**Sousei expressed by two kanji
(Chinese characters)
written by Hiro Yamamoto*

Dear Colleagues,

In October 2015, Professor Maria Staykova at The John Curtin College of Medicine, Biology and Environment, Australian National University, Canberra, Australia sent to me a verse entitled *Brain* created by child from fourth class:

*With the brain man thinks that thinks.
Moreover the brain is used for headache.
Located in the head, behind the nose.
When someone sneezes, it drips.
The brain is very sensitive organ.
For this reason people use it rarely.*

In December 2015, Professor Hiroshi Yamamoto at Department of Biochemistry and Vascular Biology, Kanazawa University, Kanazawa, Japan wrote to me:

*Dear George,
I wish you health, happiness and something fantastic in 2016.
Enclosed is my hope for this year - it's called „Sousei“, meaning „live together“.*
Hiro*

I immediately replied:

*Hiro, after the wishes for health, your „Sousei“ - to live together in mutual understanding – is the most important message to all people in the world. Because:
Brain and heart are very sensitive organs.
For this reason people should use them more often - together.*

George, BHF-ly yours

George N. Chaldakov
