

1 Improved **forage varieties** have **2.5** biomass than their local controls times higher

2 Improved **leguminous forages** increase milk by **39%**

3 Improved **leguminous forages** increase manure by **42%**

4 When **forages** were **integrated/intercropped** with food crops,

a) **Soil loss** almost halved

b) **soil organic carbon** increased by around **10%**

c) **grain yields** increased by **60%**

Tropical forages can deliver multiple benefits in Sub-Saharan Africa
