Dear **Sukri Rahman**,

We have reached a decision regarding your submission to The ICBSA 2018 Proceeding, "Evaluation of Serum IgA Antibodies to Epstein-Barr Virus Early and Viral Capsid Antigens in Nasopharyngeal Carcinoma".

Our decision is to **Accept with major revision and further review**. Below are some comments and questions from the reviewers.

=====
Reviewer 1 :

This manuscript provided an important finding about NPC, however, although this research dealt with humans, the authors did not clearly describe the ethical clearance issued for this research. Moreover, the information about sex, age etc of the patients/participants in this research were lack. The author also should extensively discuss about the plausible use of this finding in NPC diagnose.

Please revise it accordingly the comments as written in the manuscript

=====
Reviewer 2 :

The idea of the paper is interesting. The paper is readable and has good structure but the results presentation still can be improved with additional clinicopathology data and relationship between marker concentration and cancer stage or characteristics.

=====
The reviewed articles from both of reviewers are attached. Please revised the manuscript in the publisher (KnE) template (<https://knepublishing.com/index.php/index/forAuthors>) and send back the revised manuscript by 2-weeks upon email acceptance.

Thank you.
