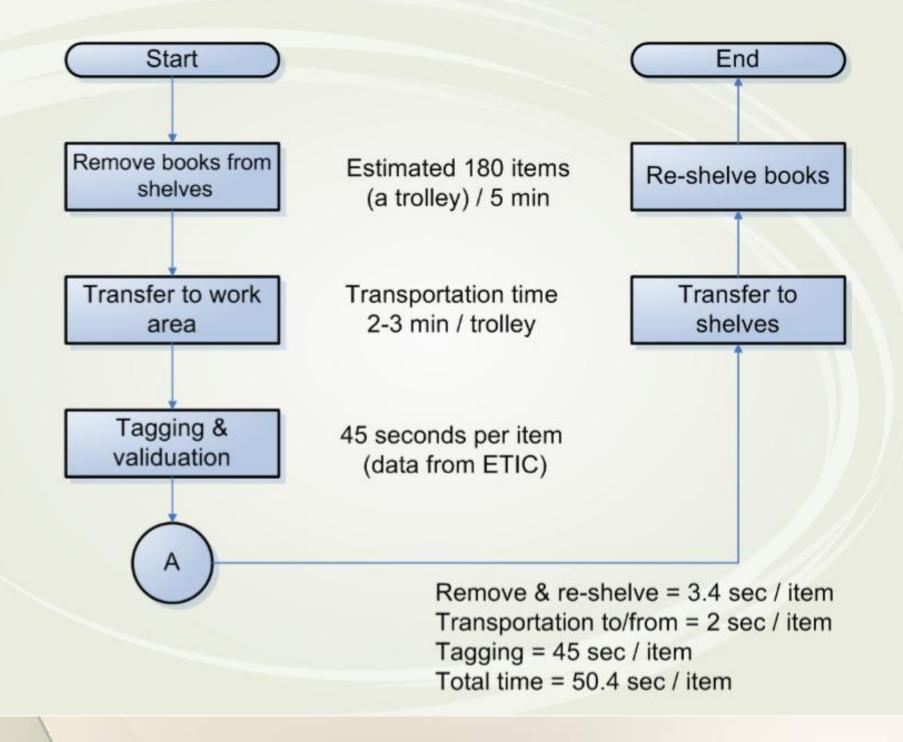

Test of tagging workflow

Location of workstations

Test of tagging workflow

Devise tagging software incorporating the chosen workflow

- Original procedures Write
 - Scan barcode
 - Retrieve item details
 - Write barcode to RFID tag
 - Validate
 - Scan barcode
 - Retrieve item details
 - Check details from screen against details on physical items
 - Press enter to lock data

Devise tagging software incorporating the chosen workflow

2 steps

- Revised procedures Write, check and validate data in one step
 - Scan barcode
 - Retrieve item details
 - Check details from screen against details on physical items; and

Press enter to lock data

9.2 seconds per item are saved

Tagging resources Equipment & furniture

Conversion workstations

- 1 PC with LCD monitor,
- 1 RFID antenna,
- 1 RFID reader,
- 1 barcode scanner and
- 1 RFID tag dispenser
- Trolleys

Desks, chairs and partitions

Tagging resources Equipment & furniture

Tagging resources

Temporary staff

Supervisors x 3

- Relieve workload from regular library staff from circulation
- Relegate less used books from the Main Library to remote storage to prevent from frequent shifting of books
- Solve simple problems on the spot
- Provide day to day supervisions to tagging helpers

 One is a retired staff who had been working for the Main Library for more than 30 years

 Two had been participated in relegation and LC re-labeling projects

 Started one month before the tagging helpers

- To familiarize themselves with the tagging workflow and;
- To help relegate less used materials to a remote store

- Briefing on standardizing sup patterns
 All three understand that they have to
 - Ensure all helpers followed uniform procedures;
 - Ensure tagged items are re-shelved within 3 hours;
 - Ensure no untagged books were left on trolleys overnight;

Briefing on standardizing support
 patterns

 Ensure a constant productivity of tagged items;
 Ensure sufficient manpower on all floors even if some helpers are sick or on leaves;
 Ensure simple problems were solved immediately;

Briefing on standardizing su patterns

Ensure complicated problems were reported to the Access Services Department;
Keep daily statistics on outputs and used RFID tags.

Tagging resources

Temporary staff
Tagging helpers x 22

- Shelving and tagging
- Most of them are students from universities, community colleges or secondary schools.

Shelves are sequentially numbered

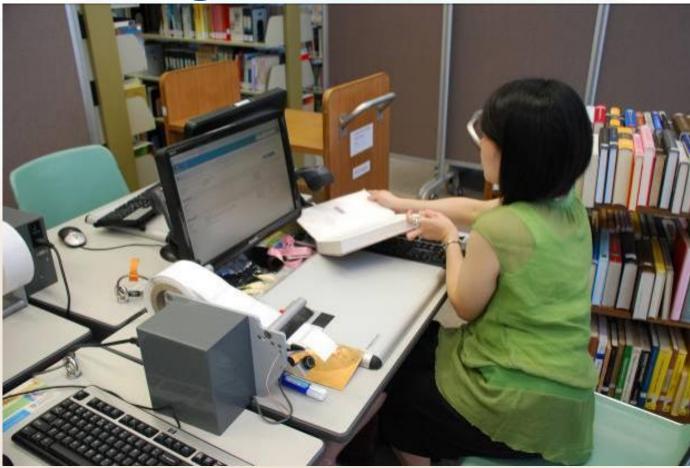

Trolleys are marked "start" and "end" and a co-ordinate chart in the front

 Helpers marked an arrow on the exact place on shelf where the last book on the trolley was located

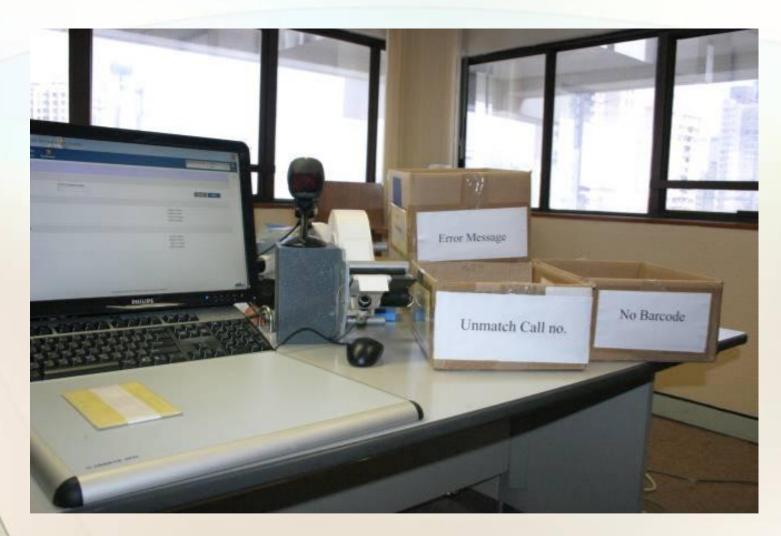

Take and tag one book at a time

Verify the call number only

• Marked boxes for problematic books

Documentations of tagging procedures and self-devised tools are given

Tagging exercise kick-off

2 May 2008
22 helpers reported for duty in two batches

Tagging exercise kick-off

All staff received half day briefing & training on

- Project missions and expectations;

- Tag's positions, tagging procedures and shelving safety.

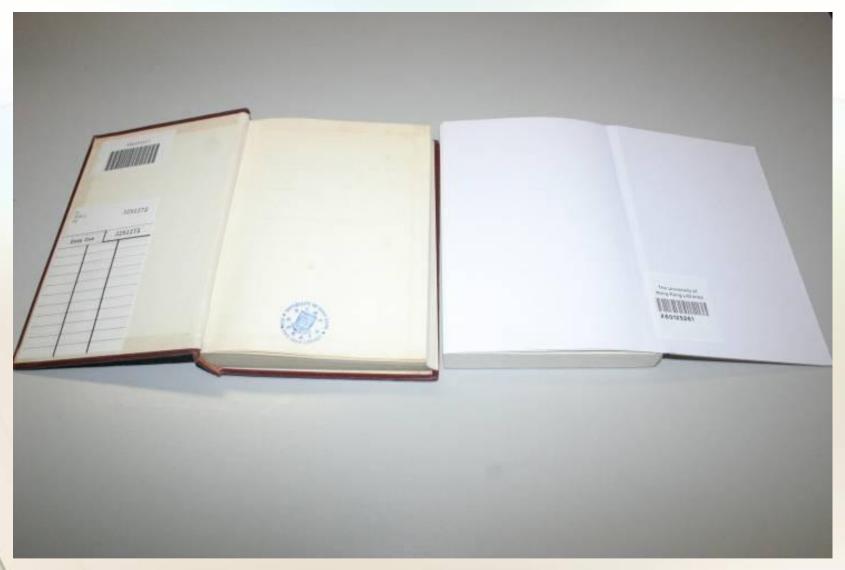

Projected vs. actual productivities

 Innopac upgrade

At Last - 28/8/2008

800,000 items were tagged
RFID circulation service was launched

Lessons & experiences

- Planning and preparations is important
- Right time & right support
- Roles of supervisors
- Temp staff?
- Communications
- Just do it!

LOOKING BACK, MOVING FORWARD: ASIAN LIBRARIES IN THE WORLD OF INFORMATION

4th - 5th November, 2008 The Hong Kong Central Library

Thank you Q & A
