**2019**

**NUMERICAL ANALYSIS OF TBM TUNNEL BEHAVIOUR AND SUPPORT  
UNDER HIGH STRESS ROCK MASSES IN PAHANG-SELANGOR RAW  
WATER TRANSFER TUNNEL**

**by**

**HEYAM HUSSEIN SHAALAN**

**Thesis submitted in fulfillment of the  
requirements for the degree of  
Doctor of Philosophy**

**March 2019**

## ACKNOWLEDGEMENT

First of all, I would like to express my deepest appreciation to Assc. Prof. Dr. Mohd Ashraf Mohamad Ismail, my supervisor for his excellent guidance and advices throughout the process of this study. He helped me to improve my skills and permanently provided me with precious guidance, recommendations and suggestions.

I would like to thank the School of Civil Engineering, University Sains Malayisa, for providing me with the easy access of Rocscience and Plaxis Programs. I want also to thank Mr. Ahmad Halmi, Mr. Abdul Muluk Tajudin, Mr. Mohd Mazlan Kamis and also all the friendly staff in the School of Civil Engineering.

A deep gratitude I would like to present to Miss Lim Xiao Phin who has helped me with the software operation and installation. My special thank is extended to Mrs. Romziah Azit my schoolmate for her help to provide me with the required field data of my case study.

I would like to dedicate this thesis work to the memory of my father, Hussein Shaalan, I miss him every day. You left fingerprints of grace on our lives. You shan't be forgotten. Love, thanks and gratitude to my mother and brothers for all they have done for me throughout my life.

Furthermore, I want to thank my uncle Prof. Adil Hassan for his encouragement and support throughout my study in Malaysia. I have also to thank my lovely husband and best friend Marwan for been there when I need him. Last but important, my sweet, precious daughter, Zaynep, I dedicate this thesis work to you with love.

 <b>CHAPTER ONE - INTRODUCTION</b>	
1.1 Background	1
1.2 Problem Statement	3
1.3 Objectives	6
1.4 Scope of work	8
1.5 Research Significance	10
1.6 Thesis outline	11
 <b>CHAPTER TWO - LITERATURE REVIEW</b>	
2.1 Introduction	13
2.2 Tunnelling under high overburden stresses	15
2.2.1 In-situ stresses	17

2.2.2	In-situ stress measurement	19
2.2.2(a)	Flat jack method	21
2.2.2(b)	Overcoring method	22
2.2.2(c)	Hydraulic fracturing	23
2.2.3	Constitutive models of rock mass	25
2.2.3(a)	Generalized Hoek-Brown criterion	26
2.2.3(b)	Mohr-Coulomb criterion	31
2.3	Granitic rock	33
2.3.1	Weathered profile of granitic rock	34
2.4	Rock brittle failure around tunnels	36
2.4.1	Overstressing in deep rock tunnels	41
2.5	Estimation of rock brittle failure around underground openings	43
2.5.1	Empirical approach	43
2.5.2	Numerical modelling of rock brittle failure	45
2.6	Stability of underground excavations in overstressing rock mass	49
2.6.1	Rock support systems	51
2.6.2	Estimating the required rock support	51
2.6.2(a)	Rock quality designation index (RQD)	52
2.6.2(b)	The RMR system	52
2.6.2(c)	Rock tunnelling quality index, Q-system	53
2.6.3	Support systems for overstressed rock masses	55
2.6.3(a)	Rock bolts	58
2.6.3(b)	Wire mesh	60
2.6.3(c)	Cable lacing	61

2.6.3(d)	Shotcrete lining	62
2.6.4	Time-dependent behaviour of shotcrete material	67
2.6.4(a)	Modelling the shotcrete lining behaviour	68
2.6.5	Shotcrete constitutive model	71
2.6.5(a)	Introduction	71
2.6.5(b)	Model formulation	72
2.6.5(c)	Yield surfaces	72
2.6.5(d)	Strain hardening/softening principles	74
2.6.5(e)	Time dependent stiffness and strength	76
2.6.5(f)	Creep and shrinkage	79
2.7	Summary	80

### **CHAPTER THREE - RESEARCH METHODOLOGY**

3.1	Introduction	82
3.2	Project description	85
3.2.1	Geological conditions of the study area	86
3.2.2	Field data investigation	88
3.2.2(a)	Rock mass properties	89
3.2.2(b)	In-situ stress measurements	90
3.2.2(c)	Rock mass classification	92
3.2.2(d)	Tunnel support system	94
3.2.3	Tunnelling in overstressing rock mass	96
3.2.3(a)	Overstressing assessment	98
3.3	Numerical modelling	100

3.3.1	Tunnel excavation process	103
3.3.2	Brittle failure simulation	105
3.3.2(a)	Failure indicators	106
3.3.3	Influence of CSFH model strength parameters on the rock failure	106
3.3.3(a)	Peak cohesion and friction angle	107
3.3.3(b)	Residual cohesion and fiction angle	108
3.3.3(c)	Dilation angle	108
3.4	Evaluation of the Tunnel Stability	109
3.5	Time-dependent behaviour of the TBM tunnel lining	112
3.5.1	Numerical modelling	112
3.5.1(a)	Field stresses	114
3.5.1(b)	Tunnel excavation process	114
3.5.1(c)	Material parameters for the shotcrete model	115
3.5.1(d)	Shotcrete model validation	117
3.5.2	Elastic and Elasto-plastic behaviour of the shotcrete lining	118
3.5.3	SFRS lining behaviour with time	119
3.6	Effect of the Shotcrete model parameters	120
3.6.1	Time-dependent strength parameter	120
3.6.2	Time-dependent stiffness parameter	121
3.6.3	Effect of creep and shrinkage	121
3.6.4	Steel fibre effect	122
3.7	Effect of tunnel parameters	123
3.8	Summary	124

## CHAPTER FOUR – RESULTS AND DISCUSSION

4.1	Introduction	126
4.2	Evaluation of the rock overstressing	127
4.3	Numerical modelling of the rock failure	128
4.3.1	Elastic analysis	128
4.3.2	Elastic- Perfectly plastic model	130
4.3.3	Elastic-Brittle plastic model with (residual friction $m_r = 0$ and residual cohesion $s_r = 0.11$ )	131
4.3.4	Parametric analysis of the CSFH model parameters	132
4.3.4(a)	Effect of the peak friction angle	132
4.3.4(b)	Effect of the peak cohesion strength	133
4.3.4(c)	Effect of the residual friction angle	137
4.3.4(d)	Effect of the residual cohesion strength	139
4.3.4(e)	Effect of the dilation angle	141
4.3.4(f)	Optimized input parameters for the CSFH model	143
4.4	Stability evaluation of the TBM tunnel	149
4.4.1	Effect of the lining thickness	149
4.4.2	Effect of the tunnel size	151
4.4.3	Effect of fallout removal or scaling	154
4.4.4	Effect of the tunnel overburden	158
4.4.5	Summary	164
4.5	Numerical analysis of the TBM-2 tunnel lining	165
4.5.1	Model validation	166

4.5.2	Comparison study between the shotcrete model and elastic analysis	167
4.6	Time-dependent behaviour of the SFRS lining	170
4.6.1	Compressive strength of the SFRS lining	170
4.6.2	Elastic stiffness of the SFRS lining	172
4.6.3	Stresses of the SFRS lining	174
4.6.4	Vertical displacement in the SFRS lining	179
4.7	Effect of the shotcrete model input parameters	183
4.7.1	Time-dependent strength parameter	183
4.7.2	Time-dependent stiffness parameter	185
4.7.3	Effect of creep and shrinkage	186
4.7.4	Steel fibre effect	190
4.8	Effect of tunnel parameters	194
4.8.1	Effect of SFRS lining thickness	194
4.8.2	Effect of tunnel diameter	200
4.9	Summary	205
 <b>CHAPTER FIVE - CONCLUSION AND RECOMMENDATION</b>		
5.1	Conclusion	208
5.2	Recommendation for future works	214

SF	Safety factor
SWFS	Cohesion Weakening and Frictional Strengthening
UCS	Uniaxial compressive strength
HME	Hypothetical Modulus of Elasticity
ACI	American concrete institute
NATM	New Austrian tunnelling method
RQD	Rock Quality Designation
JH	Japan Highway Public Corporation
SCC	Self compacting concrete
J1, J2 and J3	Early shotcrete strength classes
GSI	Geological Strength Index

## LIST OF SYMBOLS

$m, s$	Hoek-Brown parameters
$m_r$	Residual friction
$s_r$	Residual cohesion
$\sigma_v$	Vertical stress
$\sigma_{h1}$	Maximum horizontal stress
$\sigma_{h2}$	Minimum horizontal stress
$\sigma_1$	Major principal stress
$\sigma_2$	Medium principal stress
$\sigma_3$	Minimum principal stress
H	Tunnel depth
$\gamma$	Unit weight
$k_0$	Coefficient of lateral stress
$\sigma'_1$	Maximum effective stresses
$\sigma'_3$	Minimum effective stresses at failure
$\sigma_{ci}$	Uniaxial compressive strength of the intact rock
$m_b$	Material constant

$m_i$	Material constant for the intact rock
$D$	Degree of disturbance
$c$	Cohesive strength
$\phi$	Angle of friction
$\tau$	Shear strength
$\sigma_n'$	Normal stress
$\sigma_t$	Rock tensile strength
$\sigma_{max}$	Maximum tangential stress
$\varepsilon$	Total strain
$\varepsilon^e$	Elastic strain
$\varepsilon^p$	Plastic strain
$\varepsilon^{cr}$	Creep strain
$\varepsilon^{shr}$	Shrinkage strain
$F_C$	Mohr-Coulomb yield surface
$F_t$	Rankine yield surface in the tensile zone
$f_{cy}$	Uniaxial compressive yield stress
$f_t$	Tensile strength yield stress
$H_C$	Normalised strain hardening/softening parameter
$\varepsilon_{cp}^p$	Plastic peak strain in uniaxial compression
