# **CEH Code List For Recording The Macroinvertebrates In Fresh Water In The British Isles**

**October 2011**

Report compiled by Cynthia Davies and François Edwards

## **Purpose**

The purpose of this Coded List is to provide a standard set of names and identifying codes for freshwater macroinvertebrates in the British Isles. These codes are used in the CEH databases and by the water industry and academic and commercial organisations. It is intended that, by making the list as widely available as possible, the ease of data exchange throughout the aquatic science community can be improved.

The list includes full listings of the aquatic invertebrates living in, or closely associated with, freshwaters in the British Isles. The list includes taxa that have historically been found in Britain but which have become extinct in recent times. Also included are names and codes for 'artificial' taxa (aggregates of taxa which are difficult to split) and for composite families used in calculation of certain water quality indices such as BMWP and AWIC scores.

## **Current status**

The list has evolved from the checklist\* produced originally by Peter Maitland (then of the Institute of Terrestrial Ecology) (Maitland, 1977) and subsequently revised by Mike Furse (Centre for Ecology & Hydrology), Ian McDonald (Thames Water Authority) and Bob Abel (Department of the Environment). That list was subject to regular revisions with financial support from the Environment Agency.

The current list differs from the original Checklist in that codes and names are retained in the list even if the taxon is no longer found in Britain. This will enable historical records to be maintained. Vertebrates have been excluded from the list.

The current list includes a full list of current names and codes including the artificial taxa (Annex I). There is a separate list of the artificial taxa (Annex II) and a complete cross-reference of changes from the last published version of the Coded Checklist 28/10/2008 (Annex III). All changes since that date have been allocated the date of publication of this list.

The current update includes a complete revision of the Cladocera (with the assistance of the Cladocera Interest Group (<http://www.boxvalley.co.uk/nature/cladocera/cindex.asp>), the Coleoptera and the Hirudinea.

It is important that users document which version of the checklist has been used in their recording.

## Format

The coding system used by this checklist is a hierarchical alphanumeric code of eight characters that are subdivided into pairs. The first pair represents a major taxonomic level (e.g. phylum, class, order etc.) which is variable from group to group, the second pair normally represents family (but may be used to represent subfamily / tribe), and the final four represent genus, subgenus and species. Each taxon also has the code of the next higher level or 'parent' defined. Alphanumeric codes are used for artificial taxa and where the number of names exceeds the number of characters allocated to a specified taxonomic level.

### Annex I Current Code List. Descriptions of column headers:

Field Name	Description
CODE	Unique eight character code that identifies the taxon
HIGHER TAXONOMIC LEVELS GENUS (SUBGENUS)	Higher level name of the taxon
SPECIES NAME	Species name of the taxon
AUTHORITY	The authority for the name of the organism
EXTINCT OR ARTIFICIAL	A note concerning the status of the taxon
"PARENT CODE"	Code of the next higher taxonomic level in the list

### Annex II Artificial taxa. Descriptions of column headers:

Field Name	Description
CODE	Code of the artificial taxon
GROUP NAME	Name of the artificial taxon
NOTES	Components of the artificial taxon

### Annex II Changes since 2008. Descriptions of column headers:

Field Name	Description
OLD CODE	Name in the column headed 'Current new code' in the 28/10/2008 version
OLD NAME	Name of the taxon in the 28/10/2008 version (including Authority)
NEW NAME	Name of the taxon in the October 2011 list
NEW CODE	Code of the taxon in the October 2011 list
CHANGED	Changes made between 28/10/2008 and 30/09/2011

## Database

The report has been derived from a database which collates previous versions of the Maitland Furse Checklist. Each combination of name (including Authorship) and code has been allocated a unique reference number (TAXNO) which will enable tracking of the name in use when data are added to the CEH database.

Valid names and codes are tagged as Valid = V; obsolete names and codes are tagged as Valid = O.

The date the name/code combination was added and the date of any amendment are included. Some dates are nominal where the information was obscure or missing in the spreadsheets. Authorship dates were added to the spreadsheets by version 6, dated 01/11/2005 but no note was made at the time. This date has been used as the default where the authorship only appears in different forms.

The column Status indicates the validity of a name and code and the type of change made on the date indicated.

Status	Explanation
code	
C	Name and code valid and current
E	Name and code valid but extinct in Britain
R	Recoded or renamed
S	Taxon synonymised
T	Typographical mistake corrected or authorship amended
M	Original Maitland code
D	Taxon invalid and deleted
MD	Taxon invalid and deleted (Maitland code)
