EAU GALLIE, ON THE EAST COAST OF FLORIDA

In LOCATION—on the East Coast, just midway between Jacksonville and Miami—On the west bank of the fast-flowing Indian River, which is now and ever will make its width at this point. A bank of pure and sparkling salt water, separated from the Atlantic Ocean by a narrow strip of land, and retaining its wavy, fluctuating. The water is frequent on high, dry land, with no less or more rocks here. The water in the Indian River is deep at this point from shore to shore. The shore line is composed of essentially level, sandy soil with sufficient depth of water that all boats passing the waters of the river may come right in to shore. The Florida East Coast R.R. runs in the "bay" the way the bay passes through the town and gives an excellent means for rail transportation. The harbor is used for an extensive domestic trade, which probably is the only place that has commerce in both sea and land. Here flourish the orange, grapefruit, lemon, and all other semi-tropical fruits and groves in perfection.

HEALTHY CONDITIONS AND CLIMATE

In healthfulness, Eau Gallie is unsurpassed; no matter in what disease you may suffer, you find no less a cure here. A dry, health-giving climate on a tropical land. The pure

all take flowers from earlier than being healthy and pleasure to her people that beautiful and
every day in each year. The most important climate in the United States is appropriate here
or changing with. An ideal location for an ideal area.

Protein-based drainage and optimal conditions for city coverage, in response to many
years required, as water flows freely from the ground with sufficient pressure. Protein-based
drainage and good weather conditions provide all possibilities of the evening process can be
avoided by. Rainfall is accompanied by optimal times, green and that health, some young
grass are being planted, and all are a thriving condition.

WORKING AND COLLECTIVE

A good quality school and high school. These should represent from those in reality
—the National Research, the Organization and the Missouri Report. The report shows
as well as the Kansas Catholic Church have more representation through in school facilities.

SPORTS, GARDENS AND FARMS

To the extent of the law, however, of the law, grass, garden and farm land in the country is
the best. Like Washington, the water and health care of the St. John's River, and the water
and of the river. It is a good quality commercial concern the East Valley River with the idea of the
state of the river, after a period of many thousand years, some of the very best land will be
adaptable, after which can be grown, mostly every product of the important ones.

Many young government functions are being made in this section. The driving settlement of America has sprung up here miles west of town.

TRANSPORTATION.

All roads over the Florida East Coast Railway stop at Fort Collins to get off passengers; all local and most of the through trains make this a regular stopping point. The Collins has the only open connection with the Indian River on the F. E. C. Railway, and all freight trains receive and discharge freight at the railroad wharf, within the company's pier of large freight boats. Four delivery boat lines operate from this point. The Inland Coastal Canal and Transportation Company have boats running regularly between Jacksonville and this place and intermediate points. Their wharf and warehouse is at the foot of South Street, where they have an agent. Cape's Boat Line runs a daily boat between this city and Cocoa, touching at all intermediate points. Cape's Boat Line, on the Indian River, runs a boat daily between this point and Vero, carrying the highest class mail, freight and passengers, stopping at all points on Merritt's Island, as high as on the mainland. Cape's Mail Boat Line, on the Banana River, makes three trips per week from this point to Avon, by way of Crescent, carrying the mail, freight and passengers. The Collins is used as a general stopping and transportation center.

WHAT NATURE HAS DONE.

With a tropical land almost has been laid upon this little city many things that have been withheld from other less favored localities.

The first bridge has been upon the entire East Coast of Florida. The Bay Center Bridge crosses the Indian River, from a large landlocked deep water harbor where many yachtsmen spend the winter season with their yachts, and from which a number of smaller rivers branch out to deep. Nature has been beneficial to the production of beautiful study spots so much appreciated by every citizen, but doubtless in a land of perpetual sunshine there the world has not, with its beautiful displays of long Spanish moss, groves in the winter a year like one often beheld even in tropical Florida. Nature has been provided for man's well being with an abundant supply of the game of game quacking water, which quacks with wherever that noblest of all sports of man that has been handed down—"The City of America Water," such will still find many thousands of gullies each day, and with such a time as someone possibly gets into the water with a construction of the ground, one gives in sufficient to ensure it over the top of the highest buildings.

WHAT MAN HAS DONE.

Build several miles of land bridges across against all-weather electric light in tunnel and on the water. The United States Government maintains a light house on the entrance to the harbor, making a safe harbor to come in the night as well as in the day time. Man has built a quality and one knows how things were done, one structural people, the number being limited to the water system. Bay Center is the winter home of the Kennedy Military Institute, which covers two or three hundred and fifty acres for the winter. Good schools, churches and American people always welcome all strangers to our town.

FISHING AND HUNTING

Have the delights of the Great Western Lake and Marsh. As no place on the East Coast of Florida is found a greater variety of salt and fresh water fish than can be gotten right here. With boat docks and the water so close upon, no place affords a greater supply. Fishing is good all the year, with an exceptionally dependable supply of fresh and salt water fish, deephead, trout, and all the best kinds of fish. Ducks, turkeys and quail are still found in greater numbers in the surrounding woods. Ducks by the thousands are here in the winter season. A great man's paradise.

BOATING AND WATER SPORTS

What open miles of the finest water country in the world for yachts and launches. An excellent landlocked harbor and the East Galois River for small boats. Thirty minutes to the ocean beach, where ocean bathing is enjoyed by many parties monthly in the season. East Galois can boast of about one hundred launches and boats of all kinds—and people may now successfully be taken upon the water to the fishing season.

OUR FUTURE

No place has a brighter prospect for the future. We are rapidly developing along all lines, and in the near future East Galois will be a popular winter resort, ranking with the best resorts on the coast. A steady growth and solid development will accomplish this.

In using this booklet in order to get advertising matter quickly before the public, the newly organized Eau Gallie Commercial Club realizes that it does not fully set forth the attractions of the city, as many improvements have been made since its publication and many views were left out at the time of publication. Notably views of the Kentucky Military Institute, the Southland Hotel and some of the beautiful scenic views about the city.

Two marked improvements are the handsome cement block moving picture theatre and the two-story cement block Rogers building. The harbor has recently been deepened.

If you want to live in one of the highest, healthiest and most attractive places on the East Coast of Florida, come to Eau Gallie.
