# CONCLUSIONS

- Prolonged smokers lose a decade of life
- Cessation by age 40 (and preferably earlier) avoids 90% of the excess risk of continued smoking
- Tobacco is a big cause of poverty and tobacco control reduces poverty
- A tripling of the excise tax on cigarettes worldwide would cut consumption by 1/3 and avoid ~200 M deaths

# Global survival to age 70 years

- at 1970 rates: 40% male, 50% female
- at 2010 rates: 60% male, 70% female

 at 2030 rates: 75% male, 80% female?
 (proposed "Sustainable development goal" of 40% cut in death rates in 2030 vs 2010

# World mortality trends, 1970-2010: risks of dying in selected age ranges

Lines give trends from 1970\* (left) to 2010 (circles•)

\* Mean, 1965-69 & 1970-74

# Global deaths: approximate totals for selected causes

# Ebola in West Africa total deaths in 2015/16 ~10,000

Malaria (mostly <5 years)</th>~10,000Smoking~100,000Vascular disease <70 years</td>~200,000

Deaths per week

# World, 2015 and 2030: Deaths before age 70/year

Age range	<b>Deaths per year</b>		
	2015	<b>2030</b> (at 2010 rates)	
0-49	~16 M	~22 M	
50-69	~14 M	~22 M	
	M = Million		

Untied Nations, 2017

# Large gaps in mortality evidence

- 48 million infants are not registered each year (~ 40%)
- **38 million** deaths are not registered (2/3 of all deaths globally)
- 85 countries have zero or unreliable cause of death information
  - an additional 52 countries have low-quality data

# Nationwide Mortality Studies: Indian Million Death Study (MDS)

- 1. Visit 1.4 M homes ("true snapshot" of India) in the "SRS" with a recent death & ask standard questions **and** get a local language narrative (*adapted* WHO tool)
- 2. 900 non-medical surveyors (now electronic entry + GPS)
- Web-based double coding by 400 doctors (guidelines, anonymously reconciled + adjudicated + strict quality control)
- Study all diseases, work with RGI/census dept, keep costs <\$1 per home
- 5. To date: ~0.8M deaths

Statistical Alliance for Vital Events (SAVE) to expand to Sierra Leone, Ethiopia, Mozambique and elsewhere

Gomes et al, Health Affairs, 2017

# INDIA: 1.3 M vascular disease deaths at ages 30-69 years in 2015 <u>MEN</u>

- Ischemic heart :0.58M
  - 73% had prior history
- Stroke: 0.20M

# <u>WOMEN</u>

- Ischemic heart: 0.27M
  - 73% had prior history
- Stroke: 0.15

Peaths from: heart failure (50,000), Rheumatic (10,000)

# Mexican smoking patterns age 15+

<u>Group</u>	<u>% M / F</u>	<u>No (millions)</u>
Current smoker	25 / 8	14
Ex-smoker	21/9	12
Never	54 / 83	49

About 49 billion cigarettes produced or about 2/per adult per day, vs US (about 5/adult/day)
 Early age of onset (most smokers start by age 20)
 Compare to ex-smoking rates of 30-40% in UK and Canada

Rising rates in young? (each 10% increase, will reduce overall life expectancy by 1 year)

# High and low burden lung cancer mortality (males), Mexican states, 2001-13

# Low Specific Excise taxes

# BIG and SMART taxes: importance of excise tax

- Greater reliance on **specific tobacco excises** will:
  - Reduce gap in prices between high and low priced cigarette brands (ad valorum increases gap)
  - Produce more stable, predictable stream of cigarette excise tax revenues
  - Have greater impact on cigarette smoking
  - More easily counter smuggling
- India example: higher taxes on shorter, cheaper cigarettes have narrowed top/bottom price difference from 4 fold to 1.6 fold, BUT BIGGER increases needed

# Objections to higher tobacco taxes

- Job losses: In most economies, no net impact (money not spent on tobacco is spent on other goods and services)
- **Revenue loss:** "Laffer curve"- revenue declines not seen in practice nearly anywhere
- Hurts the poor: poor more price responsive, and gain more of the health benefits than the rich
- **Smuggling:** legitimate concern but consumption falls, revenue increases even with smuggling, and can counter with labels with tax stamp, smart labels, and coordination

# Social inequalities in male mortality in 1996 from smoking (shaded) and any cause

# **CANADA:** Risk of a 35-year-old MAN dying by age 69 from smoking (shaded) or from any cause (shaded+white), 1950-2015

### Mortality decline in the poorest and richest quintile of Ontario men ages 30-69, all causes and smoking 1992 to 2012

CGHR under prep

## **Background:**

- 13 diverse low and middle income countries
  - Lower middle income countries: India, Bangladesh, Indonesia, Philippines, Vietnam and Armenia
  - O Upper middle income countries: China, Mexico, Turkey, Brazil, Colombia, Thailand and Chile
- About 2B males of which and consisting of 500M are smokers
- 400M live below poverty line i.e. US\$ 1.9/day (PPP adjusted)
- Only 27% in LMICs and up to 97% in UMICs have UHC
- Their average out of pocket is 45% of the total expenditure

60% in LMICs and 30% in UMICs

# Men averting impoverishments and catastrophic healthcare spending with 50% price increase in 7 countries

GTEC, BMJ 2018

# **United States**

### Distribution of marginal taxes and health benefits by SES group

# **Global smuggling estimates**

# Canada Sharply Reduced Taxes in 1993

A tripling of excise tax in every country would reduce consumption by 1/3 and avoid ~200M deaths this century (and at least 2 M in Mexico)

## Example of South Asia: 1.8 B people, 30% adult men and 4% adult women currently smoke

- 140 M current and future smokers <35</li>
- 100 M current smokers >35
- A 1/3 reduction would avoid ~35-45 M deaths
  - 25-35 M deaths in smokers <35
  - ~10 M deaths in smokers > 35

# Plain packaging (Australia) and pictorial warning labels (Canada)

### WARNING TOBACCO USE Can Make You Impotent

Cigarettes may cause sexual impotence due to decreased blood flow to the penis. This can prevent you from having an erection.

Health Canada.

# CONCLUSIONS

- Prolonged smokers lose a decade of life
- Cessation by age 40 (and preferably earlier) avoids 90% of the excess risk of continued smoking
- Tobacco is a big cause of poverty and tobacco control reduces poverty
- A tripling of the excise tax on cigarettes worldwide would cut consumption by 1/3 and avoid ~200 M deaths
